CompTIA A+ Certification Exam: Core 1 Sample Questions (Q241-Q246):

NEW QUESTION # 241

A technician recently reinstalled a previously virtualized application directly to a user's computer.
Now, the application is not launching. Which of the following did the technician most likely do to cause this issue?

- A. Installed the software on the base operating system.
- B. Installed the application with administrator rights.
- C. Installed the wrong license type.
- D. Reset the user's application virtualization session.

Answer: A

Explanation:

If an application was previously running in a virtualized environment and is not launching after being installed directly on the base operating system, it's possible that the technician did not account for dependencies or configurations specific to the virtualized environment that are not present or are incompatible with the base operating system. This mismatch can prevent the application from launching properly.

NEW QUESTION # 242

A user visits the desk to report that a smartphone takes more than a day to fully charge. The user has already tested multiple wall outlets and swapped the charging cable, but the results are the same. Which of the following should the technician do FIRST?

- A. Verify the power rating of the charger.
- B. Complete a factory reset of the phone
- C. Check that all missing smartphone OS updates are applied.
- D. Ensure all unnecessary connectivity features are disabled.

Answer: A

Explanation:
A smartphone that takes more than a day to fully charge may be due to a charger that is not powerful enough. The technician should verify that the charger is rated for the smartphone's battery capacity and that it is providing the correct voltage and amperage123.
