Citrix Virtual Apps and Desktops Administration Sample Questions (Q55-Q60):

NEW QUESTION # 55
Scenario: A Citrix Administrator is configuring the Citrix Workspace app to allow users to access their applications and desktops. Management requires that users can log on to the environment from any device without having to remember the server address. What should the administrator do to meet these requirements?

- A. Deploy and configure the Citrix Workspace app using scripts.
- B. Allow users to download the configuration from Citrix.com.
- C. Configure the Citrix Workspace app using a Group Policy Template File.
- D. Configure a DNS Service Record for the Citrix Workspace app.

Answer: D

Explanation:
By configuring a DNS SRV record pointing to the StoreFront or Citrix Gateway address, users can log on to Citrix Workspace without manually entering a server address. This allows seamless access from any device while meeting management's requirement for ease of use.

NEW QUESTION # 56
On which two components must the Secure Ticket Authority (STA) server locations be configured if a Citrix Administrator wants to configure secure external access to a Citrix Virtual Apps and Desktops Site? (Choose two.)

- A. Delivery Controller
- B. NetScaler Gateway
- C. StoreFront
- D. Citrix Workspace app
- E. Virtual Delivery Agent (VDA)

Answer: B,C

Explanation:
The Secure Ticket Authority (STA) server locations must be configured on both the NetScaler Gateway and StoreFront. This ensures that tickets generated by the STA (on the Delivery Controllers) are validated consistently, enabling secure external access to Citrix resources.

NEW QUESTION # 57
Which feature can a Citrix Administrator use to publish applications from an Application Group, considering only a subset of the machines in the selected Delivery Group?

- A. Limit Visibility
- B. Application Lingering
- C. Tag restriction
- D. Session Sharing

Answer: C

Explanation:
Tag restriction allows an administrator to publish applications from an Application Group but restrict them to run only on a subset of machines within the associated Delivery Group. This provides flexibility in controlling which resources are used for specific applications.

NEW QUESTION # 58
Scenario: A Citrix Administrator is investigating an issue in which a user's session does NOT successfully end after closing the last

published application. The administrator used Task Manager to inspect the hanging session but could NOT find any relevant information. Which tool could the administrator use to get further details on orphaned processes in the session?

- A. Procmon
- B. Handle
- C. Process Explorer
- D. Regmon

Answer: C

Explanation:
Process Explorer provides detailed insight into running processes, their parent-child relationships, and resource usage. It is the best tool to identify orphaned processes that prevent a Citrix session from ending after the last application is closed.

NEW QUESTION # 59
What are three valid ways to configure Virtual Delivery Agent (VDA) registration? (Choose three.)

- A. Group Policy Object (GPO)
- B. CONFIG.XML file
