## Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q37-Q42):

### NEW QUESTION # 37

Which Salesforce B2BCommerce object needs to have a record added when defining a new Subscriber Pages to be rendered in a CC Page?

- A. CC Subscriber Pages
- B. CC Storefront Association
- C. CC Page Sections
- D. CC Admin

**Answer: A**

**Explanation:**

The Salesforce B2B Commerce object that needs to have a record added when defining a new Subscriber Page to be rendered in a CC Page is CC Subscriber Pages. This is a custom object that stores information about the Subscriber Pages, such as the name, description, URL, and Visualforce page. To create a new Subscriber Page, the user needs to create a new record in this object and

specify the required fields. The user can then select the Subscriber Page from the CC Page Settings configuration in CCAdmin. Salesforce B2B Commerce and D2C Commerce Developer Guide,Subscriber Pages

### NEW QUESTION # 38

A developer is setting up a storefront from scratch. They need to create a storefront, push store sources, create buyer users, import products, and create and search index.

Which command allows the developer to accomplish this task?

- A. `sfdx commerce:store:create -store-name test-store`
- B. `sfdx commerce:store:quickstart:setup -definitionfile store-scratch-def.json`
- C. `sfdx commerce:store:quickstart:create -templatename 'b2c-lite-storefront'`
- D. `sfdx commerce:store:open -store-name test-store`

**Answer: B**

Explanation:

The `sfdx commerce:store:quickstart:setup` command allows the developer to set up a store from scratch using a definition file that specifies the store configuration. This command performs the following tasks:

Pushes the store sources to the scratch org

Creates a buyer user

Imports products

Creates a search index

Opens the store in a browser

The other options are not correct because:

A) `sfdx commerce:store:quickstart:create` only creates a community for the store, but does not perform the other tasks required to set up a store from scratch.

C) `sfdx commerce:store:create` creates and sets up a store, but does not use a definition file to specify the store configuration. Instead, it uses command-line flags to provide the store parameters.

D) `sfdx commerce:store:open` only opens an existing store in a browser, but does not create or set up a store from scratch.

store Commands

Build a B2B and B2B2C Commerce Store

### NEW QUESTION # 39

Which component can be used in other Salesforce Experience templates outside of B2B Commerce?

- A. Quick Order
- B. Results Layout
- C. Product Detail Data
- D. CMS Collection

**Answer: D**

Explanation:

In Salesforce Experience Cloud, components like CMS Collection and Results Layout are designed to be reusable across different Experience templates, not just limited to B2B Commerce. CMS Collection allows for the display of CMS content in a flexible and dynamic layout, while Results Layout can be used to present search or query results in a customizable format. Salesforce documentation on Experience Cloud components emphasizes the reusability and adaptability of these components across various templates and contexts.

### NEW QUESTION # 40

What is the recommended method for increasing the number of required autocomplete characters that are typed before autocomplete works?

- A. Override the autocomplete template and create and register a new handlebars helper.
- B. Override the `autoComplete.search_input.minLength` value in the `CCRZ.uiProperties` file
- C. Override and extend the `autoComplete` method in `cc_hk_Catalog`.
- D. Update the `...minLength` property in CC Admin, then build and activate a new cache.

**Answer: B**

Explanation:

The recommended method for increasing the number of required autocomplete characters that are typed before autocomplete works is to override the autoComplete.search\_input.minLength value in the CCRZ.uiProperties file. This file contains various properties that control the behavior and appearance of the user interface components. The autoComplete.search\_input.minLength property specifies the minimum number of characters that must be entered before the autocomplete feature is triggered. The default value is 3, but it can be changed to any desired value by overriding it in the CCRZ.uiProperties file. Salesforce B2B Commerce and D2C Commerce Developer Guide, UI Properties

#### NEW QUESTION # 41

What is the fastest route to setting up a B2B Commerce Store as a developer?

- A. Use sfdx setup scripts
- **B. Import a previously exported store archive**
- C. Set up B2B Commerce on Lightning Experience manually
- D. Create a new store in the Commerce app

**Answer: B**

Explanation:

The fastest route to setting up a B2B Commerce store as a developer is to use sfdx setup scripts. Sfdx setup scripts are scripts that use Salesforce CLI commands to automate the creation and configuration of a B2B Commerce store. The scripts can perform tasks such as creating scratch orgs, installing packages, importing data, assigning permissions, and deploying code. The scripts can save time and effort for developers who need to set up a B2B Commerce store quickly and easily. Setting up B2B Commerce on Lightning Experience manually is not the fastest route to setting up a B2B Commerce store, as it involves many steps and actions that can be tedious and error-prone. Creating a new store in the Commerce app is not the fastest route either, as it also requires manual configuration and customization of various settings and features. Importing a previously exported store archive is not the fastest route either, as it depends on the availability and quality of the store archive and may not reflect the latest changes or updates.
