# Salesforce Mule-101 Exam | Mule-101 Exam Materials - Help you Pass Mule-101 Training Kit Once

In today's highly developed and toughly competitive society, professional certificates are playing crucial importance for individuals like Mule-101. The choices of useful Mule-101 study materials have become increasingly various which serve to convey information about the Mule-101 Exam. And we have become a famous brand for we have engaged in this career. If you choose our Mule-101 practice engine, you will find the shortcut to the success.

Salesforce Mule-101 Exam Syllabus Topics:

Topic	Details
Topic 1	• Recognize and interpret essential integration concepts and terminology: This domain focuses on foundational concepts including cloud service models, infrastructure types, networking protocols, data formats, security principles, and API classifications.
Topic 2	• Recognize common integration problems, use cases, and technical solutions: This domain examines integration scenarios, compares legacy and modern approaches, and guides selection of appropriate integration technologies for business problems.
Topic 3	• Explain the common technical complexities and patterns in integration development: This domain explores interaction patterns, composition patterns, API specifications, observability approaches, and deployment • application architecture comparisons.
Topic 4	• Describe the components and benefits of Anypoint Platform for system integration: This domain covers Anypoint Platform's integration components, connectors, runtime • control planes, deployment options, and reusable Exchange assets.

Mule-101 Training Kit, Mule-101 Exam Question

ExamsTorrent field is leaping up day by day and more people are pursuing it as a career than ever. Due to these reasons, candidates find it difficult to land their dream job and often face difficulty in finding the right career opportunities. But to overcome this issue, the Mule-101 Exam is introduced by Salesforce that provides candidates with a sustainable platform to examine their true capabilities and surf through their desired opportunities.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q27-Q32):

NEW QUESTION # 27
An API client makes an HTTP request to an API gateway with an Accept header containing the value "application/json".

- A. status('healthy')
- B. status>healthy</status>
- C. {"status": "healthy"}
- D. status: healthy

Answer: C

Explanation:
Content Negotiation: The HTTP Accept header is used by the client to tell the server what media type (format) it expects in the response4444.
application/json: This MIME type explicitly requests JSON (JavaScript Object Notation).
Analyzing the Options:
(B) {"status": "healthy"} is valid JSON format (Key-Value pair wrapped in braces).
(C) status>healthy</status> is XML.
(A) is YAML or Plain Text.

NEW QUESTION # 28
According to MuleSoft, a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system is an example of which message exchange pattern? 6(Note: The options are partially truncated in the PDF, but based on the provided text "A. Multicast" 7 and standard MuleSoft certification context, the correct pattern is Request-Response).

- A. Request-Response
- B. Acknowledge Only
- C. Fire-and-Forget
- D. Multicast

Answer: A

Explanation:
Comprehensive and Detailed Explanation:
Request-Response: The HTTP protocol is inherently synchronous and follows the Request-Response pattern. The client sends a request (the GET command) and waits for the server to process the query and send back the data (the 200 OK response).
Synchronous Nature: The "Synchronous" keyword in the question is the biggest clue. The client processing is blocked or expects an immediate return of data before proceeding.
Why "Multicast" is incorrect: Multicast is a one-to-many pattern (usually asynchronous). It involves sending one message to multiple receivers (like a topic subscription), which contradicts the question's scenario of getting a "record from a single system." 8

NEW QUESTION # 29
Which type of communication is managed by a service mesh in a microservices architecture?

- A. Communication between microservices runtime administrators
- B. Communication between microservices developers
- C. Communication between microservices
- D. Communication between trading partner services

Answer: C

Explanation:
Service Mesh Definition: A service mesh is a dedicated infrastructure layer for handling service-to-service communication.
East-West Traffic: It is specifically designed to manage East-West traffic, which is the network traffic flowing inside the data center or cluster between different microservices.
Capabilities: It handles things like mutual TLS (mTLS) for security, retries, load balancing, and traffic control between these services without requiring changes to the application code itself.

NEW QUESTION # 30

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.

- A. Anypoint Studio
- B. Anypoint Monitoring
- C. Audit Logging
- D. Mule Stack Traces

Answer: C

Explanation:
Audit Logging: This feature in Anypoint Platform provides a searchable history of actions performed within the platform. It is designed specifically for governance and security compliance.
What it tracks: It records "who did what and when." This includes changes to:
User permissions and roles (Access Management).
Environment configurations.
API Manager policies.
Why others are incorrect:
Anypoint Monitoring: Focuses on application performance (CPU, Memory, API analytics), not administrative actions.
Stack Traces: Are used for debugging runtime application errors, not auditing user permissions.

NEW QUESTION # 31
According to the Internet Engineering Task Force (IETF), which supporting protocol does File Transfer Protocol (FTP) use for reliable communication?

- A. Lightweight Directory Access Protocol (LDAP)
- B. Transmission Control Protocol (TCP)
- C. Hypertext Transfer Protocol (HTTP)
- D. Secure Sockets Layer (SSL)

Answer: B

Explanation:
TCP (Transmission Control Protocol): FTP is an application-layer protocol that relies on TCP at the transport layer to ensure reliable, ordered, and error-checked delivery of a stream of bytes12.
Mechanism: FTP establishes two TCP connections: one for control (commands) and one for data transfer.
Why others are incorrect:
UDP: Is unreliable (best effort).
HTTP: Is an alternative application protocol, not the transport layer for FTP.
LDAP: Is for directories.

NEW QUESTION # 32
......

It is acknowledged that there are numerous Mule-101 learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many materials by yourself. But since you have clicked into this website for Mule-101 practice materials you need not to worry about that at all because our company is especially here for you to solve this problem. With our Mule-101 Exam Questions, you will pass your exam just in one go for we are the most professional team in this career for over ten years.
