# Examinations C_SAC_2501 Actual Questions, C_SAC_2501 Study Materials Review

Of course, when we review a qualifying exam, we can't be closed-door. We should pay attention to the new policies and information related to the test SAP certification. For the convenience of the users, the C_SAC_2501 study materials will be updated on the homepage and timely update the information related to the qualification examination. Annual qualification examination, although content broadly may be the same, but as the policy of each year, the corresponding examination pattern grading standards and hot spots will be changed, as a result, the C_SAC_2501 study materials can help users to spend the least time, you can know the test information directly what you care about on the learning platform that provided by us, let users save time and used their time in learning the new hot spot concerning about the knowledge content. It can be said that the C_SAC_2501 Study Materials greatly facilitates users, so that users cannot leave their homes to know the latest information. Trust us! I believe you will have a good experience when you use the C_SAC_2501 study materials, and you can get a good grade in the test SAP certification.

# SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q47-Q52):

**NEW QUESTION # 47**
What can you do with a multi action? Note: There are 2 correct answers to this question.

- A. Run allocation processes
- B. Run allocation data actions
- C. Import transaction data
- D. Approve data

**Answer: B,C**

**NEW QUESTION # 48**
Which calculation types include dynamic date options? Note: There are 2 correct answers to this Question.

- A. Restricted Measure
- B. Aggregation
- C. Date Difference
- D. Difference From

**Answer: A,D**

**NEW QUESTION # 49**
Your embedded dataset in SAP Analytics Cloud has columns for Country, Region, City, and Customer Name. You want to aggregate measures for these columns as a single column. What can you do?

- A. Create a group that includes the dimensions.
- B. Create a level-based hierarchy in the dataset.
- C. Convert the embedded dataset to a model.
- D. Create a parent-child hierarchy in the dataset.

**Answer: B**

Explanation:
To aggregate measures for columns such as Country, Region, City, and Customer Name as a single column in an embedded dataset, creating a level-based hierarchy is the most effective approach. This type of hierarchy allows you to define a multi-level structure that represents the logical relationship between different geographical entities and customer names. By doing so, you can easily perform aggregations and analyze data at various levels of detail, from the broadest level (e.g., Country) down to the most specific one (e.g., Customer Name).

SAP Analytics Cloud Help Documentation: Creating Hierarchies in Models
SAP Analytics Cloud User Guide: Data Modeling and Hierarchies

**NEW QUESTION # 50**
What are the available connection types in SAP Analytics Cloud? Note: There are 2 correct answers to this question.

- A. Import
- B. Cloud
- C. On-premise
- D. Live

**Answer: A,D**

Explanation:
SAP Analytics Cloud supports two primary types of data connections: Live Data Connection and Import Data Connection. Live Data Connection establishes a direct link to the data source, allowing real-time data access without replicating the data into SAP Analytics Cloud. This is ideal for scenarios where up-to-the-minute data is crucial, and data volume is large. On the other hand, Import Data Connection involves copying data from the source into SAP Analytics Cloud, which is suitable for scenarios where data doesn't change frequently, or there's a need for data transformation and enrichment within SAP Analytics Cloud.

**NEW QUESTION # 51**
To which story elements can you apply conditional formatting? Note: There are 2 correct answers to this question.

- A. Chart
- B. Lane
- C. Table
- D. Composite

**Answer: A,C**

Explanation:
In SAP Analytics Cloud stories, conditional formatting can be applied to Table and Chart elements. This feature allows users to visually highlight data points based on specific conditions, such as thresholds, ranges, or comparisons, making it easier to identify trends, outliers, or areas of interest within the data presented in tables and charts.
