### Get Free Updates For 1 year For Appian ACD201 Exam Questions

if you want to pass your ACD201 exam and get the certification in a short time, choosing the suitable ACD201 exam questions are very important for you. You must pay more attention to the study materials. In order to provide all customers with the suitable study materials, a lot of experts from our company designed the ACD201 Training Materials. We can promise that if you buy our products, it will be very easy for you to pass your ACD201 exam and get the certification.

### Appian Senior Developer Sample Questions (Q62-Q67):

#### NEW QUESTION # 62

Match each authentication type to the correct authentication characteristic description.

Note: Each description will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

**LDAP Authentication**  
Select a match:

<input type="checkbox"/>	Requires a username and password.
<input type="checkbox"/>	Allows for secure exchange of authentication information over multiple domains and environments.
<input type="checkbox"/>	Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
<input type="checkbox"/>	Redirects users to an external identity provider to establish single sign-on (SSO).

**Basic**  
Select a match:

<input type="checkbox"/>	Requires a username and password.
<input type="checkbox"/>	Allows for secure exchange of authentication information over multiple domains and environments.
<input type="checkbox"/>	Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
<input type="checkbox"/>	Redirects users to an external identity provider to establish single sign-on (SSO).

**OpenID Connect (OIDC)**  
Select a match:

<input type="checkbox"/>	Requires a username and password.
<input type="checkbox"/>	Allows for secure exchange of authentication information over multiple domains and environments.
<input type="checkbox"/>	Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
<input type="checkbox"/>	Redirects users to an external identity provider to establish single sign-on (SSO).

**SAML Authentication**  
Select a match:

<input type="checkbox"/>	Requires a username and password.
<input type="checkbox"/>	Allows for secure exchange of authentication information over multiple domains and environments.
<input type="checkbox"/>	Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
<input type="checkbox"/>	Redirects users to an external identity provider to establish single sign-on (SSO).

**Answer:**

**Explanation:**

#### LDAP Authentication

Select a match:

- Requires a username and password.
- Allows for secure exchange of authentication information over multiple domains and environments.
- Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
- Redirects users to an external identity provider to establish single sign-on (SSO).

#### Basic

Select a match:

- Requires a username and password.
- Allows for secure exchange of authentication information over multiple domains and environments.
- Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
- Redirects users to an external identity provider to establish single sign-on (SSO).

#### OpenID Connect (OIDC)

Select a match:

- Requires a username and password.
- Allows for secure exchange of authentication information over multiple domains and environments.
- Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
- Redirects users to an external identity provider to establish single sign-on (SSO).

#### SAML Authentication

Select a match:

- Requires a username and password.
- Allows for secure exchange of authentication information over multiple domains and environments.
- Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
- Redirects users to an external identity provider to establish single sign-on (SSO).

appian

#### LDAP Authentication

Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

#### Basic

Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

#### OpenID Connect (OIDC)

Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

#### SAML Authentication

Select a match:

Requires a username and password.
Allows for secure exchange of authentication information over multiple domains and environments.
Allows you to configure Appian to authenticate users against an external directory server, such as Microsoft Active Directory.
Redirects users to an external identity provider to establish single sign-on (SSO).

#### NEW QUESTION # 63

You need to implement a field-level audit functionality on the application data, and then display a log of the changes made over time to the users.

What should you do?

- A. Create Audit table(s) and create triggers on each transaction table to record modifications into the Audit table.
- B. Create Audit table(s) and create stored procedures on each transaction table to compare and save the modified data.
- C. Create utility process model(s) to insert new version of the modified data for the same record into the transaction tables on modification.

**Answer: A**

Explanation:

Creating audit tables and using triggers on each transaction table ensures that all field-level changes are automatically recorded at the database level, providing a reliable and consistent audit log for display to users.

#### NEW QUESTION # 64

You need to configure the security for the synced record type Case.

Your requirements are:

Only users in the "Archive Management" group can access cases in the "Archived" status.

Cases in the status "Deleted" are accessible to no one.

Users in the "All Users" group can already access the record.

What should you do?

- A. Create a new user filter to allow access if the user is in the "Archive Management" group while the case status is "Archived." "Configure a source filter to exclude all cases that are in the "Deleted" status.
- B. Create a new record-level security rule to allow access if the user is in the "Archive Management" group while the case status is "Archived." "Configure a source filter to exclude all cases that are in the "Deleted" status.
- C. Create a new user filter to allow access if the user is in the "Archive Management" group while the case status is "Archived." "Configure the record-level security to exclude all cases that are in the "Deleted" status

**Answer: B**

Explanation:

Creating a record-level security rule for "Archived" cases restricts access based on user group, and a source filter ensures "Deleted" cases are excluded from being accessed by any user. This approach meets both security requirements efficiently.

#### NEW QUESTION # 65

You're building an order management system.

You need to create a field that displays the total number of days it took to deliver each order, and show and sort by this data in a read-only grid. The data must be available in real-time.

Which function is the most appropriate for calculating this value?

- A. calworkdays()
- B. a!customFieldDateDiff()
- C. a!subtractDateTime()

**Answer: B**

Explanation:

a!customFieldDateDiff() is specifically designed for calculating date differences as custom record fields, enabling sorting and real-time calculation in read-only grids.

#### NEW QUESTION # 66

You're building an application with a review workflow.

Each submission must be approved by three users who can each approve or reject their request, and leave a comment. This action changes the status of the submission to 'Approved' or 'Rejected' correspondingly, and pushes the review to the previous or next assignee.

Which data model captures the workflow requirements appropriately?

- A. Three tables:  
Review to store id, statusId, comment  
RefStatus with columns id, value  
Review User with columns id, reviewId, user
- B. Two tables:  
Review with columns id, statusId, comment, user  
RefStatus with columns id, value
- C. Two tables:  
Review with columns id, statusId, comment, user1, user2, user3  
RefStatus with columns id, value

**Answer: A**

Explanation:

Using three tables - Review, RefStatus, and Review User - enables you to track each user's approval or rejection, comments, and status changes for each review, supporting a flexible, normalized workflow for multiple reviewers.

#### NEW QUESTION # 67
