

# Free C\_DBADM\_2601 Pdf Guide | Test C\_DBADM\_2601 Lab Questions

One of the best things about our SAP Certified - Database Administrator - SAP HANA (C\_DBADM\_2601) prep material is the convenience it offers. The SAP C\_DBADM\_2601 study material is available in three formats: web-based SAP Certified - Database Administrator - SAP HANA (C\_DBADM\_2601) practice exam, desktop practice test software, and Prepare for your SAP Certified - Database Administrator - SAP HANA (C\_DBADM\_2601) PDF. We also understand that every student is unique and learns differently, so our product is designed in three formats to adapt to their individual needs.

Many ambitious IT professionals want to make further improvements in the IT industry and be closer from the IT peak. They would choose this difficult SAP certification C\_DBADM\_2601 exam to get certification and gain recognition in IT area. SAP C\_DBADM\_2601 is very difficult and passing rate is relatively low. But enrolling in the SAP Certification C\_DBADM\_2601 Exam is a wise choice, because in today's competitive IT industry, we should constantly upgrade ourselves. However, you can choose many ways to help you pass the exam.

## Test C\_DBADM\_2601 Lab Questions - Latest C\_DBADM\_2601 Exam Forum

Our track record is outstanding. With our actual SAP Certified - Database Administrator - SAP HANA (C\_DBADM\_2601) exam questions, we have helped hundreds of C\_DBADM\_2601 exam applicants in achieving success. We guarantee that if you use our real SAP Certified - Database Administrator - SAP HANA (C\_DBADM\_2601) exam dumps you will clear the test in one go. And if you fail in this objective you can claim a full refund (terms and conditions apply). Excellent offers of DumpsKing don't stop here.

## SAP Certified - Database Administrator - SAP HANA Sample Questions (Q115-Q120):

### NEW QUESTION # 115

A regional insurance claims processor runs SAP HANA for daily operational reporting. After a scheduled workload increase, SAP HANA cockpit shows higher memory usage and slower report response times. The alert list shows a threshold warning, but the operations note only records that reports are "slow." A support analyst proposes increasing the threshold so the warning no longer appears.

The constraint is that the administrator must determine whether the warning represents a real workload pattern requiring follow-up or only an alert configuration mismatch. The response must preserve monitoring usefulness for future workload changes.

Which action best addresses the monitoring issue?

- A. Restart the database so memory usage returns to normal before the next reporting cycle.
- B. Increase the alert threshold immediately because users already reported slow response times.
- C. Correlate the alert timing with workload and memory behavior, update the monitoring evidence, and adjust thresholds only if the observed baseline supports it.
- D. Disable the alert temporarily so operational reports can continue without monitoring noise.

**Answer: C**

Explanation:

Feedback:

This validates the performance signal before changing monitoring configuration. Correlating alert timing, workload behavior, memory evidence, and threshold settings preserves useful monitoring while supporting a justified adjustment.

### NEW QUESTION # 116

A regional medical device distributor uses SAP HANA for warranty analytics. After a backup policy adjustment, SAP HANA cockpit shows the latest backup completed successfully. During a recovery readiness review, the administrator finds that the recovery workbook still identifies the previous recovery target point and does not include the latest completed backup in the selection sequence. A reviewer suggests approving the workbook because the backup catalog shows the new backup entry. The constraint is that the administrator must prove the documented recovery sequence can reach the intended recovery point. Catalog visibility alone is not enough if the workbook still selects an older recovery path.

Which action best supports recovery readiness approval?

- A. Update the recovery workbook to include the latest valid backup sequence, validate the intended recovery point, and record the evidence.
- B. Approve the workbook because the backup catalog shows the latest backup completed successfully.
- C. Restart SAP HANA so the recovery workbook can recognize the latest backup entry during the next review.
- D. Create a new backup catalog export and attach it to the workbook without changing the selected recovery sequence.

**Answer: A**

Explanation:

Feedback:

This corrects the recovery-sequence dependency at the procedure layer. Updating the workbook, validating the intended recovery point, and recording evidence aligns backup availability, artifact selection, recovery execution, and resilience approval.

### NEW QUESTION # 117

A regional airport operator maintains SAP HANA for operational analytics while preparing an administration model that covers an on-premises database and an SAP HANA Cloud target. During a readiness review, SAP HANA cockpit confirms the on-premises database is available, while SAP HANA Cloud Central confirms that the cloud target is provisioned. However, the review evidence does not identify which environment owns backup monitoring, daily administration checks, or migration rehearsal validation.

The constraint is that the administrator must prevent unclear operational ownership before the next handover meeting. The team must keep both environments in scope without treating tool visibility as proof that administration responsibilities are correctly assigned.

Which action best addresses the ownership ambiguity?

- A. Assign each administration activity to the correct SAP HANA environment and validate the evidence source for each responsibility.

- B. Remove the cloud target from the readiness review because it is not yet supporting the active workload.
- C. Approve the handover because both environments are visible in their respective SAP administration tools.
- D. Use the on-premises database as the single administration reference until the migration project is fully completed.

**Answer: A**

Explanation:

Feedback:

This resolves the ambiguity at the operational ownership layer. Mapping each administration activity to the correct environment and validating the evidence source ensures that availability, backup monitoring, daily checks, and migration validation are not mixed across SAP HANA targets.

### NEW QUESTION # 118

#### CHALLENGE 3 - Cloud Modernization Evidence Boundary

The modernization lead wants the SAP HANA Cloud database included in the same readiness status because it is provisioned and has a limited outage analytics dataset. The cloud environment has not completed the startup, monitoring, or recovery evidence package used for active hypercare systems. What is the best response?

- A. Use the upgraded service reporting system's monitoring record as the SAP HANA Cloud readiness record.
- B. Include the cloud database in the same status because provisioning and sample data show progress.
- **C. Keep cloud modernization evidence separate until cloud-specific administration validation is completed.**
- D. Stop cloud planning until the current hypercare readiness decision is fully completed.

**Answer: C**

Explanation:

Feedback:

Cloud modernization evidence should remain separate until cloud-specific administration validation is completed. Provisioning and sample data support planning, but they do not equal active hypercare readiness.

### NEW QUESTION # 119

#### CHALLENGE 4 - Regional Release Recovery Assurance

Backups completed for the upgraded central SAP HANA system and the newly installed remediation database before testing began. Recovery validation for the remediation database is scheduled but not complete, and the upgraded system has only backup completion evidence. What should happen before regional release approval?

- **A. Complete recovery validation and document startup behavior for the remediation systems.**
- B. Replace recovery validation with dashboard availability because this is not a production outage.
- C. Approve the release because completed backups are enough for retail reporting continuity.
- D. Release the template and perform recovery validation only if reporting becomes unavailable.

**Answer: A**

Explanation:

Feedback:

Recovery validation and startup behavior should be completed before regional release approval. Backup completion supports continuity planning, but it does not prove recoverability for the remediation systems.

### NEW QUESTION # 120

.....

You can practice all the difficulties and hurdles which could be faced in an actual SAP exam. It also assists you in boosting confidence and reducing problem-solving time. The Pass4future designs C\_DBADM\_2601 desktop-based practice software for desktops, so you can install it from a website and then use it without an internet connection. You only need an internet connection to verify the license of the products. No other plugins are required to employ it.
