

Nutanix NCP-CN Related Certifications | NCP-CN Reliable Braindumps Files

P.S. Free 2026 Nutanix NCP-CN dumps are available on Google Drive shared by Real4exams: https://drive.google.com/open?id=10toNo2uuHx3NvAk_vJ7fzR_3UX9J8H6L

The NCP-CN vce braindumps of our Real4exams contain questions and correct answers and detailed answer explanations and analysis, which apply to any level of candidates. Our IT experts has studied Nutanix real exam for long time and created professional study guide. So you will pass the test with high rate If you practice the NCP-CN Dumps latest seriously and skillfully.

By overcoming your mistakes before the actual Nutanix NCP-CN exam, you can avoid making those same errors during the Nutanix Certified Professional - Cloud Native v6.10 (NCP-CN) real test. With customizable NCP-CN practice tests, you can adjust the duration and quantity of NCP-CN Practice Questions. This self-assessment NCP-CN exam display your marks, helping you improve your performance while tracking your progress.

NCP-CN Reliable Braindumps Files, NCP-CN Training Materials

We stipulate the quality and accuracy of NCP-CN exam questions every year for your prospective dream. And our experts team keep close eyes on the upfront message that can help you deal with the new question points emerging during your simulation exercise of NCP-CN practice materials. So instead of being seduced by the prospect of financial reward solely, we consider more to the interest and favor of our customers. By our customers' high praise, we will do better on our NCP-CN exam braindumps!

Nutanix NCP-CN Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Conduct NKP Fleet Management: This section tests the abilities of platform administrators and cloud operations engineers in managing multiple clusters as a fleet. It focuses on configuring workspaces to organize clusters, deploying workload clusters within these workspaces, and attaching or detaching clusters as needed. Additionally, candidates must be able to configure projects for workload segmentation and manage platform applications that support the overall NKP environment.
Topic 2	<ul style="list-style-type: none"> Prepare the Environment for an NKP Deployment: This section of the exam measures the skills of infrastructure engineers and cloud administrators and covers the initial setup tasks needed for NKP deployment. Candidates must demonstrate the ability to seed a private container registry, create a bootstrap Kubernetes cluster, and determine license tiers suitable for clusters. They also need to prepare a bastion host for secure access, build machine images or prepare nodes for deployment, and gather all necessary information to build a cluster on the target cloud or on-premises provider.

Topic 3	<ul style="list-style-type: none"> • Manage Building an NKP Cluster: This section evaluates the skills of Kubernetes administrators and platform engineers in customizing and deploying NKP clusters. Candidates must show proficiency in tailoring cluster configurations to meet specific requirements and deploying Kommander, the management platform, while applying the appropriate licenses to enable cluster features and management capabilities.
Topic 4	<ul style="list-style-type: none"> • Perform Day 2 Operations: This part assesses the expertise of site reliability engineers and cluster operators in ongoing cluster management tasks after deployment. It includes configuring authentication and authorization mechanisms, setting up logging systems, and implementing cluster backup and recovery procedures. Candidates also need to demonstrate skills in monitoring cluster performance and health, configuring autoscaling to handle workload changes, and performing lifecycle management functions such as upgrades and maintenance.

Nutanix Certified Professional - Cloud Native v6.10 Sample Questions (Q61-Q66):

NEW QUESTION # 61

A company recently deployed NKP. A Platform Engineer was asked to attach the existing Amazon EKS. A workspace and project were created accordingly, and resource requirements were met. What does the engineer need to do first to prepare the EKS clusters?

- A. Create a service account with cluster-admin permissions.
- B. Deploy cert-manager in the EKS clusters.
- C. Configure HAProxy to get connected to EKS clusters.
- D. Configure a ConfigMap according to EKS configuration.

Answer: A

NEW QUESTION # 62

An infrastructure team has configured a Backup Storage Location on an existing AWS bucket and created a backup named testbackup. What command can the team use to view the backup?

- A. `kubectl get backupstoragelocations -n ${WORKSPACE_NAMESPACE} -o yaml`
- B. `velero backup describe aws-velero-testbackup`
- C. `kubectl get backupstoragelocations -n ${testbackup} -o yaml`
- D. `velero backup describe testbackup`

Answer: D

NEW QUESTION # 63

A Platform Engineer would like to install some NKP applications, but with a few modifications to the default configuration specs of some of the components. Additionally, Velero itself can be disabled, as the company already utilizes a different backup utility for Kubernetes.

Which procedure would the engineer utilize to accomplish these goals when deploying the applications?

- A. Execute `nkp config kommander`.
Disable Velero in the resulting output file and set the custom specs for the components to be modified.
Deploy the NKP applications using the `nkp install kommander` command, specifying the output file.
- B. Execute `nkp config kommander --init` to an output file.
Disable Velero in the output file and set the custom specs for the components to be modified.
Deploy the applications using the `helm install` command, specifying the output file.
- C. Execute `nkp install kommander --init` to an output file.
Set the custom specs for the components to be modified in the output file.
Deploy the NKP applications using the `nkp install kommander` command, specifying the output file.
Once the NKP applications install has completed, execute `kubectl delete hr -n kommander velero`.
- D. Execute `nkp install kommander --init` to an output file.
Disable Velero in the output file and set the custom specs for the components to be modified.

Deploy the NKP applications using the nkp install kommander command, specifying the output file.

Answer: D

Explanation:

The NKPA 6.10 documentation confirms that the proper method to customize application deployment (including disabling Velero) is by generating a configuration file using the nkp install kommander --init command. The file can then be modified to set custom specs and disable Velero, and finally deployed using the nkp install kommander command.

Exact extract:

"Generate a custom configuration file using --init, modify it for your specific environment (including disabling Velero), and deploy with the same nkp install kommander command." Reference:

NEW QUESTION # 64

A Platform Engineer for an organization does research in Antarctic

a. The engineer is preparing a bastion host for deploying NKP while the infrastructure is isolated. Which programs should the engineer ensure are installed on a bastion host before shipping the infrastructure?

- A. oc and az
- B. awscli and nkp
- C. oc and kubectl
- **D. kubectl and nkp**

Answer: D

NEW QUESTION # 65

A company recently deployed NKP. A Platform Engineer was asked to attach the existing Amazon EKS. A workspace and project were created accordingly, and resource requirements were met. What does the engineer need to do first to prepare the EKS clusters?

- **A. Create a service account with cluster-admin permissions.**
- B. Deploy cert-manager in the EKS clusters.
- C. Configure HAProxy to get connected to EKS clusters.
- D. Configure a ConfigMap according to EKS configuration.

Answer: A

Explanation:

Attaching an existing Amazon EKS cluster to NKP for fleet management involves integrating the cluster into NKP's management plane, which requires specific preparatory steps. The NKPA course outlines that the first step is to create a service account with cluster-admin permissions in the EKS cluster. This service account is used by NKP to authenticate and manage the cluster, enabling operations like monitoring, scaling, and application deployment.

The Nutanix Cloud Native (NCP-CN) 6.10 Study Guide explains: "To attach an external Kubernetes cluster, such as Amazon EKS, to NKP, a service account with cluster-admin role bindings must be created to allow NKP to interact with the cluster's API server." The service account is configured with a token that NKP uses to authenticate requests. The NKPA course provides detailed steps, including creating the service account, assigning the cluster-admin ClusterRole, and generating a token for NKP integration. This step is critical to ensure NKP has the necessary permissions to manage the EKS cluster.

Incorrect Options:

- * A. Configure a ConfigMap according to EKS configuration: While ConfigMaps may be used for specific configurations, they are not the first step for attaching an EKS cluster. The NKPA course prioritizes service account creation.
- * C. Configure HAProxy to get connected to EKS clusters: HAProxy is a load balancer, not required for attaching EKS clusters to NKP. EKS uses AWS-native load balancers, and NKP connects via the Kubernetes API.
- * D. Deploy cert-manager in the EKS clusters: Cert-manager is used for certificate management, not a prerequisite for attaching EKS clusters. The NKPA course does not list it as a required step.

NEW QUESTION # 66

.....

Candidates who become Nutanix NCP-CN certified demonstrate their worth in the Nutanix field. NCP-CN certification is proof of their competence and skills. This is a highly sought after credential and it makes career advancement easier for the candidate. To become Nutanix NCP-CN Certified, you must pass the Nutanix Certified Professional - Cloud Native v6.10 (NCP-CN) Exam. For this task, you need actual and updated NCP-CN Questions.
