APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38
Which statement is a factor that will influence the implementation of the information security management system?

- A. The ISMS will be operated as an independent process within the organization
- B. The ISMS will be scaled to the controls according to the needs of the organization
- C. The ISMS will encompass all controls specified within ISO/IEC 27001
- D. The ISMS will be separate from the organization's overall management structure

Answer: B

Explanation:
ISO/IEC 27001 makes clear that the ISMS is intended to be tailored to the organization. The standard states: "This document also includes requirements for the assessment and treatment of information security risks tailored to the needs of the organization. The requirements set out in this document are generic and are intended to be applicable to all organizations regardless of type, size or nature." This means implementation is scaled based on each organization's risk, context, and needs, not a fixed one-size-fits-all set of activities or controls. Clause 6.1.3 further reinforces that control selection is flexible and risk-driven: "Organizations can design controls as required or identify them from any source," and "Annex A contains a list of possible information security controls... The information security controls listed in Annex A are not exhaustive and additional information security controls can be included if needed." Together, these extracts verify that the ISMS implementation is influenced by and scaled to the organization's needs and selected controls, not separated from management processes (A, D) nor mandated to include "all controls" (B).

NEW QUESTION # 39
Which statement describes Annex A of ISO/IEC 27001?

- A. Provides a reference list of information security controls and their requirements
- B. Provides measures to determine risk treatment effectiveness
- C. Defines a mandatory list of controls that shall be implemented
- D. Defines the criteria for accepting risks

Answer: A

Explanation:
Annex A of ISO/IEC 27001:2022 is titled:
"Reference control objectives and controls." It provides a reference list of information security controls, structured into 4 themes: organizational, people, physical, and technological.
The standard explicitly states in Clause 6.1.3: "Organizations can design controls as required or identify them from any source. Annex A contains a list of possible information security controls." This means controls in Annex A are not mandatory (eliminating option C). Risk acceptance criteria (A) are defined in Clause 6.1.2, not Annex A. Annex A also does not provide measures for treatment effectiveness (D).
Thus, Annex A is best described as a reference list of information security controls. Correct answer:B.

NEW QUESTION # 40
Which item is required to be included in an information security policy?

- A. A Statement of Applicability which defines the necessary controls to be implemented
- B. A plan for the continual improvement of the information security management system
- C. A framework enabling concerns with the information security policy to be addressed
- D. A commitment to satisfy applicable requirements related to information security

Answer: D

Explanation:
Clause 5.2 (Information security policy) requires that the policy:
* "includes information security objectives (or provides a framework for setting them)"
* "includes a commitment to satisfy applicable requirements related to information security"
* "includes a commitment to continual improvement of the ISMS."
Among the listed options, the exact mandatory requirement is"a commitment to satisfy applicable requirements related to information security". Option B partially reflects Clause 5.2 (commitment to continual improvement), but the wording given in the standard prioritizes the satisfaction of applicable requirements (e.g., legal, regulatory, contractual). Option C is not a policy requirement. Option D (Statement of Applicability) is a separate mandatory document (Clause 6.1.3) and not part of the policy itself. Thus, the correct answer isA.

NEW QUESTION # 41

Which item is required to be considered when defining the scope and boundaries of the information security management system?

- A. The regular activities necessary to maintain and improve the ISMS
- B. The level of quality to which the ISMS must adhere
- C. The lessons learned from the information security experiences of other organizations
- D. The dependencies between activities performed by the organization

Answer: D

Explanation:
Clause 4.3 (Determining the scope of the ISMS) requires consideration of:
"the external and internal issues referred to in 4.1; the requirements referred to in 4.2; and interfaces and dependencies between activities performed by the organization, and those that are performed by other organizations." This confirms that dependencies between activities are a required factor when defining scope. Options B (quality levels), C (lessons learned), and D (regular activities for improvement) are not scope requirements, though they may be relevant in planning or improvement processes.
Thus, the verified answer is A: Dependencies between activities performed by the organization.

NEW QUESTION # 42

What international standard provides guidance on the integration of ISO/IEC 27001 and the IT Service Management standard?

- A. ISO/IEC 20000-1
- B. None of the above
- C. ISO/IEC 27013
- D. ISO/IEC 27002

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27013 standards:
ISO/IEC 27013 is titled:
"Information technology - Security techniques - Guidance on the integrated implementation of ISO /IEC 27001 and ISO/IEC 20000-1."
This standard provides organizations with specific advice on how to integrate an Information Security Management System (ISMS) with an IT Service Management System (ITSMS). ISO/IEC 20000-1 is the IT Service Management requirements standard, but integration guidance is provided in 27013. ISO/IEC 27002 (A) is guidance for controls, not integration. Option D is incorrect since ISO/IEC 27013 explicitly exists for this purpose.
Therefore, the correct verified answer isB: ISO/IEC 27013.
