Fortinet NSE8_812復習攻略問題 & NSE8_812日本語受験攻略

一部の候補者は、自社のNSE8_812ソフトウェアテストシミュレーターを購入する場合があります。ソフトウェアをインストールできるパーソナルコンピューターの台数を尋ねられます。実際、コンピューターの数に制限はありません。したがって、NSE8_812ソフトウェアテストシミュレータを購入すると、同時にマルチユーザーをサポートします。無制限にコンピューターにインストールできます。あなたが訓練学校である場合、教師が気軽に発表して説明するのに適しています。優れたNSE8_812ソフトウェアテストシミュレータは合格率が高く、CertShikenは長期的な協力をお待ちしています。

Fortinet NSE 8 - Written Exam (NSE8_812) 認定 NSE8_812 試験問題 (Q62-Q67):

質問 # 62

Review the VPN configuration shown in the exhibit.

What is the Forward Error Correction behavior if the SD-WAN network traffic download is 500 Mbps and has 8% of packet loss in the environment?

- A. 3 redundant packet for every 5 base packets
- B. 3 redundant packet for every 9 base packets
- C. 2 redundant packet for every 8 base packets

- D. 1 redundant packet for every 10 base packets

正解: C

解説:

The FEC configuration in the exhibit specifies that if the packet loss is greater than 10%, then the FEC mapping will be 8 base packets and 2 redundant packets. The download bandwidth of 500 Mbps is not greater than 950 Mbps, so the FEC mapping is not overridden by the bandwidth setting. Therefore, the FEC behavior will be 2 redundant packets for every 8 base packets.

Here is the explanation of the FEC mappings in the exhibit:

Packet loss greater than 10%: 8 base packets and 2 redundant packets.

Upload bandwidth greater than 950 Mbps: 9 base packets and 3 redundant packets.

The mappings are matched from top to bottom, so the first mapping that matches the conditions will be used. In this case, the first mapping matches because the packet loss is greater than 10%. Therefore, the FEC behavior will be 2 redundant packets for every 8 base packets.

質問 # 63

Refer to the exhibit.

A customer has deployed a FortiGate 200F high-availability (HA) cluster that contains a TPM chip. The exhibit shows output from the FortiGate CLI session where the administrator enabled TPM.

Following these actions, the administrator immediately notices that both FortiGate high availability (HA) status and FortiManager status for the FortiGate are negatively impacted.

What are the two reasons for this behavior? (Choose two.)

- A. The private-data-encryption key entered on the primary did not match the value that the TPM expected.
- B. TPM functionality is not yet compatible with FortiGate HA.
- C. The FortiGate has not finished the auto-update process to synchronize the new configuration to FortiManager yet.
- **D. The administrator needs to manually enter the hex private data encryption key in FortiManager.**
- **E. Configuration for TPM is not synchronized between FortiGate HA cluster members.**

正解: D、E

解説:

<https://docs.fortinet.com/document/fortimanager/7.4.2/administration-guide/30332/verifying-devices-with-private-data-encryption-enabled>

質問 # 64

Refer to the exhibit, which shows a Branch1 configuration and routing table.

In the SD-WAN implicit rule, you do not want the traffic load balance for the overlay interface when all members are available.

In this scenario, which configuration change will meet this requirement?

- **A. Configure the priority in each overlay member to 10.**
- B. Configure the cost in each overlay member to 10.
- C. Change the load-balance-mode to source-ip-based.
- D. Create a new static route with the internet sdwan-zone only

正解: A

解説:

The default load balancing mode for the SD-WAN implicit rule is source IP based. This means that traffic will be load balanced evenly between the overlay members, regardless of the member's priority.

To prevent traffic from being load balanced, you can configure the priority of each overlay member to 10.

This will make the member ineligible for load balancing.

The other options are not correct. Changing the load balancing mode to source-IP based will still result in traffic being load

balanced. Creating a new static route with the internet sdwan-zone only will not affect the load balancing of the overlay interface.

Configuring the cost in each overlay member to 10 will also not affect the load balancing, as the cost is only used when the implicit rule cannot find a match for the destination IP address.

<https://docs.fortinet.com/document/fortigate/6.4.0/sd-wan-deployment-for-mssps/775385/defining-interface-members>

質問 # 65

Refer to the exhibit, which shows a FortiGate configuration snippet.

A customer in Costa Rica has a FortiGate with SD-WAN configured to use a VPN connection to the United States to browse the internet using a public IP from that country. They would like to enable the SD-WAN rule using a webhook.

Which configuration must be added to the FortiGate, and which type of HTTP request must be used to accomplish this? (Choose two.)

- A. ☐
- B. ☒
- C. ☐
- D. ☒

正解: B、D

質問 # 66

Refer to the exhibit.

A customer wants FortiClient EMS configured to deploy to 1500 endpoints. The deployment will be integrated with FortiOS and there is an Active Directory server.

Given the configuration shown in the exhibit, which two statements about the installation are correct?

(Choose two.)

- A. A client can be eligible for multiple enabled configurations on the EMS server, and one will be chosen based on first priority
- B. If no client update time is specified on EMS, the user will be able to choose the time of installation if they wish to delay.
- C. You must use Standard or Enterprise SQL Server rather than the included SQL Server Express
- D. The Windows clients only require "File and Printer Sharing" allowed and the rest is handled by Active Directory group policy
- E. You can only deploy initial installations to Windows clients.

正解: A、E

解説:

* A is correct because if no client update time is specified on EMS, the user will be able to choose the time of installation if they wish to delay. This is because the FortiClient EMS server will not force the installation on the client.

* E is correct because the Windows clients only require "File and Printer Sharing" allowed and the rest is handled by Active Directory group policy. This is because the Active Directory group policy will configure the Windows clients to automatically install FortiClient and the FortiClient EMS server will only need to push the initial configuration to the clients.

The other options are incorrect. Option B is incorrect because a client can only be eligible for one enabled configuration on the EMS server. Option C is incorrect because you can deploy initial installations to both Windows and macOS clients. Option D is incorrect because you can use the included SQL Server Express to deploy FortiClient EMS.
