

# Guide 1z0-076 Torrent - Quiz Oracle Oracle Database 19c: Data Guard Administration Realistic Latest Test Simulations

DOWNLOAD the newest ExamPrepAway 1z0-076 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=13CtT4hgt9kobRAyexQu6qLsX1IN1Kx4>

Our company will promptly update our 1z0-076 exam materials based on the changes of the times and then send it to you timely. 99% of people who use our learning materials have passed the exam and successfully passed their certificates, which undoubtedly show that the passing rate of our 1z0-076 Test Torrent is 99%. If you fail the exam, we promise to give you a full refund in the shortest possible time. So our product is a good choice for you. Choosing our 1z0-076 study tool can help you learn better. You will gain a lot and lay a solid foundation for success.

## Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.</li> </ul>

Topic 7	<ul style="list-style-type: none"> <li>• Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.</li> </ul>
Topic 9	<ul style="list-style-type: none"> <li>• Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.</li> </ul>

## 1z0-076 Latest Test Simulations - 1z0-076 Reliable Exam Papers

In today's competitive technology sector, the Oracle 1z0-076 certification is a vital credential. Many applicants, however, struggle to obtain up-to-date and genuine Oracle 1z0-076 exam questions in order to successfully prepare for the exam. If you find yourself in this circumstance, don't worry since ExamPrepAway has you covered with their real Oracle 1z0-076 Exam Questions. Let's look at the characteristics of these Oracle Database 19c: Data Guard Administration test Questions and how they can help you pass the Oracle 1z0-076 certification exam on the first try.

### Oracle Database 19c: Data Guard Administration Sample Questions (Q36-Q41):

#### NEW QUESTION # 36

Examine the following parameter settings of the physical standby database:

\* STANDBY\_FILE\_MANAGEMENT=AUTO

\* ENABLED\_PDBS\_ON\_STANDBY=<null>

During which TWO tasks are files automatically created in the physical standby database after structure changes on the primary database?

- A. Adding a data file or creating a tablespace
- B. Adding or dropping a redo file group
- C. Performing transportable tablespaces
- D. Creating a PDB from the existing PDB within the same CDB
- E. Renaming a data file in the primary database

**Answer: A,D**

Explanation:

When STANDBY\_FILE\_MANAGEMENT is set to AUTO, the Oracle Data Guard automatically creates, deletes, and renames files on the standby database to match the changes made on the primary database. The tasks that lead to the automatic creation of files on the standby include:

Adding a data file or creating a tablespace (C): When a new tablespace is created or a new data file is added on the primary database, the standby database automatically replicates this action, maintaining structural consistency with the primary database.  
 Creating a PDB from the existing PDB within the same CDB (D): Creating a new Pluggable Database (PDB) within a Multitenant Container Database (CDB) on the primary database triggers an automatic creation of the corresponding PDB within the standby CDB.

#### NEW QUESTION # 37

Which three types of backups offload ..... with the primary database in a data Guard

- A. Broker configuration files
- B. Data files
- C. Control files
- D. Archive logs
- E. Online logs
- F. Password files

**Answer: B,C,D**

Explanation:

In a Data Guard environment, you can offload the backups of certain database components to a physical standby database. Incremental backups of a standby database are interchangeable with the primary database, meaning you can apply a backup taken on a standby database to a primary database and vice versa. This includes control files, data files, and archive logs. Backups of control files and nonstandby control files are interchangeable. You can restore a standby control file on a primary database and a primary control file on a physical standby database, demonstrating their interchangeability and the ability to offload control file backups to one database in a Data Guard environment.

#### NEW QUESTION # 38

Examine the fast-start failover configuration:

- A. A failover may occur if the observer has lost connectivity to the primary database, even if the Fast-Start Failover target standby database has a good connection to the primary database
- B. You must disable fast-start failover first to change the fast-start failover target to East sales.
- C. The observer will initiate a failover when the primary database is unable to produce local archived redo log files.
- D. If South\_Sales develops a problem and cannot be the target of a failover, the broker automatically changes the fast-start failover target to one of the other candidate targets.
- E. The observer is running.

**Answer: A,C,E**

#### NEW QUESTION # 39

Which THREE statements are true about snapshot standby databases?

- A. FLASHBACK DATABASE must be manually enabled on a physical standby database before converting it into a snapshot standby database.
- B. FLASHBACK DATABASE is enabled automatically on a physical standby database as part of the conversion into a snapshot standby database, if not already enabled.
- C. A snapshot standby database may be opened read-only.
- D. FLASHBACK DATABASE is enabled automatically on a snapshot standby database after converting it from a physical standby database if not already enabled.
- E. A snapshot standby database can have Real-Time apply enabled.
- F. A snapshot standby database may be opened read-write.

**Answer: B,D,F**

Explanation:

Snapshot standby databases are a feature of Oracle Data Guard that allows a physical standby database to be temporarily converted into a read-write database for testing or other purposes. The true statements about snapshot standby databases are:  
\* FLASHBACK DATABASE is enabled automatically on a snapshot standby database after converting it from a physical standby database if not already enabled (B): When a physical standby is converted to a snapshot standby, FLASHBACK DATABASE is automatically enabled to allow the database to be easily reverted back to its original state.  
\* FLASHBACK DATABASE is enabled automatically on a physical standby database as part of the conversion into a snapshot standby database, if not already enabled (C): As part of the conversion process, FLASHBACK DATABASE is turned on to ensure that changes made while the database is in snapshot standby mode can be undone.  
\* A snapshot standby database may be opened read-write (E): Once a physical standby is converted to a snapshot standby, it can be opened for read-write operations, allowing for testing and other tasks that require a writable database.

#### NEW QUESTION # 40

Your Data Guard environment contains a four-instance RAC primary database whose SID is PROD and a RAC physical standby database whose std is PROD\_SBY.

Examine the command executed on a node of the primary database cluster to create a service OLTPWORKLOAD that the

applications will use to connect to the database when it is in the PRIMARY database role:

```
srvctl add service -db PROD -service oltpworkload -role PRIMARY -failovertype SESSION -failovermethod BASIC -failoverdelay 10 -failoverretry 150
```

The service is then started. Consider this list of tasks:

1. On a node of the standby database cluster execute:

```
srvctl add service -db PROD_SBY -service oltpworkload -role PRIMARY -failovertype SESSION -failovermethod BASIC -failoverdelay 10 -failoverretry 150
```

2. On the primary database, create the oltpworkload database service using the `dbms_service.create_service` procedure.

3. Configure tap for clients in the `tnsnames.ora` files.

4. Make sure clients use the OLTPWORKLOAD service to connect to the database instances.

5. On the standby database, create the oltpworkload database service using the `dbms_service.create_service` procedure.

Identify the required steps to configure and use Transparent Application Failover (taf).

- A. 0
- B. 2,3,4
- C. 1
- D. 3,4
- E. 1,4
- F. 1,3,4

**Answer: E**

Explanation:

To set up Transparent Application Failover (TAF) in a Data Guard environment with RAC, you would need to:

On a node of the standby database cluster, execute the `srvctl` command to add the oltpworkload service for the PRIMARY role (1): This prepares the standby cluster to provide the oltpworkload service in case a failover occurs, and the standby becomes the primary database.

Make sure clients use the OLTPWORKLOAD service to connect to the database instances (4): This ensures that client connections are directed to the correct service, which is managed by TAF and can fail over in case of a primary database outage.

## NEW QUESTION # 41

.....

Candidates who crack the 1z0-076 examination of the Oracle 1z0-076 certification validate their worth in the sector of information technology. The Oracle 1z0-076 credential is evidence of their talent. Reputed firms hire these talented people for high-paying jobs. To get the Oracle Database 19c: Data Guard Administration (1z0-076) certification, it is essential to clear the Oracle Database 19c: Data Guard Administration (1z0-076) test. For this task, you need to update Oracle Database 19c: Data Guard Administration (1z0-076) preparation material to get success.
