C_AIG_2412無料模擬試験、C_AIG_2412受験対策解説集

21世紀の情報化時代の急流の到来につれて、人々はこの時代に適応できるようにいつも自分の知識を増加していますが、まだずっと足りないです。IT業種について言えば、SAPのC_AIG_2412認定試験はIT業種で欠くことができない認証ですから、この試験に合格するのはとても必要です。この試験が難しいですから、試験に合格すれば国際的に認証され、受け入れられることができます。そうすると、美しい未来と高給をもらう仕事を持てるようになります。JPNTestというサイトは世界で最も信頼できるIT認証トレーニング資料を持っていますから、JPNTestを利用したらあなたがずっと期待している夢を実現することができますようになります。100パーセントの合格率を保証しますから、SAPのC_AIG_2412認定試験を受ける受験生のあなたはまだ何を待っているのですか。速くJPNTestというサイトをクリックしてください。

SAP C_AIG_2412 認定試験の出題範囲:

トピック	出題範囲
トピック 1	SAP AI Core: This section of the exam measures the skills of AI Developers and covers the fundamental components of SAP AI Core. Candidates are assessed on their ability to work with the core services that allow machine learning models to be deployed and managed within SAP environments. The focus is on understanding how AI Core fits into SAP's ecosystem and ensures smooth integration with enterprise applications.

トピック 2	Advanced AI Techniques with SAP's Generative AI Hub: This section of the exam measures the skills of Solution Architects and covers advanced techniques available through SAP's Generative AI Hub. Candidates are assessed on their ability to design, optimize, and scale generative AI solutions that go beyond basic implementations. The focus includes applying sophisticated strategies to integrate advanced models, manage performance, and align AI-driven outcomes with complex enterprise goals.
トピック 3	SAP's Generative AI Hub: This section of the exam measures the skills of Solution Architects and covers SAP's Generative AI Hub, which acts as the central layer for designing and managing generative AI solutions. The exam tests knowledge of building, deploying, and connecting AI models to business scenarios through the Hub. Emphasis is placed on leveraging the Hub to streamline workflows and ensure scalable solutions that align with organizational needs.
トピック 4	Large Language Models (LLMs): This section of the exam measures the skills of AI Developers and covers the practical use of large language models in SAP environments. Candidates are expected to understand how LLMs can be applied to automate tasks, enhance decision-making, and improve user interaction within SAP systems. The exam evaluates knowledge of handling model selection, fine-tuning, and adapting LLMs to specific business cases.

SAP Certified Associate - SAP Generative AI Developer 認定 C_AIG_2412 試験問題 (Q58-Q63):

質問 #58

What must be defined in an executable to train a machine learning model using SAP AI Core? Note: There are 2 correct answers to this question.

- A. Infrastructure resources such as CPUs or GPUs
- B. User scripts to manually execute pipeline steps
- C. Pipeline containers to be used
- D. Deployment templates for SAP AI Launchpad

正解: A、C

解説:

When training a machine learning model using SAP AI Core, defining an executable requires specifying certain key components to ensure the training process is efficient and effective.

1. Pipeline Containers to Be Used:

* Definition: Pipeline containers encapsulate the environments and dependencies necessary for each step of the machine learning workflow, including data preprocessing, model training, and evaluation.

* Specification in Executable: Within the executable, it's essential to define which pipeline containers will be utilized to ensure that each stage of the training process has the appropriate tools and libraries.

質問 #59

You want to download a json output for a prompt and the response.

Which of the following interfaces can you use in SAP's generative AI hub in SAP AI Launchpad?

- A. Prompt management
- B. Administration
- C. Prompt Editor
- D. Chat

正解: A

解説:

* Prompt management is the section within SAP's generative AI hub (accessed via the SAP AI Launchpad) where you work with prompts, including:

* Creating and saving prompts: You can write and store your prompts for later use.

* Viewing prompt history: You can see a record of your past prompts and the AI's responses.

* Exporting prompts and responses: This is where you'd find the option to download your prompt and its corresponding response in

JSON format.

Why the other options are incorrect:

- * A. Chat: The chat interface is where you have interactive conversations with the generative AI. While you can see your conversation history there, you wouldn't typically find options to download it in JSON format.
- * C. Administration: The administration section focuses on managing settings and configurations for the AI hub, not on individual prompts and responses.
- * D. Prompt Editor: While a prompt editor might be used to create and refine prompts, it wouldn't necessarily be the place to manage or download them.

質問 # 60

What are some examples of generative AI technologies? Note: There are 2 correct answers to this question.

- A. AI models that generate new content based on training data
- B. Foundation models
- C. Robotic process automation
- D. Rule-based algorithms

正解: A、B

解説:

Generative AI encompasses technologies that create new content by learning from existing data.

1. AI Models That Generate New Content Based on Training Data:

* Definition: These models analyze large datasets to produce original outputs, such as text, images, or music, that resemble the patterns found in the training data.

* Examples: Models like GPT-4 generate human-like text, while DALL E creates images from textual descriptions.

2. Foundation Models:

* Definition: Foundation models are large-scale AI models trained on extensive data across various domains. They serve as a base for fine-tuning on specific tasks, enabling versatility in applications.

* Examples: Models such as BERT and GPT-3 are foundation models that can be adapted for tasks like translation, summarization, or content generation.

質問 # 61

What is a part of LLM context optimization?

- A. Adjusting the model's output format and style
- B. Providing the model with domain-specific knowledge needed to solve a problem
- C. Reducing the model's size to improve efficiency
- D. Enhancing the computational speed of the model

正解: B

解説:

LLM context optimization involves tailoring a Large Language Model's (LLM) input context to enhance its performance on specific tasks, particularly by incorporating domain-specific knowledge.

1. Understanding LLM Context Optimization:

* Definition: Context optimization refers to the process of adjusting the input provided to an LLM to ensure it includes relevant information, thereby enabling the model to generate more accurate and contextually appropriate outputs.

* Domain-Specific Knowledge Integration: By embedding domain-specific information into the model's context, the LLM can better understand and address specialized queries, leading to improved problem-solving capabilities.

2. Importance of Domain-Specific Knowledge:

* Enhanced Relevance: Providing domain-specific context ensures that the model's responses are pertinent to the particular field or subject matter, increasing the utility of the generated content.

* Improved Accuracy: With access to specialized knowledge, the LLM is less likely to produce generic or incorrect answers, thereby enhancing the overall quality of its outputs.

3. Methods of Context Optimization:

* Prompt Engineering: Crafting prompts that include necessary domain-specific information to guide the model towards generating desired responses.

* Retrieval-Augmented Generation (RAG): Incorporating external data sources into the model's context to provide up-to-date and relevant information pertinent to the domain.

質問 # 62

Which of the following are features of the SAP AI Foundation? Note: There are 2 correct answers to this question.

- A. Joule integration in SAP SuccessFactors
- B. Ready-to-use AI services
- C. AI runtimes and lifecycle management
- D. Open source AI model repository

正解: B、C

質問 # 63
