

ISTQB-CTFL Learning Mode, ISTQB-CTFL Reliable Test Preparation

What's more, part of that Pass4sureCert ISTQB-CTFL dumps now are free: <https://drive.google.com/open?id=1jGilwbCAxWWq0Jkg4yQDtDaTdxsuXCk5>

All questions on our ISTQB-CTFL exam questions are strictly in accordance with the knowledge points on newest test syllabus. Also, our experts are capable of predicating the difficult knowledge parts of the ISTQB-CTFL exam according to the test syllabus. We have tried our best to simply the difficult questions of our ISTQB-CTFL Practice Engine to be understood by the customers all over the world. No matter the students, office staffs, even someone who know nothing about this subject can totally study it without difficulty.

Our ISTQB-CTFL practice materials are on the cutting edge of this line with all the newest contents for your reference. Free demos are understandable materials as well as the newest information for your practice. Under coordinated synergy of all staff, our ISTQB-CTFL practice materials achieved to a higher level of perfection by keeping close attention with the trend of dynamic market. They eliminated stereotypical content from our ISTQB Certified Tester Foundation Level (CTFL v4.0) practice materials. And if you download our ISTQB-CTFL practice materials this time, we will send free updates for you one year long.

Get an Edge in Your Exam Preparation with Online ISTQB ISTQB-CTFL Practice Test Engine Crafted by Experts

Our ISTQB-CTFL study materials are compiled specially for time-sensitive exam candidates if you are wondering. Eliminating all invaluable questions, we offer ISTQB-CTFL practice guide with real-environment questions and detailed questions with unreliable prices upon them and guarantee you can master them effectively. As you see on our website, our price of the ISTQB-CTFL Exam Question is really reasonable and favourable.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q189-Q194):

NEW QUESTION # 189

During iteration planning, a scrum team uses an estimation technique called planning poker to estimate the effort required to deliver a critical user story. In advance of the estimation session, the team agreed on some ground rules to limit the number of poker rounds and save time.

The team agreed on the following:

1. They will use the following progression for estimation: Extra-small, Small, Medium, Large, Extra-large, and Extra-extra-large.
2. If estimation values differ significantly, the highest score will be used for estimation purposes.

The result of the first round of planning poker:

Team Member Estimation

Business Large

Development Extra-extra-large

Testing Extra-extra-large

Which of the following options best represent the team's next actions?

- A. Since the business representative is likely to have the most informed view of the requirement, the user story is categorised as a Large.
- **B. the team discusses the differences in the estimates and repeats the poker round until an agreement is reached.**
- C. The fact that all estimations are high indicate that the user story is not well understood or should be broken down into multiple smaller stories.
- D. The pre-agreed rules state that the highest score should be used for estimation, resulting in the user story being categorised as Extra-extra-large.

Answer: B

Explanation:

In a planning poker session, if there is a significant difference in the estimations, it indicates that there may be misunderstandings or different perspectives on the complexity of the user story. According to the agile principles, the team should discuss these differences to reach a common understanding. The goal is to ensure that all team members have a shared understanding of the user story's scope and complexity before finalizing the estimate.

NEW QUESTION # 190

Which type of software development product can undergo static testing?

- A. Static testing is done only on the requirements You need to execute the software in order to find defects in the code.
- B. Static tests should be performed on the installation and user guide documents as these documents are used by the end user.
- **C. Any software development product can undergo static testing, including requirements specifications, design specifications and code.**
- D. Static testing is done only on the code as part of the "code review" sessions Other documents are reviewed, but not by static testing.

Answer: C

Explanation:

Static testing is a form of testing that does not involve executing the software, but rather analyzing it for defects, errors, or violations of standards. Static testing can be applied to any software development product, including requirements specifications, design specifications, code, test cases, test plans, user manuals, etc.

Static testing can be done by using various techniques such as reviews, inspections, walkthroughs, checklists, static analysis tools, etc. Verified References: A Study Guide to the ISTQB® Foundation Level 2018 Syllabus

- Springer, page 7.

NEW QUESTION # 191

Which of the following statements about static testing and dynamic testing is TRUE?

- **A. Static testing is better suited than dynamic testing for highlighting issues that could indicate inappropriate code modulansation.**
- B. Both dynamic testing and static testing cause failures, but failures caused by static testing are usually easier and cheaper to analyse.
- C. Security vulnerabilities can only be detected when the software is being executed, and thus they can only be detected through dynamic testing, not through static testing
- D. Dynamic testing can only be applied to executable work products, while static testing can only be applied to non-executable work products.

Answer: A

Explanation:

Static testing, such as code reviews and static analysis, is particularly effective at identifying issues related to code structure and modularization. These techniques allow for the inspection of the code without executing it, making it easier to spot problems related to how the code is organized. Dynamic testing, on the other hand, focuses on the execution of code and is better suited for identifying runtime issues but does not easily reveal structural problems. The ISTQB CTFL Syllabus v4.0 highlights the strengths of static testing in uncovering such structural issue

NEW QUESTION # 192

Which of the following is the most correct statement about state testing techniques?

- **A. Static techniques can be used before all code is ready for execution**
- B. Static techniques find more defects than dynamic techniques.
- C. Static techniques can be used by inexperienced users.
- D. Static techniques are always cheaper than dynamic techniques.

Answer: A

Explanation:

State testing techniques are a type of dynamic testing techniques that are based on the behavior of the system under test for different input conditions and events. Dynamic testing techniques require the system to be executed with test cases, whereas static testing techniques do not. Static testing techniques can be applied before the code is ready for execution, such as reviews, inspections, walkthroughs, and static analysis. Static testing techniques can help find defects early in the development process, improve the quality of the code, and reduce the cost and effort of dynamic testing. NEW QUESTION # 193

Which of the following BEST explains a drawback of independent testing?

- A. Having the business organization participate as an independent test team can hurt the overall testing effort since business participants are often not trained nor experienced in testing
- B. An independent test team may possess specializations in specific test types such as usability or security which detract from the overall effectiveness of the test team
- C. Due to their differing backgrounds and perspectives, an independent test team may discover defects which the developers did not uncover
- **D. An independent test team may be isolated from the rest of the development and project team**

Answer: D

Explanation:

Independent testing offers several advantages, such as unbiased testing and detection of different defects.

However, a drawback is that an independent test team may be isolated from the development team and project team. This can lead to communication gaps, reduced collaboration, and a lack of understanding of the project context.

According to the ISTQB Certified Tester Foundation Level (CTFL) syllabus v4.0, an independent test team may not have the same level of understanding of the system as the development team, leading to potential issues in communication and integration (ISTQB not-for-profit association).
