

Free PDF Quiz SAP - C-DBADM-2601 - The Best Reliable SAP Certified - Database Administrator - SAP HANA Dumps Questions

SAP C-
S4CSV-2208 SAP Certified Application Associate - SAP S/4HANA Cloud (public) - Service Implementation 2
confidence to take the exam? It doesn't matter that you can use our 2Pass4sure dumps.

SAP Certified Application Associate - SAP S/4HANA Cloud (public) - Service Implementation Sample Questions (Q31-Q36):

NEW QUESTION # 31

You want to use a product proposal in a service order. Which actions support this requirement?

Note: There are 2 correct answers to this question.

- A. You create an equipment as a reference object and assign in to the service order.
- B. You create a bill of material (BOM), representing the components that can be selected in the service order.
- C. You activate the product proposal functionality in the item category used in the service order.
- D. You add the required service contract as a reference document to the service order on header level.

Answer: C

NEW QUESTION # 32

Data Migration

53 of 80

What are characteristics of the SAP S/4HANA Migration Cockpit?

Note: There are 2 correct answers to this question.

- A. Mapping source values to SAP S/4HANA target values
- B. Combining the staging and file approaches into one migration project
- C. Guidance and simulation of the migration process
- D. Extensibility using the Legacy System Migration Workbench (LSMW)

Answer: A,C

NEW QUESTION # 33

What is a feature that is available in the SAP S/4HANA Cloud system once scope item Procurement for Service Management (3NI) has been activated?

- A. A service order line item can create a purchase order directly, skipping the purchase requisition document.
- B. Goods receipts for purchase orders can be posted that update costs in a service order at line item level.
- C. A service order line item can create a purchase contract directly, skipping the purchase order document.
- D. Goods receipts for service order line items can be posted, updating costs in the purchase order sent to a vendor.

As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into our C-DBADM-2601 actual exam. Our experts expertise about C-DBADM-2601 training materials is unquestionable considering their long-time research and compile. I believe that no one can know the C-DBADM-2601 Exam Questions better than them. And they always keep a close eye on the changes of the content and displays of the C-DBADM-2601 study guide.

In this era of the latest technology, we should incorporate interesting facts, figures, visual graphics, and other tools that can help people read the SAP Certified - Database Administrator - SAP HANA (C-DBADM-2601) exam questions with interest. Prep4SureReview uses pictures that are related to the SAP Certified - Database Administrator - SAP HANA (C-DBADM-2601) certification exam and can even add some charts, and graphs that show the numerical values.

Using SAP C-DBADM-2601 Dumps, Improve Your Exam Skills

Our C-DBADM-2601 Study Guide is famous for its instant download, we will send you the downloading link to you once we receive your payment, and you can down right now. Besides the C-DBADM-2601 study guide is verified by the professionals, so we can ensure that the quality of it. We also have free update, you just need to receive the latest version in your email address. If you

don't have it, you can check in your junk mail or you can contact us.

SAP Certified - Database Administrator - SAP HANA Sample Questions (Q191-Q196):

NEW QUESTION # 191

A regional healthcare supply wholesaler runs SAP HANA for distribution analytics. SAP HANA cockpit shows the database as available, but the operations dashboard displays normal response time while a workload review shows a short queue increase during invoice analytics processing. Users reported a delay during the same interval. The support lead suggests increasing response-time thresholds because the dashboard did not show a severe issue.

The constraint is that the administrator must explain the delay using consistent monitoring evidence before changing thresholds. The next invoice analytics cycle must remain observable without masking the symptom.

Which action best supports correct troubleshooting?

- A. Ignore the workload queue increase because the operations dashboard showed normal response time.
- B. Increase response-time thresholds so minor delays no longer appear as operational concerns.
- C. Restart SAP HANA before the next invoice analytics cycle to reset both response-time and queue measurements.
- **D. Compare the dashboard interval with workload queue evidence, validate the timing relationship, and investigate the queue source before changing thresholds.**

Answer: D

Explanation:

Feedback:

This addresses the monitoring correlation layer. Aligning dashboard timing with queue evidence and investigating the queue source connects user symptom, workload behavior, monitoring interpretation, and any later configuration decision.

NEW QUESTION # 192

CHALLENGE 3 - Cloud Planning Evidence Separation

The business sponsor wants one readiness statement covering first close sign-off and future SAP HANA Cloud reporting transition. The current close systems have backup and monitoring evidence, while the cloud database has provisioning evidence only. Which action best supports accurate planning?

- A. Combine all evidence into one readiness statement to simplify sponsor review.
- B. Use cloud provisioning as proof that the modernization workstream is ready for reporting.
- **C. Separate first close readiness from cloud transition readiness in the decision package.**
- D. Delay first close sign-off until SAP HANA Cloud has the same reporting workload.

Answer: C

Explanation:

Feedback:

The decision package should separate first close readiness from cloud transition readiness. The evidence supports different lifecycle decisions and should not be merged into one conclusion.

NEW QUESTION # 193

CHALLENGE 1 - Plant Wave Configuration Evidence Alignment

The rollout coordinator wants to approve the next plant wave because the reporting outputs look consistent at a high level. The administration team has not confirmed whether the upgraded pilot system and newly installed wave database have comparable configuration records. Which decision best supports rollout readiness?

- A. Approve the wave because output consistency is the strongest evidence of database readiness.
- **B. Confirm comparable configuration records before using the reporting outputs for release approval.**
- C. Use the SAP HANA Cloud provisioning record to complete the missing pilot system evidence.
- D. Approve the wave and document configuration differences only if users report data delays.

Answer: B

Explanation:

Feedback:

Comparable configuration records should be confirmed before reporting outputs support release approval. The scenario requires evidence that the systems were evaluated under documented database states.

NEW QUESTION # 194

A regional nonprofit services provider uses SAP HANA for daily service utilization reporting. SAP HANA cockpit shows that a memory-related alert rule is triggered during the early reporting window, but the operations mailbox does not receive the expected notification. The database remains available, and dashboard users do not report failures. During review, the administrator notices that the alert appears in the monitoring view, but the notification assignment used by the operations team was not confirmed after a recent administration cleanup.

The constraint is that the administrator must restore reliable alert handling before the next reporting window. The team needs proof that monitoring detection and notification delivery are both working, not only that the alert is visible in cockpit.

Which action best addresses the alert handling gap?

- A. Restart the database so alert rules and notification assignments are reloaded during the next startup cycle.
- B. Close the alert because SAP HANA cockpit already displays it and the database remains available for reporting users.
- C. Increase the alert threshold so the memory-related event occurs less often during the reporting window.
- D. Verify the notification assignment for the triggered alert, correct the missing assignment, and validate that a new alert event reaches operations.

Answer: D

Explanation:

Feedback:

This acts at the alert routing layer where detection and notification must be connected. Correcting the assignment and validating delivery confirms that monitoring recognition, notification binding, execution, and operational evidence are aligned.

NEW QUESTION # 195

A regional specialty foods company is rehearsing a phased move from SAP HANA on-premises to SAP HANA Cloud. The migration transfer completes, and database explorer can query the cloud target. During validation, the administrator finds that the cloud-side backup review was performed before the imported content was available, while monitoring review was performed after import. The project lead wants approval because both checks appear in the workbook.

The constraint is that the migration wave must prove target administration readiness after the migrated state exists. The team needs repeatable validation evidence for later waves, not a checklist that mixes pre-import and post-import states.

What should the administrator recommend?

- A. Repeat the target-side backup review after import, confirm monitoring evidence for the same migrated state, and approve only if both pass.
- B. Defer backup review until after production cutover because monitoring was already validated after import.
- C. Approve the rehearsal because both backup review and monitoring review are present in the validation workbook.
- D. Repeat only the data transfer because the timing mismatch indicates that the imported content may not have reached the cloud target.

Answer: A

Explanation:

Feedback:

This corrects the validation timing dependency at the target administration layer. Repeating backup review after import and confirming monitoring against the same migrated state aligns transfer completion, target operations, resilience evidence, and repeatable approval criteria.

NEW QUESTION # 196

.....

There are free demos giving you basic framework of C-DBADM-2601 Training Materials. All are orderly arranged in our C-DBADM-2601 practice materials. After all high-quality demos rest with high quality C-DBADM-2601 preparation materials, you can feel relieved with help from them. Though the free demos are a small part of the exam braindumps, they contain the represent

questions for you to know its accuracy and good quality.
