

# Most-honored AZ-305 Preparation Exam: Designing Microsoft Azure Infrastructure Solutions stands for high-effective Training Dumps - PrepAwayTest

What's more, part of that PrepAwayTest AZ-305 dumps now are free: <https://drive.google.com/open?id=1WAei6jNn4jFFrzGhikReRKHwH1FEOUqt>

The AZ-305 dumps of PrepAwayTest include valid AZ-305 questions PDF and customizable Designing Microsoft Azure Infrastructure Solutions (AZ-305) practice tests. Our 24/7 customer support provides assistance to help AZ-305 Dumps users solve their technical hitches during their test preparation. The AZ-305 exam questions of PrepAwayTest come with up to 365 days of free updates and a free demo.

Microsoft AZ-305 exam is an essential certification for IT professionals who want to specialize in designing Azure infrastructure solutions. AZ-305 exam covers a wide range of topics, including Azure compute, storage, networking, security, and monitoring. Passing AZ-305 Exam demonstrates that the candidate has the skills and knowledge required to design and implement efficient Azure infrastructure solutions that meet the needs of their organization.

## Top Features of Microsoft AZ-305 Practice Test Material

The reality is often cruel. What do we take to compete with other people? More useful certifications like Microsoft certificate? Perhaps the few qualifications you have on your hands are your greatest asset, and the AZ-305 test prep is to give you that capital by passing AZ-305 Exam fast and obtain certification soon. Don't doubt about it. More useful certifications mean more ways out. If you pass the AZ-305 exam, you will be welcome by all companies which have relating business with AZ-305 exam torrent.

## Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q153-Q158):

### NEW QUESTION # 153

You plan to move a web application named App1 from an on-premises data center to Azure.

App1 depends on a custom COM component that is installed on the host server.

You need to recommend a solution to host App1 in Azure. The solution must meet the following requirements:

App1 must be available to users if an Azure data center becomes unavailable.

Costs must be minimized.

What should you include in the recommendation?

- A. In two Azure regions, deploy a Traffic Manager profile and a web app.

- B. In two Azure regions, deploy a load balancer and a web app.
- **C. Deploy a load balancer and a virtual machine scale set across two availability zones.**
- D. In two Azure regions, deploy a load balancer and a virtual machine scale set.

**Answer: C**

Explanation:

(<https://docs.microsoft.com/en-us/dotnet/azure/migration/app-service#com-and-com-components>) Azure App Service does not allow the registration of COM components on the platform. If your app makes use of any COM components, these need to be rewritten in managed code and deployed with the site or application. <https://docs.microsoft.com/en-us/dotnet/azure/migration/app-service>

"Azure App Service with Windows Containers If your app cannot be migrated directly to App Service, consider App Service using Windows Containers, which enables usage of the GAC, COM components, MSIs, full access to .NET FX APIs, DirectX, and more."

### NEW QUESTION # 154

You need to design an architecture to capture the creation of users and the assignment of roles. The captured data must be stored in Azure Cosmos DB.

Which Azure services should you include in the design? To answer, drag the appropriate services to the correct targets. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

□

Explanation:

□

1. AAD audit log -> Event Hub (other two choices, LAW, storage, but not available in this question)

<https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/tutorial-azure-monitor-stream-logs-to-event-hub>

2. Azure function has the Event hub trigger and Cosmos output binding

a. Event Hub trigger for function

<https://docs.microsoft.com/en-us/azure/azure-functions/functions-bindings-event-hubs-trigger?tabs=csharp>

### NEW QUESTION # 155

You have an on-premises network that uses an IP address space of 172.16.0.0/16. You plan to deploy 25 virtual machines to a new Azure subscription.

You identify the following technical requirements.

All Azure virtual machines must be placed on the same subnet subnet1.

All the Azure virtual machines must be able to communicate with all on-premises servers.

The servers must be able to communicate between the on-premises network and Azure by using a site-to-site VPN.

You need to recommend a subnet design that meets the technical requirements.

What should you include in the recommendation? To answer, drag the appropriate network addresses to the correct subnet. Each network address may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□

Explanation:

□

### NEW QUESTION # 156

You are developing a multi-tier app named App1 that will be hosted on Azure virtual machines. The peak utilization periods for App1 will be from 8 AM to 9 AM and 4 PM to 5 PM on weekdays.

You need to deploy the infrastructure for App1. The solution must meet the following requirements:

\* Support virtual machines deployed to four availability zones across two Azure regions.

\* Minimize costs by accumulating CPU credits during periods of low utilization.

What is the minimum number of virtual networks you should deploy, and which virtual machine size should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□

### NEW QUESTION # 157

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy various Azure App Service instances that will use Azure SQL databases. The App Service instances will be deployed at the same time as the Azure SQL databases.

The company has a regulatory requirement to deploy the App Service instances only to specific Azure regions. The resources for the App Service instances must reside in the same region.

You need to recommend a solution to meet the regulatory requirement.

Solution: You recommend using the Regulatory compliance dashboard in Microsoft Defender for Cloud.

Does this meet the goal?

- A. Yes
- **B. No**

**Answer: B**

Explanation:

Instead: You should recommend using an Azure Policy initiative to enforce the location.

Note: Azure Resource Policy Definitions can be used which can be applied to a specific Resource Group with the App Service instances.

In Azure Policy, we offer several built-in policies that are available by default. For example:

\* Allowed Locations (Deny): Restricts the available locations for new resources. Its effect is used to enforce your geo-compliance requirements.
