CGOA latest dumps & free Linux Foundation CGOA dumps torrent - CGOA free braindumps

Developing your niche is very easy in the presence of the CGOA dumps. The credentials are not very difficult to achieve because

like CGOA the acclaimed vendors are highly successful in the industry. If you need a boost in your career, then PrepAwayTest is the site you have to opt for taking CGOA Certification exams. Some of the vital features of the CGOA dumps of PrepAwayTest are given below. CGOA dumps are the most verified and authentic braindumps that are used to pass the CGOA certification exam. The whole CGOA study material is approved by the expert.

Linux Foundation Certified GitOps Associate Sample Questions (Q12-Q17):

NEW QUESTION # 12

In the context of GitOps, what is the purpose of a State Store?

- A. To provide a system for storing the current state of an application.
- **B. To provide a system for storing immutable versions of Desired State declarations.**
- C. To provide a system for storing temporary state data during GitOps deployments.
- D. To provide a system for storing mutable versions of Desired State declarations.

Answer: B

Explanation:

A State Store in GitOps is the system of record where Desired State declarations are kept. It must be immutable and versioned to ensure full auditability, traceability, and rollback capabilities. Git itself is the most common State Store.

"The Desired State must be stored in a State Store that is versioned and immutable. This guarantees traceability and enables recovery by reverting to previous commits." Thus, the correct answer is D.

NEW QUESTION # 13

Which of the following statements best describes the relationship between DevOps and GitOps?

- A. DevOps and GitOps are two completely separate concepts with no relation to each other.
- B. DevOps and GitOps are competing methodologies, and organizations must choose one over the other.
- C. DevOps and GitOps are interchangeable terms used to describe the same concept and principles.
- **D. GitOps is a set of principles to guide modern DevOps in practice.**

Answer: D

Explanation:

GitOps is not a replacement for DevOps. Instead, it is an evolution and practical implementation of DevOps principles, using Git as the single source of truth and continuous reconciliation as the operational model.

"GitOps builds on the foundation of DevOps by providing a framework to put its principles into practice. It leverages Git and declarative reconciliation to realize DevOps goals." Thus, the best description of the relationship is B.

References: GitOps Related Practices (CNCF GitOps Working Group).

NEW QUESTION # 14

What does Pull Automatically refer to?

- A. A GET request to a relational database.
- B. Webhooks informing the system about new commits.
- C. It always refers to Git pull.
- **D. Accessing the Desired State from the State Store.**

Answer: D

Explanation:

The Pull Automatically GitOps principle refers to the way software agents continuously access the Desired State stored in the State Store (e.g., Git). Agents automatically pull the state from the repository and reconcile the system accordingly.

"Software agents automatically pull the desired state declarations from the source of truth (State Store) and continuously reconcile the system to match." Thus, the correct answer is D.

References: GitOps Principles (CNCF GitOps Working Group).

NEW QUESTION # 15

In the context of GitOps, what does Continuous mean?

- A. Reconciliation only happens once.
- **B. Reconciliation continues to happen.**
- C. Reconciliation happens only during instantiation.
- D. Reconciliation must happen instantaneously.

Answer: B

Explanation:

One of the four core GitOps principles is that the system must be Continuously Reconciled. This means reconciliation is not a one-time or on-demand process but happens constantly in the background, ensuring the actual system state remains aligned with the declared desired state.

"GitOps requires that reconciliation is continuous. Software agents continuously compare actual state against desired state and automatically reconcile differences." Thus, the correct answer is C.

References: GitOps Principles (CNCF GitOps Working Group), Principle 4: Continuously reconciled.

NEW QUESTION # 16

Which requirement of the GitOps principle declares that Desired State must be versioned?

- **A. The State Store must retain a complete version history.**
- B. The Desired State must be publicly accessible.
- C. The Desired State must not be publicly accessible.
- D. You must use Git in order to be compliant with this principle.

Answer: A

Explanation:

One of the GitOps principles is Versioned and Immutable, which requires that the Desired State is stored in a system that maintains a complete version history. This allows for auditing, traceability, and rollback.

"The Desired State must be stored in a versioned, immutable system. The State Store must retain a complete version history so changes can be audited and previous states can be restored." Thus, the correct answer is B.

References: GitOps Principles (CNCF GitOps Working Group), Principle 2: Versioned and Immutable.

NEW QUESTION # 17

.....

There is no denying that no exam is easy because it means a lot of consumption of time and effort. Especially for the upcoming CGOA exam, although a large number of people take the exam every year, only a part of them can pass. If you are also worried about the exam at this moment, please take a look at our CGOA Study Materials, whose content is carefully designed for the CGOA exam, rich question bank and answer to enable you to master all the test knowledge in a short period of time.
