## CompTIA Security+ Certification Exam Sample Questions (Q430-Q435):

### NEW QUESTION # 430

Which of the following is a prerequisite for a DLP solution?

- A. Data destruction
- B. Data masking
- C. Data sanitization
- D. Data classification

**Answer: D**

Explanation:

Data classification is essential for a Data Loss Prevention (DLP) solution to function effectively. It identifies and labels data based on sensitivity and importance, enabling the DLP system to apply appropriate policies to protect it.

### NEW QUESTION # 431

A developer receives this message when testing a new external website:

This site cannot be reached.

Which of the following logs would most likely help identify the root cause?

- A. IDS
- B. System
- C. Firewall
- D. Application

**Answer: C**

Explanation:

When a site is unreachable, the first step is to verify whether network traffic is being blocked.

Firewall logs will show if connection attempts to the external site are being denied or dropped, pinpointing whether the firewall is preventing access.

#### NEW QUESTION # 432

An organization is developing a security program that conveys the responsibilities associated with the general operation of systems and software within the organization. Which of the following documents would most likely communicate these expectations?

- A. Business continuity plan
- **B. Acceptable use policy**
- C. Software development life cycle policy
- D. Change management procedure

**Answer: B**

Explanation:

Acceptable use policy outlines the expected behaviors and responsibilities of users when interacting with the organization's systems and software, including what is allowed and not allowed. It ensures that users are aware of how to securely use organizational resources.

#### NEW QUESTION # 433

Which of the following can automate vulnerability management?

- **A. SCAP**
- B. CVE
- C. CVSS
- D. OSINT

**Answer: A**

Explanation:

SCAP (Security Content Automation Protocol) is designed to automate vulnerability management, configuration assessment, and compliance checking. According to CompTIA Security+ SY0-701, SCAP standardizes how vulnerability information is expressed, measured, and shared, allowing security tools to automatically scan systems, identify weaknesses, and assess compliance against predefined baselines.

SCAP integrates multiple standards such as CVE, CVSS, CPE, and XCCDF, enabling automated vulnerability scanning, scoring, and reporting across large environments. This makes it a core technology for continuous vulnerability management and compliance automation.

CVE (A) is a catalog of known vulnerabilities, not an automation framework. OSINT (C) provides publicly available intelligence but does not automate remediation or assessment. CVSS (D) provides severity scoring but does not automate vulnerability management. Because SCAP enables automated identification, assessment, and reporting of vulnerabilities, the correct answer is B: SCAP.

#### NEW QUESTION # 434

A security manager wants to reduce the number of steps required to identify and contain basic threats. Which of the following will help achieve this goal?

- A. DMARC
- B. SIEM
- **C. SOAR**
- D. NIDS

**Answer: C**
