## Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q57-Q62):

### NEW QUESTION # 57

Universal Containers has a dashboard for sales managers. They need the ability to visualize the number of Closed Won opportunities by month, quarter, or year, and then display the result in a single chart. A CRM Analytics consultant creates a custom query to display three values:

ClosedDate\_month, ClosedDate\_quarter, and ClosedDate\_year.

What should the consultant do next?

- A. Use selection binding/interaction to update the measure in the chart.
- B. Use result binding/interaction to update the grouping in the chart.
- C. Use selection binding/interaction to update the grouping in the chart.

**Answer: C**

### NEW QUESTION # 58

Universal Containers (UC) has a "Sales Manager" dashboard. UC has a compare table that has multiple groupings and columns added showing the Total and Subtotals of the numeric values. A consultant is asked to add additional groups to enhance details about UC's customers.

Which feature should the consultant use to make the navigation of the compare tables easier for the end user?

- A. Create the table using SAQL query to accommodate this and make it user friendly.
- B. Select the Enable Expand or Collapse option from the table properties.
- C. Scroll to the very end to see the details.

**Answer: B**

### NEW QUESTION # 59

A CRM Analytics consultant has been tasked with providing access to CRM Analytics for a few users. They should be able to view the data but unable to export it.

Which permission should the consultant make sure to NOT include?

- A. View CRM Analytics Assets
- B. Export CRM Analytics data
- C. Download CRM Analytics data

**Answer: C**

### NEW QUESTION # 60

The CRM Analytics consultant at Universal Containers (UC) has set up data sync for the Salesforce Opportunity object with the Amount currency field added. This is being used in multiple datasets and dashboards, as UC is a multi-currency organization.

The currency used in Salesforce records is set up in GBP but the data on the dashboard is converting to USD.

Conversion logic is not set up on any of the recipes.

Why is the currency converting?

- A. The ANS local currency is set up as USD.
- B. The Integration User currency is set up as USD.
- C. The org corporate currency is set up as USD.

**Answer: C**

Explanation:

In Salesforce CRM Analytics, when dealing with multi-currency environments, the system relies on the organization's corporate

currency setting for reporting, unless explicitly overridden. In this case, even though the Opportunity data is stored in GBP in Salesforce, the dashboards are showing USD because the corporate currency for the org is set to USD. This behavior is expected unless currency conversion logic is implemented in the datasets or recipes.

The corporate currency serves as the default for currency fields in datasets and dashboards unless configured otherwise. This can be confirmed under the "Manage Currencies" settings in Salesforce.

### NEW QUESTION # 61

The CRM Analytics consultant at Universal Containers has set data syncs and recipe runs back to back.

However, they notice that the data syncs and recipe run jobs fail repeatedly. Upon investigation, they realize the data syncs and recipes are tightly coupled which leads to too many runs being queued and eventually being canceled.

How should the consultant resolve this issue?

- A. Enable priority scheduling to automatically queue shorter or smaller runs before longer or larger ones.
- B. Raise a case with Salesforce Support to help increase the concurrency limits of the org.
- C. Set up failure notifications so that the CRM Analytics consultant gets notified when this happens and can fix the issue.

Answer: A
