Appian Associate Developer Sample Questions (Q28-Q33):

NEW QUESTION # 28

Where can you read the release notes for each Appian version?

- A. Appian Academy
- B. Appian Community AppMarket
- C. Appian Documentation

Answer: C

NEW QUESTION # 29

Match each scenario to the correct relationship type in your data model design.

Note: Each relationship type will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

The screenshot shows an 'Answer Area' with three scenarios, each with a dropdown menu for relationship types. The scenarios are: 1. 'You have a product with basic fields and an additional detailed product description with all the technical details that is regularly updated.' with options 'One-to-many', 'One-to-one', and 'Many-to-many'. 2. 'You have many employees on multiple projects.' with options 'One-to-many', 'One-to-one', and 'Many-to-many'. 3. 'You have an order with order items.' with options 'One-to-many', 'One-to-one', and 'Many-to-many'. A large 'appian' watermark is visible across the center.

Answer:

Explanation:

This screenshot is identical to the previous one but with the correct relationship types selected in each dropdown menu: 'One-to-many' for the first scenario, 'Many-to-many' for the second, and 'One-to-many' for the third. A large 'appian' watermark is visible across the center.

Explanation:

* " You have a product with basic fields and an additional detailed product description with all the technical details that is regularly updated. " - One-to-many

* " You have many employees on multiple projects. " - Many-to-many

* " You have an order with order items. " - One-to-many

* A one-to-many relationship is used when a single record from one table (product) is associated with multiple records in another table (product descriptions).

* A many-to-many relationship exists when multiple records from one table (employees) are associated with multiple records from another table (projects).

* An order with order items also represents a one-to-many relationship where one order can have multiple order items.

NEW QUESTION # 30

Which two groups can be set within Application Properties? (Choose two.)

- A. Users Groups
- B. Designers Groups
- C. Developers Groups
- D. Administrators Groups

Answer: A,D

Explanation:

Within Application Properties in Appian, you can set two groups: Administrators Groups and Users Groups. The Administrators Group is responsible for managing and configuring the application, while the Users Group is designated for end-users who interact with the application's functionalities.

NEW QUESTION # 31

You need to implement a new column on an existing database table. This table, its Custom Data Types (CDT), and data store entity are currently in use by an Appian application.

How should you implement this change?

Note: To answer, move all steps from the Options list to the Answer List area and arrange them in the correct order.

Answer:

Explanation:
