Detailed NSK300 Answers - NSK300 Valid Test Preparation

Exam   :   **NSK300**

Title   :   Netskope Certified Cloud
             Security Architect Exam

https://www.passcert.com/NSK300.html

BONUS!!! Download part of PassLeaderVCE NSK300 dumps for free: https://drive.google.com/open?id=18wPrBztBHVXSbDT0995ZgCXVCGo7Eh9u

Our NSK300 pracice prep boosts varied functions to be convenient for you to master the NSK300 training materials and get a good preparation for the exam and they include the self-learning function, the self-assessment function, the function to stimulate the exam and the timing function. We provide 24-hours online on NSK300 Guide prep customer service and the long-distance professional personnel assistance to for the client. If clients have any problems about our study materialse and we will solve the client's NSK300 problems as quickly as we can.

If you buy the NSK300 study materials of us, we ensure you to pass the exam. Since the NSK300 study materials have the quality and the accuracy, and it will help you pass exam just one time. Buying NSK300 exam dumps are pass guaranteed and money back guaranteed for the failure. Furthermore, we choose international confirmation third party for payment for the NSK300 Exam Dumps, therefore we can ensure you the safety of your account and your money. The refund money will return to your payment account.

Three User-Friendly Formats With Real Netskope NSK300 Questions

Everybody hopes he or she is a successful man or woman no matter in his or her social life or in his or her career. Thus owning an

authorized and significant NSK300 certificate is very important for them because it proves that he or she boosts practical abilities and profound knowledge in some certain area. Passing NSK300 Certification can help they be successful and if you are one of them please buy our NSK300 guide torrent because they can help you pass the NSK300 exam easily and successfully.

Netskope NSK300 Exam Syllabus Topics:

Topic	Details
Topic 1	• Netskope Platform Implementation: This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.
Topic 2	• Netskope Platform Management: This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.
Topic 3	• Cloud Security Solutions: This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.
Topic 4	• Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.
Topic 5	• Netskope Platform Monitoring: This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.

Netskope Certified Cloud Security Architect Sample Questions (Q18-Q23):

NEW QUESTION # 18
Review the exhibit.

AcmeCorp has recently begun using Microsoft 365. The organization is concerned that employees will start using third-party non-AcmeCorp OneDrive instances to store company dat a. The CISO asks you to use Netskope to create a policy that ensures that no data is being uploaded to non-AcmeCorp instances of OneDrive.
Referring to the exhibit, which two policies would accomplish this posture? (Choose two.)

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A,D

Explanation:
To ensure that no data is uploaded to non-AcmeCorp instances of OneDrive, the policies that would accomplish this are:
Policy B: This policy allows traffic only for AcmeCorp's OneDrive and blocks all other Microsoft 365 Suite traffic. It ensures that data is not uploaded to non-AcmeCorp OneDrive instances by restricting access to only the corporate instance of OneDrive.

Policy C: This policy allows traffic for AcmeCorp's Microsoft 365 Suite but blocks all other OneDrive for Business traffic. It achieves the same outcome by permitting corporate suite usage while preventing uploads to any OneDrive for Business instances that are not part of AcmeCorp.

These policies are designed to provide granular control over the data flow, ensuring that company data remains within the corporate environment and is not transferred to external or personal storage solutions.

NEW QUESTION # 19

You want to enable the Netskope Client to automatically determine whether it is on-premises or off-premises.

Which two options in the Netskope Ul would you use to accomplish this task? (Choose two.)

- A. the New Exception option in the Traffic Steering options of the Ul
- B. the All Traffic option in the Steering Configuration section of the Ul
- C. the Enable Dynamic Steering option in the Steering Configuration section of the Ul
- D. the On Premises Detection option under the Client Configuration section of the Ul

Answer: C,D

Explanation:

To enable the Netskope Client to automatically determine whether it is on-premises or off-premises, you can use the following options in the Netskope UI:

* Enable Dynamic Steering:

* This option is available in the Steering Configuration section of the UI.

* By enabling dynamic steering, the Netskope Client can intelligently determine the appropriate data plane (on-premises or cloud) based on the user's location and network conditions.

* It ensures that traffic is directed to the optimal data plane for improved performance and security.

Reference: Netskope Documentation on Dynamic Steering

On Premises Detection:

This option is available under the Client Configuration section of the UI.

By configuring on-premises detection, the Netskope Client can identify whether it is connected to the local network (on-premises) or accessing resources from outside (off-premises).

It helps in applying relevant policies and steering traffic accordingly.

Reference: Netskope Documentation on Client Configuration

NEW QUESTION # 20

A recent report states that users are using non-sanctioned Cloud Storage platforms to share data Your CISO asks you for a list of aggregated users, applications, and instance IDs to increase security posture Which Netskope tool would be used to obtain this data?

- A. Cloud Confidence Index (CCI)
- B. Applications in Skope IT
- C. Advanced Analytics
- D. Behavior Analytics

Answer: C

Explanation:

To obtain a list of aggregated users, applications, and instance IDs, especially when dealing with non-sanctioned Cloud Storage platforms, the Advanced Analytics (A) tool within Netskope would be used. Advanced Analytics provides in-depth visibility into cloud app usage and activities. It allows security teams to create detailed reports and dashboards that can help identify risks and ensure compliance with company policies by analyzing user behavior, application access, and data movement across the organization1.

NEW QUESTION # 21

Your client is an NG-SWG customer. They are going to use the Explicit Proxy over Tunnel (EPoT) steering method. They have a specific list of domains that they do not want to steer to the Netskope Cloud.

What would accomplish this task"

- A. Use an SSL decryption policy.
- B. Create a real-time policy with a bypass action.
- C. Define exception domains in the PAC file.
- D. Define exceptions in the Netskope steering configuration

Answer: C

Explanation:
To accomplish the task of not steering specific domains to the Netskope Cloud while using the Explicit Proxy over Tunnel (EPoT) steering method, you would define exception domains in the PAC file (A). This is because the PAC file is used to specify which domains should bypass the proxy and connect directly, thus allowing for granular control over the traffic that is steered to Netskope1.

NEW QUESTION # 22

You are building an architecture plan to roll out Netskope for on-premises devices. You determine that tunnels are the best way to achieve this task due to a lack of support for explicit proxy in some instances and IPsec is the right type of tunnel to achieve the desired security and steering.
What are three valid elements that you must consider when using IPsec tunnels in this scenario? (Choose three.)

- A. bandwidth considerations
- B. Netskope Client behavior when on-premises
- C. the categories to be blocked
- D. the impact of threat scanning performance
- E. cipher support on tunnel-initiating devices

Answer: A,D,E

Explanation:
When using IPsec tunnels, especially in the context of deploying Netskope for on-premises devices, several factors must be considered to ensure a secure and efficient architecture:
Cipher support on tunnel-initiating devices (A): It is crucial to ensure that the devices initiating the IPsec tunnels support the ciphers used by Netskope. This compatibility is necessary for establishing secure connections.
Bandwidth considerations (B): The bandwidth available for the IPsec tunnels will affect the data throughput and performance of the connection. Adequate bandwidth must be allocated to handle the expected traffic without causing bottlenecks.
The impact of threat scanning performance (D): The performance of threat scanning can be affected by the encryption and decryption processes in IPsec tunnels. It is important to consider how the threat scanning capabilities will perform under the additional load of encrypted traffic.
These elements are essential for the successful implementation of IPsec tunnels in a Netskope architecture plan for on-premises devices12.

NEW QUESTION # 23

......

As the most famous and popular NSK300 exam questions on the market, we have built a strict quality control system. The whole compilation process of the NSK300 study materials is normative. We have proof-readers to check all the contents. Usually, the NSK300 Actual Exam will go through many times' careful proofreading. Please trust us. We always attach great importance to quality of the NSK300practice braindumps.
