## Reliable Mule-Dev-201 Test Objectives & Mule-Dev-201 Test Pass4sure

To suit customers' needs of the Mule-Dev-201 preparation quiz, we make our Mule-Dev-201 exam materials with customer-oriented tenets. Famous brand in the market with combination of considerate services and high quality and high efficiency Mule-Dev-201 study questions. Without poor after-sales services or long waiting for arrival of products, they can be obtained within 5 minutes with well-built after-sales services.

## Salesforce Certified MuleSoft Developer Sample Questions (Q98-Q103):

### NEW QUESTION # 98

Refer to the exhibit.

```

#%RAML 1.0
title: ACME Airlines
version: 1.0

/flight/:
  get:
    200:
    404:

/airline:
  get:
    queryParameters:
      code: string
    responses:
      200:
      404:

/accounts:
  get:
    responses:
      200:
      404:
  post:
    responses:
      201:

```

How many private flows does APIKIT generate from the RAML specification?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

**NEW QUESTION # 99**

Refer to the exhibits.

```

<flow name="main">
  <http:listener doc:name="HTTP: GET /" config-ref="HTTP Listener Config" path="/" />
  <set-payload value="Success - Begin" doc:name="Success - Begin" />
  <http:request method="GET" doc:name="HTTP: GET /data" url="http://mulearn.mulesoft.com/data"/>
  <set-payload value="Success - End mainFlow" doc:name="Success - End" />
  <error-handler>
    <on-error-continue enableNotifications="true" logException="true" doc:name="On Error Continue">
      <set-payload value="Error" doc:name="Error" />
    </on-error-continue>
  </error-handler>
</flow>

```

A web client submits a request to the HTTP Listener and the HTTP Request throws an error.

What payload and status code are returned to the web client?

Refer to the exhibits. A web client submits a request to the HTTP Listener and the HTTP Request throws an error.

What payload and status code are returned to the web client?

- A. Error response body: error, description Default error response status code: 500
- B. Responsebody: "Success - End" Default response status code: 200
- C. Response body: "Error" Default response status code: 200
- D. Response body: "Success - Begin" Default response status code: 200

Answer: C

Explanation:

Response body: "Error" Default response status code: 200.

1) Payload is successfully set to "Success - Started Flow"

2) When HTTP Request throws an error, execution halts

#[error.description] = "ABC"

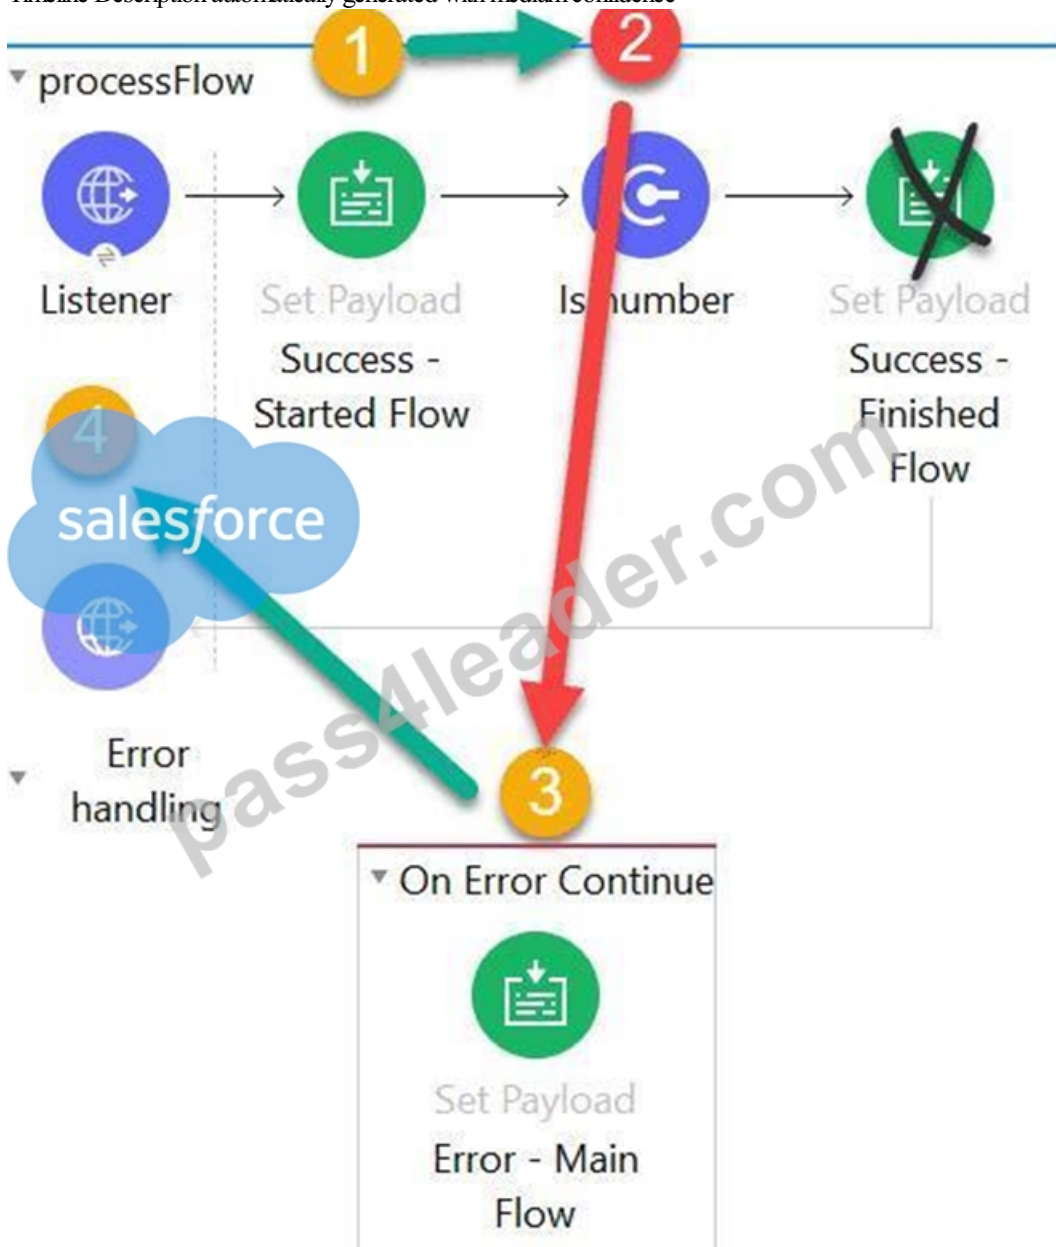

#[error.errorType] = "XYZ"

3) The On Error Continue scope handles the error. When On Error Continue scope is invoked, all the processors in error block are executed and success response is sent back to the client with payload which is set in error flow. In this case payload is set to "Error" value in error block.

4) "Error" is returned to the requestor in the body of the HTTP request with HTTP Status Code: 200 as On error continue always sends success error code.

### NEW QUESTION # 100

Refer to the exhibits. A database Address table contains a ZIPCODE column and an increasing ID column.

The Address table currently contains four (4) records. The On Table Row Database listener is configured with its watermark set to the Address table's ZIPCODE column and then the Mule application is run in Anypoint Studio for the first time, and the On Table Row Database listener polls the Address table.

A new row is added to the database with ID=5 and ZIPCODE=90006, and then the On Table Row Database listener polls the database again.

After the next execution of the On Table Row Database listener polling, what database rows have been processed by the Mule flow since the Mule application was started?

- A. ID ZIPCODE 1 90001 2 90005 3 90009 4 90001
- B. ID ZIPCODE 1 90001 2 90005 3 90009 4 90001 5 90006
- C. ID ZIPCODE 1 90001 2 90005 3 90009 4 90006
- D. ID ZIPCODE 1 90001 2 90005 3 90009

Answer: A

### NEW QUESTION # 101

An API implementation has been deployed to CloudHub and now needs to be governed. IT will not allocate additional vCore for a new Mule application to act as an API proxy.

What is the next step to preserve the current vCore usage, but still allow the Mule application to be managed by API Manager?

- A. Upload the Mule application's JAR file to the API instance in API Manager
  - B. Deploy the same API implementation behind a VPC and configure the VPC to connect to API Manager
- An internal server error occurred.

The clients can consult our online customer service before and after they buy our Salesforce Certified MuleSoft Developer guide dump. We provide considerate customer service to the clients.
