AP-222 Test Assessment & AP-222 Valid Dumps Questions

The Pass4SureQuiz is committed to ace the AP-222 exam preparation and success journey successfully in a short time period. To achieve this objective the Pass4SureQuiz is offering Public Sector Solutions Accredited Professional (AP-222) practice test questions with high-in-demand features. The main objective of Pass4SureQuiz Salesforce AP-222 Practice Test questions features to assist the AP-222 exam candidates with quick and complete Salesforce AP-222 exam preparation.

Salesforce Public Sector Solutions Accredited Professional Sample Questions (Q93-Q98):

NEW QUESTION # 93

A government agency charges license fees for small businesses. The agency uses Public Sector Solutions to automate the license application process and dynamically calculate the license fee (based on multiple parameters, ex: revenue, industry type, etc...) for a specific business customer. Which public sector tools should be leveraged for this use case?

- A. Application form using Omniscripts and embed the Business Rules Engine to derive the license fee in the process.
- B. Application form using Omniscripts and embed the license fee logic using triggered flows
- C. Application form using Omniscripts and embed the license fee logic using integration procedures
- D. Application form using Flows and embed the Business Rules Engine to derive the license fee in the process.

Answer: A

Explanation:

Application form using Omniscripts and embed the Business Rules Engine to derive the license fee in the process. This selection keeps the implementation declarative and within the intended Public Sector operating model.

The Core Concept Explained: Business Rules Engine externalizes decision logic from custom code. Expression Sets orchestrate

calculations and can call decision assets so policy thresholds remain maintainable by authorized business users.

Step-by-Step Technical Analysis: Identify the inputs that drive the decision, declare them as Expression Set resources, and use Decision Matrices or Decision Tables where business users must maintain rule thresholds. Execute representative samples before activation, then confirm the output and Decision Explainer history match the expected eligibility, fee, or prioritization result. Use OmniScripts for the application form and embed Business Rules Engine to derive the license fee.

Why the Incorrect Options Are Wrong: A may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer. B can orchestrate work, but it is not the preferred rule-decision asset for maintainable fee, eligibility, or prioritization logic. C can orchestrate work, but it is not the preferred rule-decision asset for maintainable fee, eligibility, or prioritization logic.

NEW QUESTION # 94

A customer has specific steps/tasks that need to be performed every time a new Business License Application comes in. The following actions must be completed: The applicant must upload an image of their driver's license. The license reviewer must perform a background check within five business/working days. The license reviewer must enter the background check results into an external system manually within two business days of completing the background check. The license reviewer must provide a recommendation to the approver to approve/reject the application & submit it for review. The license reviewer may add additional steps/tasks for a particular application as needed. Which statement is true regarding Action Plan Templates relative to the business requirements above?

- A. A document checklist item for an action plan template cannot be created.
- B. Action plans cannot have tasks with due dates dependent upon prior tasks within the action plan.
- C. An action plan template can be created for the business license application object, and a document checklist item for the image upload can be created.
- D. The reviewer users cannot create their own tasks within a predefined action plan template.

Answer: C

Explanation:

An action plan template can be created for the business license application object, and a document checklist item for the image.. This is the packaged route that keeps the process supportable, auditable, and aligned to the data model.

The Core Concept Explained: Action Plans standardize repeatable work. They package tasks, dependencies, due dates, and document checklist requirements so staff do not rely on memory or one-off manual steps.

Step-by-Step Technical Analysis: Start by defining the target object that owns the operational work. Build or select the Action Plan Template, add the required tasks or Document Checklist Items, publish the template, and then automate or guide its association to the live record. Test that owners, due dates, dependencies, and applicant-facing upload prompts behave correctly. Create an Action Plan Template for the Business License Application object and include a Document Checklist Item for the driver's license image.

Why the Incorrect Options Are Wrong: B does not meet the implementation-quality bar for security, scale, auditability, or maintainability in this scenario. C does not meet the implementation-quality bar for security, scale, auditability, or maintainability in this scenario. D does not meet the implementation-quality bar for security, scale, auditability, or maintainability in this scenario.

NEW QUESTION # 95

Bobahaven has purchased the Licenses, Permits, and Inspections modules of Salesforce Public Sector Solutions and wants to transform its constituents' experience by providing authenticated digital permit applications and self-service. Bobahaven's marketing team has provided branding guidelines and asset files, and the project sponsor has stressed that user experience is a high priority. The digital experience should be pixel-perfect. Which Experience Site template should the consultant select for building and deploying a pixel-perfect authenticated digital experience for Bobahaven's constituents?

- A. Select the BYO (Aura) template and deploy a mix of custom- built Lightning Components with standard components.
- B. Select the BYO (Lightning Web Runtime) template and deploy custom- built Lightning Components.
- C. Select the Help Center Experience Site template, and customise the theme.
- D. Select the Licenses and Permits Experience Site template, and customise the theme.

Answer: B

Explanation:

Select the BYO (Lightning Web Runtime) template and deploy custom- built Lightning Components. This is the packaged route that keeps the process supportable, auditable, and aligned to the data model.

The Core Concept Explained: Experience Cloud design is driven by persona, authentication, scale, and sharing. The wrong template or license can create unnecessary cost, weak security, or excessive customization.

Step-by-Step Technical Analysis: Begin with the external persona, authentication requirement, and transaction volume. Select the Experience Cloud license or template that matches that access pattern, then configure sharing sets, external OWD, site visibility, and page access. Finish by testing the experience as anonymous, authenticated, and internal users. Use the BYO Lightning Web Runtime template and deploy custom Lightning Web Components.

Why the Incorrect Options Are Wrong: A adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement. B adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement. C adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement.

NEW QUESTION # 96

A user called in for a status update on their application. In reviewing the application, the caseworker has come to find out that the application was incorrectly prioritized. The case worker's supervisor advised the case worker to check the decision log to see exactly why the application was prioritized the way it was. However, the caseworker cannot see the component even though the Administrator has confirmed it is on the page layout. What should the Administrator check for next?

- A. Verify that the case worker has the Rules Engine Runtime permission.
- B. Verify that the case worker has OmniStudio Admin permission.
- C. Verify that the case worker has OmniStudio User permission.
- D. Verify that the case worker has the Decision Explainer Permission set.

Answer: D

Explanation:

Verify that the case worker has the Decision Explainer Permission set. This is the packaged route that keeps the process supportable, auditable, and aligned to the data model.

The Core Concept Explained: Business Rules Engine externalizes decision logic from custom code. Expression Sets orchestrate calculations and can call decision assets so policy thresholds remain maintainable by authorized business users.

Step-by-Step Technical Analysis: Identify the inputs that drive the decision, declare them as Expression Set resources, and use Decision Matrices or Decision Tables where business users must maintain rule thresholds. Execute representative samples before activation, then confirm the output and Decision Explainer history match the expected eligibility, fee, or prioritization result. Assign or verify the Decision Explainer permission set for the user.

Why the Incorrect Options Are Wrong: A shifts the process onto Case even though the scenario is centered on application, license, permit, grant, or inspection records. B shifts the process onto Case even though the scenario is centered on application, license, permit, grant, or inspection records. C shifts the process onto Case even though the scenario is centered on application, license, permit, grant, or inspection records.

NEW QUESTION # 97

A government agency is planning a Public Sector Solutions implementation. What are three main constraints that government agencies often have in project implementation?

- A. Scope, Resources and Cost
- B. Scope, Tools and Cost
- C. Scope, Schedule and Cost
- D. Workshops, Schedule and Cost

Answer: C

Explanation:

Scope, schedule and cost are the three main constraints that government agencies often have in project implementation. Scope defines the goals, deliverables, and requirements of the project. Schedule defines the timeline, milestones, and dependencies of the project. Cost defines the budget, resources, and risks of the project. These three constraints are also known as the project management triangle or the triple constraint.
