

Easy To Use and Compatible GetValidTest Amazon AWS-Solutions-Architect-Professional Questions Formats

What's more, part of that GetValidTest AWS-Solutions-Architect-Professional dumps now are free: https://drive.google.com/open?id=1R9fe-B90PZ2_uFiyxcDmtxq8OoZROI_T

For one thing, the most advanced operation system in our company which can assure you the fastest delivery speed on our AWS-Solutions-Architect-Professional exam questions, and your personal information will be encrypted automatically by our operation system. For another thing, with our AWS-Solutions-Architect-Professional actual exam, you can just feel free to practice the questions in our training materials on all kinds of electronic devices. In addition, under the help of our AWS-Solutions-Architect-Professional Exam Questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future.

Understanding functional and technical aspects of AWS Solutions Architect Professional Exam Continuous Improvement for Existing SolutionsCost Control

The following will be discussed in **AWS SOLUTIONS ARCHITECT PROFESSIONAL exam dumps**:

- Determine a strategy to improve the reliability of an existing solution
- Determine how to improve the deployment of an existing solution
- Determine a strategy to improve the security of an existing solution
- Troubleshoot solution architectures

The AWS-Solutions-Architect-Professional Exam is considered to be one of the highest-level certifications offered by AWS. It requires a thorough understanding of a wide range of AWS services, including EC2, S3, VPC, RDS, and more. Candidates must also be able to design and implement complex, multi-tier applications using AWS services and be proficient in identifying and resolving issues related to performance, scalability, and security.

AWS-Solutions-Architect-Professional Exam Materials: AWS Certified Solutions Architect - Professional & AWS-Solutions-Architect-Professional Study Guide Files

If you want to start your learning as quickly as possible, just choose us, we can do this for you. Our AWS-Solutions-Architect-Professional study materials is famous for instant download, and you can get the downloading link and password within ten minutes after purchasing, if you don't receive, you can ask our service stuff for help. Besides, AWS-Solutions-Architect-Professional Exam Dumps of us contain both questions and answers, and you can check the answer when you finish practicing. AWS-Solutions-Architect-Professional study materials are also have certain questions and it will help you to pass the exam successfully.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q111-Q116):

NEW QUESTION # 111

As a part of building large applications in the AWS Cloud, the Solutions Architect is required to implement the perimeter security protection. Applications running on AWS have the following endpoints:

- * Application Load Balancer
- * Amazon API Gateway regional endpoint
- * Elastic IP address-based EC2 instances.
- * Amazon S3 hosted websites.
- * Classic Load Balancer

The Solutions Architect must design a solution to protect all of the listed web front ends and provide the following security capabilities:

- * DDoS protection
- * SQL injection protection
- * IP address whitelist/blacklist
- * HTTP flood protection
- * Bad bot scraper protection

How should the Solutions Architect design the solution?

- A. Secure the endpoints by using network ACLs and security groups and adding rules to enforce the company's requirements. Use AWS Lambda to automatically update the rules.
- B. Deploy AWS WAF and AWS Shield Advanced on all web endpoints. Add AWS WAF rules to enforce the company's requirements.
- C. Deploy Amazon CloudFront in front of all the endpoints. The CloudFront distribution provides perimeter protection. Add AWS Lambda-based automation to provide additional security.
- **D. Deploy Amazon CloudFront in front of all the endpoints. Deploy AWS WAF and AWS Shield Advanced. Add AWS WAF rules to enforce the company's requirements. Use AWS Lambda to automate and enhance the security posture.**

Answer: D

NEW QUESTION # 112

A company is planning to migrate an existing high performance computing (HPC) solution to the AWS Cloud.

The existing solution consists of a 12-node cluster running Linux with high speed interconnectivity developed on a single rack. A solution architect needs to optimize the performance of the HPC cluster.

Which combination of steps will meet these requirements? (Select TWO.)

- A. Use Amazon EC2 instances that support burstable performance
- B. Enable CPU hyperthreading
- **C. Use Amazon EC2 instances that support Elastic Fabric Adapter (EFA)**
- **D. Deploy Amazon EC2 instances in a placement group**
- E. Deploy instances across at least three Availability Zones

Answer: C,D

NEW QUESTION # 113

Your Application is not highly available, and your on-premises server cannot access the mount target because the Availability Zone

(AZ) in which the mount target exists is unavailable.
Which of the following actions is recommended?

- A. The application must implement the shutdown logic and delete the mount target in the AZ.
- B. The application must implement the checkpoint logic and recreate the mount target.
- C. The application must implement the delete logic and connect to a different mount target in the same AZ.
- **D. The application must implement the restart logic and connect to a mount target in a different AZ.**

Answer: D

Explanation:

Explanation

To make sure that there is continuous availability between your on-premises data center and your Amazon Virtual Private Cloud (VPC), it is suggested that you configure two AWS Direct Connect connections. Your application should implement restart logic and connect to a mount target in a different AZ if your application is not highly available and your on-premises server cannot access the mount target because the AZ in which the mount target exists becomes unavailable.

NEW QUESTION # 114

A company runs an ordering system on AWS using Amazon SQS and AWS Lambda, with each order received as a JSON message. recently the company had a marketing event that led to a tenfold increase in orders. With this increase, the following undesired behaviors started in the ordering system:

- Lambda failures while processing orders lead to queue backlogs.
- The same orders have been processed multiple times.

A solutions Architect has been asked to solve the existing issues with the ordering system and add the following resiliency features:

- Retain problematic orders for analysis.
- Send notification if errors go beyond a threshold value.

How should the Solutions Architect meet these requirements?

- **A. Receive multiple messages with each Lambda invocation, use long polling when receiving the messages, log the errors from the message processing code using Amazon CloudWatch Logs, create a dead letter queue with AWS Lambda to capture failed invocations, create CloudWatch events on Lambda errors for notification.**
- B. Receive multiple messages with each Lambda invocation, add error handling to message processing code and delete messages after processing, increase the visibility timeout for the messages, create a dead letter queue for messages that could not be processed, create an Amazon CloudWatch alarm on Lambda errors for notification.
- C. Receive multiple messages with each Lambda invocation, add error handling to message processing code and delete messages after processing, increase the visibility timeout for the messages, create a delay queue for messages that could not be processed, create an Amazon CloudWatch metric on Lambda errors for notification.
- D. Receive single messages with each Lambda invocation, put additional Lambda workers to poll the queue, delete messages after processing, increase the message timer for the messages, use Amazon CloudWatch Logs for messages that could not be processed, create a CloudWatch alarm on Lambda errors for notification.

Answer: A

Explanation:

NEW QUESTION # 115

A Solutions Architect is designing a system that will collect and store data from 2,000 internet-connected sensors. Each sensor produces 1 KB of data every second. The data must be available for analysis within a few seconds of it being sent to the system and stored for analysis indefinitely. Which is the MOST cost-effective solution for collecting and storing the data?

- A. Put each record into an object in Amazon S3 with a prefix that organizes the records by hour and hashes the record's key. Use S3 lifecycle management to transition objects to S3 infrequent access storage to reduce storage costs. Analyze recent and historical data by accessing the data in Amazon S3
- **B. Put each record in Amazon Kinesis Data Streams. Set up Amazon Kinesis Data Firehose to read records from the stream and group them into objects in Amazon S3. Analyze recent data from Kinesis Data Streams and historical data from Amazon S3.**
- C. Put each record into an Amazon DynamoDB table. Analyze the recent data by querying the table.

Use an AWS Lambda function connected to a DynamoDB stream to group records together, write them into objects in Amazon S3, and then delete the record from the DynamoDB table. Analyze recent data from the DynamoDB table and historical data from Amazon S3

- D. Put each record in Amazon Kinesis Data Streams. Use an AWS Lambda function to write each record to an object in Amazon S3 with a prefix that organizes the records by hour and hashes the record's key. Analyze recent data from Kinesis Data Streams and historical data from Amazon S3.

Answer: B

Explanation:

The key point is that the data must be available for analysis within a few seconds of it being sent to the system.

A is good but limited with Lambda function (2000)

B is an answer, offload the write to S3 by stream group, able to analyze directly from stream.

C is too slow

D is too cost (for lots of puts request to S3)

NEW QUESTION # 116

.....

The great advantage of the APP online version is if only the clients use our AWS-Solutions-Architect-Professional certification guide in the environment with the internet for the first time on any electronic equipment they can use our AWS-Solutions-Architect-Professional test materials offline later. So the clients can carry about their electronic equipment available on their hands and when they want to use them to learn our qualification test guide. So the clients can break through the limits of the time and environment and learn our AWS-Solutions-Architect-Professional Certification guide at their own wills. This is an outstanding merit of the APP online version.
