

Certificate Microsoft SC-900 Exam - Valid SC-900 Exam Objectives

BONUS!!! Download part of Prep4cram SC-900 dumps for free: <https://drive.google.com/open?id=13xGFdLf72PyHQP-UlhSW1H1ydbm5k-MJ>

We ensure you that if you can't pass the exam just one time by using SC-900 training materials of us, and we will give you full refund. And the money will be returned to your payment account. In addition, SC-900 exam braibumps are high-quality and accuracy, and they can help you pass the exam successfully. In order to build up your confidence for SC-900 Exam Materials, we are pass guarantee and money back guarantee, so you don't need to worry you will waste your money. We offer you free update for one year for SC-900 training materials, and our system will send update version to your email automatically.

Microsoft SC-900 exam is suitable for candidates who are new to the field of cybersecurity and are seeking to gain a basic understanding of Microsoft security solutions. It is also beneficial for IT professionals who are looking to expand their knowledge and skillset in the areas of security, compliance, and identity management. SC-900 exam is a great starting point for individuals who wish to pursue other Microsoft certifications in the future, such as the Microsoft Certified: Azure Security Engineer Associate certification.

Microsoft SC-900 Exam covers various topics such as security concepts, security management, identity management, and compliance management. SC-900 exam is designed to test the candidate's knowledge and skills in these areas. SC-900 exam consists of multiple-choice questions, and candidates have 60 minutes to complete the exam. The passing score for the exam is 700 out of 1000.

Valid SC-900 Exam Objectives | SC-900 Valid Study Guide

These SC-900 practice exams train you to manage time so that you can solve questions of the SC-900 real test on time. Prep4cram offers Microsoft practice tests which provide you with real examination scenarios. By practicing under the pressure of SC-900 real test again and again, you can overcome your Microsoft Security, Compliance, and Identity Fundamentals exam anxiety. Taking SC-900 these practice exams is important for you to attempt Microsoft real dumps questions and pass SC-900 certification exam test on the first take.

Microsoft SC-900 Exam covers various topics including security, compliance, and identity concepts, as well as the various services and products available on the Microsoft platform to address these areas. SC-900 exam is designed to test your understanding of these foundational concepts and their importance in ensuring the security and compliance of an organization's data and systems. By passing SC-900 Exam, candidates demonstrate their understanding of these concepts and their ability to effectively implement security and compliance measures using Microsoft services.

Microsoft Security, Compliance, and Identity Fundamentals Sample Questions (Q183-Q188):

NEW QUESTION # 183

What can be created in Active Directory Domain Services (AD DS)?

- A. mob devices
- B. line-of-business (106) applications that require modern authentication
- **C. computer accounts**
- D. software as a service (SaaS) applications that require modern authentication

Answer: C

Explanation:

In Microsoft's identity platform, Active Directory Domain Services (AD DS) is the on-premises directory that maintains directory objects such as users, groups, and computers. Microsoft documentation describes AD DS as a service that "stores information about objects on the network and makes this information easy for administrators and users to find and use." It further explains that AD DS contains objects like "users, groups, computers, and other resources," and that administrators use tools such as Active Directory Users and Computers to create and manage these objects. A key object type is the computer account; Microsoft states that "a computer that's joined to a domain has a corresponding computer account object in Active Directory" and that these accounts are created and managed within AD DS to enable secure authentication and authorization for domain-joined devices. By contrast, mobile devices are typically enrolled and managed through Microsoft Intune/Endpoint Manager and Azure AD device objects, not created in AD DS. Likewise, SaaS applications that require modern authentication integrate with Microsoft Entra ID (Azure AD) using OpenID Connect/OAuth 2.0-not with AD DS. Line-of-business apps that rely on modern authentication are also registered in Entra ID, while AD DS supports traditional Kerberos/NTLM for domain resources. Therefore, among the options provided, the object you can create in AD DS is computer accounts.

NEW QUESTION # 184

What is an example of encryption at rest?

- A. accessing a website by using an encrypted HTTPS connection
- B. encrypting communications by using a site-to-site VPN
- **C. encrypting a virtual machine disk**
- D. sending an encrypted email

Answer: C

Explanation:

In Microsoft's SCI guidance, encryption at rest is defined as protecting data when it is stored on a disk or other persistent media. Microsoft describes it as controls that "help safeguard your data to meet your organizational security and compliance commitments by encrypting data when it is persisted," distinguishing it from protections for data in transit. Within Azure and Microsoft 365, examples include Azure Disk Encryption for IaaS VMs (using BitLocker for Windows and DM-Crypt for Linux), server-side encryption for storage accounts, and Transparent Data Encryption for databases. A virtual machine's OS and data disks encrypted with BitLocker or DM-Crypt are canonical cases of at-rest encryption because the encryption keys protect the physical media; the data becomes unreadable if the disks are accessed outside the authorized context. By contrast, site-to-site VPN, HTTPS web sessions, and encrypted email protect data in transit-they secure network communications but do not encrypt the data where it is stored. Therefore, among the options provided, encrypting a virtual machine disk is the correct example of encryption at rest in Microsoft's security model.

NEW QUESTION # 185

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can create one Azure Bastion per virtual network.	<input type="radio"/>	<input type="radio"/>
Azure Bastion provides secure user connections by using RDP.	<input type="radio"/>	<input type="radio"/>
Azure Bastion provides a secure connection to an Azure virtual machine by using the Azure portal.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
You can create one Azure Bastion per virtual network.	<input checked="" type="radio"/>	<input type="radio"/>
Azure Bastion provides secure user connections by using RDP.	<input checked="" type="radio"/>	<input type="radio"/>
Azure Bastion provides a secure connection to an Azure virtual machine by using the Azure portal.	<input checked="" type="radio"/>	<input type="radio"/>

Statements	Yes	No
You can create one Azure Bastion per virtual network.	<input type="radio"/>	<input type="radio"/>
Azure Bastion provides secure user connections by using RDP.	<input type="radio"/>	<input type="radio"/>
Azure Bastion provides a secure connection to an Azure virtual machine by using the Azure portal.	<input type="radio"/>	<input type="radio"/>

NEW QUESTION # 186

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft Sentinel uses logic apps to identify anomalies across resources.	<input type="radio"/>	<input type="radio"/>
Microsoft Sentinel uses workbooks to correlate alerts into incidents.	<input type="radio"/>	<input type="radio"/>
The hunting search and query tools of Microsoft Sentinel are based on the MITRE ATT&CK framework.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area

Statements

Microsoft Sentinel uses logic apps to identify anomalies across resources.

Yes

☐

No

☒

Microsoft Sentinel uses workbooks to correlate alerts into incidents.

☐☒

The hunting search-and-query tools of Microsoft Sentinel are based on the MITRE ATT&CK framework.

☒☐

Answer Area

Statements

Microsoft Sentinel uses logic apps to identify anomalies across resources.

☐☒

Microsoft Sentinel uses workbooks to correlate alerts into incidents.

☐☒

The hunting search-and-query tools of Microsoft Sentinel are based on the MITRE ATT&CK framework.

☒☐

NEW QUESTION # 187

Select the answer that correctly completes the sentence.

	Microsoft
Active Directory Domain Services (AD DS)	enables collaboration with business partners from external organizations such as suppliers, partners, and vendors. External users appear as guest users in the directory.
Active Directory forest trusts	
Azure Active Directory (Azure AD) business-to-business (B2B)	
Azure Active Directory business-to-consumer B2C (Azure AD B2C)	

Answer:

Explanation:

	Microsoft
Active Directory Domain Services (AD DS)	enables collaboration with business partners from external organizations such as suppliers, partners, and vendors. External users appear as guest users in the directory.
Active Directory forest trusts	
Azure Active Directory (Azure AD) business-to-business (B2B)	
Azure Active Directory business-to-consumer B2C (Azure AD B2C)
