

CMMC-CCA Deutsch & CMMC-CCA Exam

Übrigens, Sie können die vollständige Version der PrüfungFrage CMMC-CCA Prüfungsfragen aus dem Cloud-Speicher herunterladen: <https://drive.google.com/open?id=1Aj4ewLSQss1u3qBsi7KBexmkfhLB1cf>

Die Cyber AB CMMC-CCA (Certified CMMC Assessor (CCA) Exam) Zertifizierungsprüfung ist eine Prüfung, die Fachkenntnisse und Fertigkeiten eines Menschen testet. Wenn Sie einen Job in der IT-Branche suchen, werden Sie viele Personalmanager nach den relevanten Cyber AB CMMC-CCA IT-Zertifikaten fragen. Wenn Sie das Cyber AB CMMC-CCA (Certified CMMC Assessor (CCA) Exam) Zertifikat haben, können Sie sicher Ihre Wettbewerbsfähigkeit verstärken.

Cyber AB CMMC-CCA Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> Evaluating Organizations Seeking Certification (OSC) against CMMC Level 2 Requirements: This section of the exam measures skills of cybersecurity assessors and focuses on evaluating the environments of organizations seeking certification at CMMC Level 2. It covers understanding differences between logical and physical settings, recognizing constraints in cloud, hybrid, on-premises, single, and multi-site environments, and knowing what environmental exclusions apply for Level 2 assessments.
Thema 2	<ul style="list-style-type: none"> CMMC Level 2 Assessment Scoping: This section of the exam measures skills of cybersecurity assessors and revolves around determining the proper scope of a CMMC assessment. It involves analyzing and categorizing Controlled Unclassified Information (CUI) assets, interpreting the Level 2 scoping guidelines, and making accurate judgments in scenario-based exercises to define what assets and systems fall within assessment boundaries.

Thema 3	<ul style="list-style-type: none"> • CMMC Assessment Process (CAP): This section of the exam measures skills of compliance professionals and tests knowledge of the full assessment lifecycle. It covers the steps needed to plan, prepare, conduct, and report on a CMMC Level 2 assessment, including the phases of execution and how to document and follow up on findings in alignment with DoD and CMMC-AB expectations.
Thema 4	<ul style="list-style-type: none"> • Assessing CMMC Level 2 Practices: This section of the exam measures skills of cybersecurity assessors in evaluating whether organizations meet the required practices of CMMC Level 2. It emphasizes applying CMMC model constructs, understanding model levels, domains, and implementation, and using evidence to determine compliance with established cybersecurity practices.

Aktuelle Cyber AB CMMC-CCA Prüfung pdf Torrent für CMMC-CCA Examen Erfolg prep

Cyber AB CMMC-CCA ist eine der wichtigsten Zertifizierungsprüfungen. Im PrüfungFrage bearbeiten die IT-Experten durch ihre langjährige Erfahrungen und professionellen IT-Know-how Lernmaterialien, um den Kandidaten zu helfen, die CMMC-CCA Zertifizierung erfolgreich zu bestehen. Mit den Lernmaterialien von PrüfungFrage können Sie 100% die Cyber AB CMMC-CCA Prüfung bestehen. Außerdem bieten wir Ihnen auch einen einjährigen kostenlosen Update-Service.

Cyber AB Certified CMMC Assessor (CCA) Exam CMMC-CCA Prüfungsfragen mit Lösungen (Q101-Q106):

101. Frage

You are a Certified CMMC Assessor (CCA) working with a small defense contractor who needs a CMMC Level 2 assessment. This is their first CMMC assessment. During your initial meeting with the OSC, they express a desire for a quick assessment to minimize disruption to their daily operations. They also mention their limited budget for the assessment. How will you proceed with assessment framing in this scenario?

- A. Define the specific systems, data, and processes in scope for the assessment.
- B. Negotiate the cost of the assessment with the OSC.
- C. Discuss the assessment timeline and resource requirements with the OSC.
- **D. Determine the Rough-Order-of-Magnitude (ROM), by having the C3PAO work with the OSC Assessment Official to determine an anticipated level-of-effort and associated cost estimate to conduct the CMMC Assessment.**

Antwort: D

Begründung:

Comprehensive and Detailed Explanation:

The CMMC Assessment Process (CAP) requires establishing a Rough-Order-of-Magnitude (ROM) during Phase 1 to estimate effort and cost, balancing OSC preferences (speed, budget) with assessment requirements.

This involves collaboration between the C3PAO and OSC Assessment Official. Option B is part of scoping but not the framing step.

Option C is premature, and Option D is secondary to ROM. A is correct per the CAP.

Reference:

CMMC Assessment Process (CAP) v1.0, Section 2.1 (Phase 1: Plan and Prepare), p. 7: "The C3PAO determines the ROM with the OSC."

102. Frage

To transfer CUI between a government client and its internal systems, a defense contractor uses a Secure File-Sharing Application provided by the DoD. However, all data traversing this boundary must pass through a next-generation firewall (NGFW) managed by the contractor's Network Admin. All CUI is stored on a Solid State Drive (SSD) and accessed through a laptop. What type of asset is the Secure File-Sharing Application?

- A. CUI Asset
- B. Security Protection Asset (SPA)
- C. Contractor Risk Managed Asset (CRMA)

- **D. Out of Scope**

Antwort: D

Begründung:

Comprehensive and Detailed Explanation:

The Secure File-Sharing Application, provided and managed by the DoD, operates under the government's authorization boundary, not the contractor's. The CMMC Assessment Scope - Level 2 excludes assets owned and secured by the government from the OSC's scope, as they fall outside the contractor's control. While the contractor uses it to transfer CUI, their responsibility lies in securing their own systems (e.g., NGFW, SSD), not the DoD application. The SSP should document data flow to this application, but it is not assessed as part of the OSC's scope. Option B applies to contractor-managed CUI assets, Option C to security tools, and Option D to risk-managed assets-all inapplicable here.

Reference:

CMMC Assessment Scope - Level 2, Section 2.3.5 (Out-of-Scope Assets), p. 7: "Government-managed assets are out of scope."

103. Frage

CMMC MA.L2-3.7.6 - Maintenance Personnel requires that maintenance personnel without required access authorization be supervised during maintenance activities. One of the ways organizations can achieve this is to develop a documented procedure for supervised maintenance activities. Which of the following elements should be excluded from the documented procedure?

- **A. A detailed list of all CUI assets that the maintenance activity might impact**
- B. The method used to authenticate and monitor the supervisor's activity during the maintenance session
- C. The specific steps authorized for the visiting maintenance personnel with limited access
- D. Contact information for the organization's IT security team in case of emergencies or unexpected issues

Antwort: A

Begründung:

Comprehensive and Detailed In-Depth Explanation:

MA.L2-3.7.6 requires "supervising maintenance personnel without access authorization." Procedures should focus on supervision logistics: steps for personnel (B), IT contact (C), and supervisor monitoring (D). A list of CUI assets (A) is unnecessary and impractical, as it may vary per task and isn't required for supervision, per the CMMC guide.

Extract from Official CMMC Documentation:

* CMMC Assessment Guide Level 2 (v2.0), MA.L2-3.7.6: "Include supervision steps, not asset lists."

* NIST SP 800-171A, 3.7.6: "Examine supervision procedures."

Resources:

104. Frage

A manufacturing company is seeking Level 2 certification. The loading docks are currently accessible directly from the company's main parking lot, which may lead to unauthorized access to facilities. Based on this information, how should this method be modified to BEST meet Level 2 requirements?

- A. Require visitors to check in at the reception desk and maintain a visitor log
- B. Implement physical perimeter controls, such as turnstiles, to limit access.
- **C. Implement physical perimeter controls, such as a gate with a badge system, to limit access to only authorized personnel.**
- D. Implement physical perimeter controls, such as cameras, to limit access to only authorized personnel.

Antwort: C

Begründung:

* Applicable Requirement: PE.L2-3.10.3 - "Control physical access to organizational systems, equipment, and the respective operating environments."

* Why D is Correct: A gate with a badge system represents preventive perimeter control that ensures only authorized personnel can access sensitive areas (e.g., loading docks). This directly aligns with Level 2 physical protection requirements.

Why Other Options Are Insufficient:

* A (Turnstiles): More relevant for internal building entry, not loading docks.

* B (Visitor log): Supports accountability, but does not prevent unauthorized entry.

* C (Cameras): Provides monitoring but not control - surveillance alone does not restrict access.

References (CCA Official Sources):

* NIST SP 800-171 Rev. 2 - PE.L2-3.10.3

* NIST SP 800-171A - PE.L2-3.10.3 Assessment Objectives

* CMMC Assessment Guide - Level 2, Physical Protection

105. Frage

NIST SP 800-171A specifies the assessment methods for defining the nature and the extent of a CCA's actions. What is the purpose of the test assessment method?

- A. To execute a systematic process, procedure, or technique for obtaining security assurance evidence and consistently verifying security assurance claims
- **B. To exercise assessment objects under specified conditions to compare actual with expected behavior**
- C. To review, inspect, observe, or analyze assessment objects
- D. To review compliance with an applicable standard and security assurance claims

Antwort: B

Begründung:

The test assessment method means the assessor actively exercises or stimulates the system (or object) under defined conditions to compare actual results with expected behavior. This goes beyond review or observation and involves hands-on validation.

Exact Extracts:

* NIST SP 800-171A: "The test method is the process of exercising assessment objects under specified conditions to compare actual with expected behavior."

* CMMC Assessment Guide: "Testing requires assessors to observe the execution of functions, mechanisms, or activities to confirm effectiveness." Why the other options are not correct:

* A: This defines Examine (not Test).

* B: This aligns with Interview or compliance review, not Test.

* D: This is a generic definition but does not capture the essence of Test (direct execution under conditions).
