Oracle Cloud Infrastructure 2025 AI Foundations Associate Sample Questions (Q19-Q24):

NEW QUESTION # 19

You are part of the medical transcription team and need to automate transcription tasks. Which OCI AI service are you most likely to use?

- A. Speech
- B. Language
- C. Vision
- D. Document Understanding

Answer: A

Explanation:

For automating transcription tasks in a medical transcription team, the most appropriate OCI AI service to use would be the "Speech" service. This service is designed to convert spoken language into text, which is essential for transcribing spoken medical reports or consultations into written form. The OCI Speech service provides capabilities such as speech-to-text conversion, which is specifically tailored for handling audio input and producing accurate transcriptions.

NEW QUESTION # 20

Which AI domain is associated with tasks such as identifying the sentiment of text and translating text between languages?

- A. Natural Language Processing
- B. Natural Language Processing
- C. Anomaly Detection
- D. Computer Vision

Answer: A

Explanation:

Natural Language Processing (NLP) is the AI domain associated with tasks such as identifying the sentiment of text and translating text between languages. NLP focuses on enabling machines to understand, interpret, and generate human language in a way that is both meaningful and useful. This domain covers a wide range of applications, including text classification, language translation, sentiment analysis, and more, all of which involve processing and analyzing natural language data.

NEW QUESTION # 21

What would you use Oracle AI Vector Search for?

- A. Manage database security protocols.
- B. Query data based on semantics.
- C. Store business data in a cloud database.
- D. Query data based on keywords.

Answer: B

Explanation:

Oracle AI Vector Search is designed to query data based on semantics rather than just keywords. This allows for more nuanced and contextually relevant searches by understanding the meaning behind the words used in a query. Vector search represents data in a high-dimensional vector space, where semantically similar items are placed closer together. This capability makes it particularly powerful for applications such as recommendation systems, natural language processing, and information retrieval where the meaning and context of the data are crucial.

NEW QUESTION # 22

What feature of OCI Data Science provides an interactive coding environment for building and training models?

- A. Conda environment
- B. Model catalog
- C. Notebook sessions
- D. Accelerated Data Science (ADS) SDK

Answer: C

Explanation:

In OCI Data Science, Notebook sessions provide an interactive coding environment that is essential for building, training, and deploying machine learning models. These sessions allow data scientists to write and execute code in real time, offering a flexible environment for data exploration, model experimentation, and iterative development. The integration with various OCI services and support for popular machine learning frameworks further enhances the utility of Notebook sessions, making them a crucial tool in the data science workflow.

NEW QUESTION # 23

Which type of machine learning is used to understand relationships within data and is not focused on making predictions or classifications?

- A. Reinforcement learning
- B. Unsupervised learning

- C. Supervised learning
- D. Active learning

Answer: B

Explanation:

Unsupervised learning is a type of machine learning that focuses on understanding relationships within data without the need for labeled outcomes. Unlike supervised learning, which requires labeled data to train models to make predictions or classifications, unsupervised learning works with unlabeled data and aims to discover hidden patterns, groupings, or structures within the data. Common applications of unsupervised learning include clustering, where the algorithm groups data points into clusters based on similarities, and association, where it identifies relationships between variables in the dataset. Since unsupervised learning does not predict outcomes but rather uncovers inherent structures, it is ideal for exploratory data analysis and discovering previously unknown patterns in data.
