What's more, part of that DumpsReview H12-841_V1.5 dumps now are free: <https://drive.google.com/open?id=1LDFuAGDhqPxo18JfUwUZVfZdhlmGk5vu>

In the case of studying with outdated HCIP-Datacom-Campus Network Planning and Deployment V1.5 (H12-841_V1.5) practice questions, you will fail and lose your resources. DumpsReview made an H12-841_V1.5 Questions for the students so that they don't get confused to prepare for H12-841_V1.5 Certification Exam successfully in a short time. DumpsReview has designed the real H12-841_V1.5 exam dumps after consulting many professionals and receiving positive feedback.

If you are new to our website, you can ask any questions about our H12-841_V1.5 study materials. Our workers are very familiar with our H12-841_V1.5 learning braindumps. So you will receive satisfactory answers. What is more, our after sales service is free of charge. So our H12-841_V1.5 Preparation exam really deserves your choice. Welcome to come to consult us. We are looking forward to your coming at any time.

H12-841_V1.5 Vce Files & H12-841_V1.5 Exam Collection

The simulation of the actual H12-841_V1.5 test helps you feel the real H12-841_V1.5 exam scenario, so you don't face anxiety while giving the final examination. You can even access your last test results, which help to realize your mistakes and try to avoid

them while taking the HCIP-Datacom-Campus Network Planning and Deployment V1.5 (H12-841_V1.5) certification test.

Huawei HCIP-Datacom-Campus Network Planning and Deployment V1.5 Sample Questions (Q289-Q294):

NEW QUESTION # 289

In Huawei's wide area network solution, for "low-latency services transmitted across regions (such as high-frequency transaction data)," which of the following technologies can "guarantee service transmission latency <50ms"?

- A. Business data is transmitted in parallel across multiple links, increasing latency fluctuations.
- B. SD-WAN low-latency leased line technology (select low-latency links and disable unnecessary protocol overhead)
- C. Reduce service transmission rate and decrease latency.
- D. Use a regular internet link for transmission, without latency optimization.

Answer: B

NEW QUESTION # 290

When OSPF is deployed on a wide area network (such as an inter-carrier link), which of the following configurations can improve the adaptability and stability of the OSPF network? (Multiple choice)

- A. Enable OSPF authentication (such as zone authentication to prevent fake LSA injection).
- B. Without configuring OSPF authentication, any device can access the OSPF domain.
- C. Using the default hello/dead times (10s/40s) is not suitable for wide area network latency.
- D. Divide OSPF into reasonable areas (e.g., divide cross-regional links into backbone areas Area 0).
- E. Adjust OSPF hello/dead times (e.g., change the hello time to 30 seconds to adapt to high latency in wide area networks).

Answer: A,D,E

NEW QUESTION # 291

(On a small- or medium-sized campus network deployed based on the Huawei CloudCampus Solution, if a single AP is used as the network egress and needs to be managed by iMaster NCE-Campus, in which of the following modes should the AP work?)

- A. Fit
- B. RU
- C. Cloud
- D. Fat

Answer: C

Explanation:

In the Huawei CloudCampus Solution, access points can operate in different modes depending on network size, architecture, and management requirements. For a small- or medium-sized campus network where a single AP is used as the network egress and must be centrally managed by iMaster NCE-Campus, the recommended operating mode is Cloud mode.

When an AP works in Cloud mode, it establishes a direct management connection with iMaster NCE-Campus through the cloud.

The AP can independently provide wireless access services while also performing gateway and egress functions, such as user traffic forwarding and policy enforcement. This eliminates the need to deploy a dedicated wireless AC or additional gateway devices, significantly simplifying network architecture and reducing deployment cost.

Fit mode APs rely on a local or centralized AC for control and therefore cannot independently function as a network egress.

RU mode is used only in Agile Distributed Wi-Fi scenarios and depends on a central AP, making it unsuitable for this scenario.

Fat mode APs can operate independently but lack deep integration with iMaster NCE-Campus for cloud-based centralized management and automated service provisioning.

HCIP Datacom Campus Network documentation highlights Cloud APs as the optimal choice for small and medium campuses that require simplified deployment, cloud-based management, and integrated gateway capabilities. Therefore, to meet both the management and egress requirements described, the AP should operate in Cloud mode.

Hence, the correct answer is C.

NEW QUESTION # 292

In an MPLS VPN network, which of the following descriptions conforms to the forwarding logic of the "MPLS label stack"?

- A. When a data packet carries multiple layers of tags, the device always processes the innermost tag first.
- B. When receiving data packets, the CE device must remove all MPLS labels before forwarding them.
- **C. The device forwards data packets based on the outer label, and then removes the outer label after forwarding.**
- D. The inner label is used for backbone network forwarding path identification, and the outer label is used for VPN instance identification.

Answer: C

NEW QUESTION # 293

(On a CloudCampus virtualized campus network, which of the following modes can be used by a fabric to connect to external networks? Choose all that apply.)

- A. Layer 2 exclusive egress
- **B. Layer 3 exclusive egress**
- **C. Layer 3 shared egress**
- **D. Layer 2 shared egress**

Answer: B,C,D

Explanation:

Comprehensive and Detailed 200 to 250 words of Explanation From HCIP Datacom Campus Network documents knowledge without any URL or Links:

CloudCampus virtualized campus networks support multiple fabric egress modes to connect VXLAN fabrics to external networks.

These modes determine how traffic exits the fabric and whether egress resources are shared among multiple virtual networks.

Layer 3 shared egress allows multiple VNs to share the same Layer 3 egress interface, improving resource utilization and simplifying external connectivity. Layer 3 exclusive egress dedicates an independent Layer 3 interface to a specific VN, providing stronger isolation and higher security.

Layer 2 shared egress enables multiple VNs to access an external Layer 2 network through a shared interface. This mode is commonly used when the external network does not support Layer 3 integration.

Layer 2 exclusive egress is not supported in the CloudCampus solution because Layer 2 resources are typically designed to be shared to optimize scalability and simplify deployment.

Therefore, the correct answers are A, C, and D.

NEW QUESTION # 294

.....

If you use the DumpsReview Huawei H12-841_V1.5 Study Materials, you can reduce the time and economic costs of the exam. It can help you to pass the exam successfully. Before you decide to buy our Huawei H12-841_V1.5 exam materials, you can download our free test questions, including the PDF version and the software version. If you need software versions please do not hesitate to obtain a copy from our customer service staff.
