Quiz HP - HPE6-A86 - Efficient HPE Aruba Networking Switching Associate Exam Exam Overview

There is no doubt that you can certainly understand every important knowledge point without difficulty and pass the exam successfully with our HPE6-A86 learning prep as long as you follow the information that we provide to you. After you purchase our HPE6-A86 test materials, then our staff will immediately send our HPE6-A86 training guide to you in a few minutes. Please believe that we dare to guarantee that you will pass the HPE6-A86 exam for sure because we have enough confidence in our HPE6-A86 preparation torrent.

HPE Aruba Networking Switching Associate Exam Sample Questions (Q124-Q129):

NEW QUESTION # 124

A Network Technician is hardening an AOS-CX switch. The security policy requires that only authorized devices are allowed to connect to the network. The technician wants to implement a security feature that authenticates a device based on its hardware address before allowing it on the network. Which security feature directly meets this requirement?

- A. Captive Portal authentication
- B. Local User Role authentication
- C. 802.1X authentication
- D. MAC authentication

Answer: D

NEW QUESTION # 125

What is the purpose of a routing table in IP networking, and how does it influence the forwarding of data packets?

- A. It stores information about the next-hop routers
- B. It determines the best path for forwarding data packets
- C. It regulates the flow of traffic within a network segment
- D. It defines the subnet masks for connected networks

Answer: B,C

NEW QUESTION # 126

A Solutions Architect is designing a network management strategy for a growing campus network that uses a mix of HPE Aruba Networking CX 6300 and 8325 switches. The primary goals are to ensure consistent configuration, simplify administrative tasks, and provide proactive monitoring.

The architect has decided to use Aruba Central for cloud-based management. To adhere to best practices, they must configure secure administrative access and ensure that all switches can reliably communicate with Central.

Which set of tasks should the architect perform to establish a secure and effective management foundation for the switches? (Select all that apply.)

- A. Ensure all switches have DNS servers configured that can resolve ``device.arubanetworks.com``.
- B. Rely exclusively on Zero Touch Provisioning (ZTP) for all configuration and disable all local CLI and web UI access.
- C. Disable the ``aruba-central`` service on all switches until they are physically deployed in their final location.
- D. Create a static route on each switch pointing to the Aruba Central IP address to guarantee connectivity.
- E. Configure a local administrator account with a strong password on each switch as a fallback access method.
- F. Configure ``ntp server pool.ntp.org`` on all switches to ensure accurate time synchronization for logging and certificate validation.

Answer: A,E,F

NEW QUESTION # 127

A Network Operator is troubleshooting a user's report of being unable to access a specific external website, ``corp.example.com``.

The operator can successfully ping the website's IP address (198.51.100.10) from the user's gateway switch, confirming basic Layer 3 reachability.

The operator now suspects a DNS resolution issue.

The operator needs a command that will:

1. Use the switch's configured DNS servers.
2. Attempt to resolve the hostname ``corp.example.com`` to an IP address.
3. Display the resulting IP address if successful.

Which of the following commands is the correct tool to perform this DNS validation task directly from the switch?

- A. ``show dns client``
- B. ``ping corp.example.com``
- C. ``show hosts``
- D. ``traceroute corp.example.com``

Answer: B

NEW QUESTION # 128

A network administrator is responsible for maintaining a large number of HPE Aruba Networking CX switches. As a best practice, they regularly update the switch firmware. The administrator has downloaded a new firmware image, ``FL.10.09.1020.swi``, to a TFTP server. The goal is to update the secondary image partition on a switch without interrupting the currently running primary image. Which set of commands will achieve this administrative task? (Select all that apply.)

- A. ``copy tftp://192.168.1.100/FL.10.09.1020.swi secondary``
- B. ``show images``
- C. ``write memory``
- D. ``boot system secondary``
- E. ``copy tftp://192.168.1.100/FL.10.09.1020.swi primary``
