After getting our Terraform-Associate-004 Exam Prep, you will not live under great stress during the Terraform-Associate-004 exam period. You will experience a pleasant and leisure study method with boomed success!

HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which of the following methods, used to provision resources into a public cloud, demonstrates the concept of infrastructure as code?

- A. A series of commands you enter into a public cloud console
- B. curl commands manually run from a terminal
- C. A sequence of REST requests you pass to a public cloud API endpoint Most Voted
- D. A script that contains a series of public cloud CLI commands

Answer: D

Explanation:

The concept of infrastructure as code (IaC) is to define and manage infrastructure using code, rather than manual processes or GUI tools. A script that contains a series of public cloud CLI commands is an example of IaC, because it uses code to provision resources into a public cloud. The other options are not examples of IaC, because they involve manual or interactive actions, such as running curl commands, sending REST requests, or entering commands into a console. References = [Introduction to Infrastructure as Code with Terraform] and [Infrastructure as Code]

NEW QUESTION # 61

You created infrastructure outside the Terraform workflow that you now want to manage using Terraform. Which command brings the infrastructure into Terraform state?

- A. `terraform import`
- B. `terraform get`
- C. `terraform init`
- D. `terraform refresh`

Answer: A

Explanation:

The `terraform import` command allows Terraform to take existing infrastructure and bring it under Terraform's management.

A (`terraform get`) is incorrect because it is used to fetch modules.

B (`terraform refresh`) is incorrect because it only updates Terraform's state to match the infrastructure but does not import resources.

D (`terraform init`) is incorrect because it only initializes the Terraform working directory.

NEW QUESTION # 62

What is a key benefit of the Terraform state file?

- A. A state file is a source of truth for resources provisioned with Terraform
- B. A state file is the desired state expressed by the Terraform code files
- C. A state file can schedule recurring infrastructure tasks
- D. A state file is a source of truth for resources provisioned with a public cloud console

Answer: A

Explanation:

This is a key benefit of the Terraform state file, as it stores and tracks the metadata and attributes of the resources that are managed by Terraform, and allows Terraform to compare the current state with the desired state expressed by your configuration files.

NEW QUESTION # 63

terraform plan updates your state file.

- A. True
- B. False

Answer: B

Explanation:

The terraform plan command does not update the state file. Instead, it reads the current state and the configuration files to determine what changes would be made to bring the real-world infrastructure into the desired state defined in the configuration. The plan operation is a read-only operation and does not modify the state or the infrastructure. It is the terraform apply command that actually applies changes and updates the state file. References = Terraform's official guidelines and documentation clarify the purpose of the terraform plan command, highlighting its role in preparing and showing an execution plan without making any changes to the actual state or infrastructure .

NEW QUESTION # 64

Which of the following is not a valid source path for specifying a module?

- A. source - "hashicorp/consul/aws"
- B. source - "github.com/hashicorp/examplePref-0.8M"
- C. source = "./module?version=v1.6.0"
- D. source - "./module"

Answer: C

Explanation:

Terraform modules are referenced by specifying a source location. This location can be a URL or a file path. However, specifying query parameters such as ?version=v1.6.0 directly within the source path is not a valid or supported method for specifying a module version in Terraform. Instead, version constraints are specified using the version argument within the module block, not as part of the source string. References = This clarification is based on Terraform's official documentation regarding module usage, which outlines the correct methods for specifying module sources and versions.

NEW QUESTION # 65

.....

The version of APP and PC of our Terraform-Associate-004 exam torrent is also popular. They can simulate real operation of test environment and users can test Terraform-Associate-004 test prep in mock exam in limited time.
