

# Pass Guaranteed 2026 Peoplecert ITIL-4-Practitioner-Deployment-Management: The Best Valid Test ITIL 4 Practitioner: Deployment Management Format

BONUS!!! Download part of PrepAwayTest ITIL-4-Practitioner-Deployment-Management dumps for free:  
[https://drive.google.com/open?id=10CGUecRZWUkAO8AtU8dGMCDH6bcpj\\_AL](https://drive.google.com/open?id=10CGUecRZWUkAO8AtU8dGMCDH6bcpj_AL)

It is evident to all that the ITIL-4-Practitioner-Deployment-Management test torrent from our company has a high quality all the time. A lot of people who have bought our products can agree that our ITIL-4-Practitioner-Deployment-Management test questions are very useful for them to get the certification. There have been 99 percent people used our ITIL-4-Practitioner-Deployment-Management exam prep that have passed their exam and get the certification, more importantly, there are signs that this number is increasing slightly. It means that our ITIL-4-Practitioner-Deployment-Management Test Questions are very useful for all people to achieve their dreams, and the high quality of our ITIL-4-Practitioner-Deployment-Management exam prep is one insurmountable problem.

## Peoplecert ITIL-4-Practitioner-Deployment-Management Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Partners and suppliers: This section of the exam measures the skills of a Change Implementation Lead and examines the influence of partners and suppliers in the deployment process. It highlights the importance of effective collaboration and communication with external stakeholders to ensure that deployments are delivered according to expectations and with minimal risks.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Practice success factors: This section of the exam measures the skills of a Change Implementation Lead and focuses on understanding practice success factors and the core metrics used to evaluate deployment effectiveness. It emphasizes the importance of tracking efficiency and success in service deployment and how these metrics help improve the overall stability and agility of the service transition process.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Information and technology: This section of the exam measures the skills of a Service Transition Manager and explores how technology and information systems support deployment activities. It covers how tools and digital platforms can enhance the planning, tracking, and execution of deployment efforts, ultimately contributing to more reliable and streamlined service rollouts.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>The ITIL Capability model: This section of the exam measures the skills of a Service Transition Manager and introduces how capability criteria contribute to developing and maturing Deployment Management practices. It focuses on aligning organizational capabilities with ITIL best practices to maintain consistency, quality, and effectiveness in service transitions.</li> </ul>

>> Valid Test ITIL-4-Practitioner-Deployment-Management Format <<

## Practice ITIL-4-Practitioner-Deployment-Management Exam Pdf | New ITIL-4-Practitioner-Deployment-Management Test Sample

Are you still worried about the exam? Don't worry! Our ITIL-4-Practitioner-Deployment-Management exam torrent can help you overcome this stumbling block during your working or learning process. Under the instruction of our ITIL-4-Practitioner-Deployment-Management test prep, you are able to finish your task in a very short time and pass the exam without mistakes to obtain the Peoplecert certificate. We will tailor services to different individuals and help them take part in their aimed exams after only 20-30 hours practice and training. Moreover, we have experts to update ITIL-4-Practitioner-Deployment-Management Quiz torrent in terms of theories and contents according to the changeable world on a daily basis, which can ensure that you are not falling behind of others by some slight knowledge gaps.

## Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions (Q19-Q24):

### NEW QUESTION # 19

[Integrate Deployment Management with Other Practices]

A large multi-national organization uses DevOps principles to enable fast and effective development and implementation of software products. Each product team has a lot of independence, but a centralized IT governance team ensures consistency and adherence to the organization's policies. Different people within the organization have different opinions about whether deployment management should be centralized or distributed among the teams. How should the deployment management practice be implemented and managed in this organization to ensure that the practice meets their needs?

- A. Software developers in each team should take full responsibility for deployment of software that they develop
- B. Each development team should have an independent deployment manager who owns all aspects of deployment within that team
- C. A centralized deployment management team should manage and coordinate deployments for all development teams
- **D. A centralized deployment management team should support the product teams by providing guidance and tooling**

**Answer: D**

Explanation:

In a DevOps environment with independent product teams and centralized governance, ITIL 4 recommends balancing autonomy with consistency. Option C, where a centralized deployment management team supports product teams by providing guidance and tooling, aligns with this approach. It ensures that teams retain flexibility to deploy efficiently while benefiting from standardized tools, best practices, and governance, maintaining organizational alignment and reducing risks of inconsistency.

Option A (Each development team should have an independent deployment manager who owns all aspects of deployment within that team): Incorrect, as fully independent deployment managers per team could lead to inconsistent practices and tools, undermining centralized governance and creating silos.

Option B (A centralized deployment management team should manage and coordinate deployments for all development teams): Incorrect, as centralizing all deployment activities reduces team autonomy, contradicting DevOps principles of empowering teams and slowing down delivery.

Option C (A centralized deployment management team should support the product teams by providing guidance and tooling): Correct, as it supports DevOps autonomy while ensuring consistency through shared tools (e.g., CI/CD pipelines) and guidance, aligning with ITIL 4's focus on value co-creation and governance.

Option D (Software developers in each team should take full responsibility for deployment of software that they develop): Incorrect,

as while developers often handle deployments in DevOps, completely bypassing a structured deployment management practice risks non-compliance with governance and inconsistent outcomes.

### NEW QUESTION # 20

[Apply Deployment Management Processes]

What should the organization keep in mind when planning improvements to deployment models?

- A. User resistance to updates is not a relevant factor to consider when designing deployment models
- **B. Deployment model updates should consider inefficient processes**
- C. The impact of deployed software should not be considered when designing these models
- D. The same deployment approach should be used for deployments of similar size

**Answer: B**

Explanation:

ITIL 4 emphasizes continual improvement in deployment management, which includes identifying and addressing inefficiencies in deployment models to enhance performance, reliability, and value delivery. Option D directly aligns with this principle by focusing on streamlining inefficient processes during model updates.

Option A (The impact of deployed software should not be considered when designing these models): Incorrect, as ITIL 4 stresses that the impact of deployments on services, users, and the organization is a critical consideration to ensure value and minimize disruption.

Option B (User resistance to updates is not a relevant factor to consider when designing deployment models): Incorrect, as user experience and acceptance are key factors in ITIL 4's value co-creation model, and resistance must be addressed to ensure successful deployments.

Option C (The same deployment approach should be used for deployments of similar size): Incorrect, as ITIL 4 advocates for context-specific deployment models tailored to the unique needs of each service or environment, not a one-size-fits-all approach.

Option D (Deployment model updates should consider inefficient processes): Correct, as improving deployment models involves analyzing current processes, identifying bottlenecks or waste, and optimizing workflows to deliver greater value.

### NEW QUESTION # 21

[Understand the Key Concepts of Deployment Management]

An IT service provider is using continuous integration and is considering the introduction of continuous delivery. Which is a benefit of this proposed change for the service provider?

- A. Code is tested iteratively and frequently
- **B. Users experience changes which are smaller and more frequent**
- C. Deployments of software builds are scripted to allow for automation
- D. Developers spend less time fixing issues in their code

**Answer: B**

Explanation:

Continuous delivery (CD) in ITIL 4 extends continuous integration (CI) by ensuring that every validated change is ready for deployment to production, enabling smaller and more frequent releases. The key benefit for users is that they experience changes which are smaller and more frequent (Option D), reducing risk, improving feedback cycles, and delivering value faster.

Option A (Developers spend less time fixing issues in their code): Incorrect, as while CD may reduce some issues through automation, this is not its primary benefit, and CI already includes frequent testing to catch issues early.

Option B (Code is tested iteratively and frequently): Incorrect, as iterative and frequent testing is a feature of continuous integration, not a new benefit introduced by continuous delivery.

Option C (Deployments of software builds are scripted to allow for automation): Incorrect, as scripting and automation are part of both CI and CD pipelines, not a unique benefit of introducing CD.

Option D (Users experience changes which are smaller and more frequent): Correct, as CD enables rapid, incremental releases to production, directly benefiting users with faster and less disruptive updates.

### NEW QUESTION # 22

[Use Tools and Techniques for Deployment]

Which automation tools should be used to transport and install configuration items into a test environment?

- **A. Deployment tools**
- B. Service configuration management tools
- C. Work planning and prioritization tools
- D. Environment configuration and management tools

**Answer: A**

Explanation:

In ITIL 4, deployment tools are specifically designed to automate the transportation and installation of configuration items (CIs) into various environments, including test environments. These tools ensure consistency, repeatability, and efficiency in deployment processes, which are critical for managing CIs during testing phases.

Option A (Deployment tools): Correct, as deployment tools (e.g., Jenkins, Ansible, or Terraform for certain use cases) are tailored for automating the movement and installation of CIs, ensuring they are correctly placed in test environments with minimal manual intervention.

Option B (Environment configuration and management tools): While these tools (e.g., Puppet, Chef) manage environment settings, their primary focus is on configuring and maintaining environments, not transporting or installing CIs, making them less relevant here.

Option C (Work planning and prioritization tools): Tools like Jira or Trello focus on task management and prioritization, not on automating CI deployment, so this option is incorrect.

Option D (Service configuration management tools): These tools manage relationships and data about CIs in a configuration management database (CMDB), not the physical transport or installation of CIs, ruling out this option.

### NEW QUESTION # 23

[Understand the Key Concepts of Deployment Management]

Which of the following BEST describes the scope of deployment management practice?

- A. The practice includes deploying network hubs but not additional software licenses to the live environment
- B. The practice includes removing configuration documentation but not physical servers from the live environment
- C. The practice includes updating service documentation and transferring it to the live environment
- **D. The practice includes deploying network hubs to and removing applications from staging environments**

**Answer: D**

Explanation:

ITIL 4's deployment management practice encompasses moving hardware, software, and associated components into or out of environments (e.g., staging, testing, or production) to support service delivery. Option A, which includes deploying network hubs (hardware) and removing applications from staging environments (software), accurately reflects this broad scope across the service lifecycle.

Option A (The practice includes deploying network hubs to and removing applications from staging environments): Correct, as it covers both hardware and software movements across environments, aligning with ITIL 4's definition of deployment management.

Option B (The practice includes updating service documentation and transferring it to the live environment): Incorrect, as updating and transferring documentation is part of knowledge management, not deployment management.

Option C (The practice includes removing configuration documentation but not physical servers from the live environment):

Incorrect, as deployment management includes moving physical servers, and configuration documentation is managed elsewhere.

Option D (The practice includes deploying network hubs but not additional software licenses to the live environment): Incorrect, as software licenses may be part of deployment if required, and the option arbitrarily limits the scope.

### NEW QUESTION # 24

.....

If you buy the ITIL-4-Practitioner-Deployment-Management study materials online, you may concern the safety of your money. If you do have the concern, you can just choose us. We use the international recognition third party for the payment. It will ensure the safety of your money. We are pass guaranteed if you buy ITIL-4-Practitioner-Deployment-Management Exam Dumps of us, we also money back guarantee if you fail to pass the exam. If you find that your rights haven't got enough guaranteed, you can ask for refund, and the third party will protect your interests.
