

值得信賴的H35-211_V2.5真題和資格考試中的領先提供者與最新的H35-211_V2.5學習筆記

2026 NewDumps最新的H35-211_V2.5 PDF版考試題庫和H35-211_V2.5考試問題和答案免費分享：https://drive.google.com/open?id=1QViJcep___FGw6w-IYe-QSU1D1rscRxQ

現在IT行業競爭越來越激烈，通過Huawei H35-211_V2.5認證考試可以有效的幫助你在現在這個競爭激烈的IT行業中穩固和提升自己的地位。在我們NewDumps中你可以獲得關Huawei H35-211_V2.5認證考試的培訓工具。我們NewDumps的IT精英團隊會及時為你提供準確以及詳細的關Huawei H35-211_V2.5認證考試的培訓材料。通過我們NewDumps提供的學習材料以及考試練習題和答案，我們NewDumps能確保你第一次參加Huawei H35-211_V2.5認證考試時挑戰成功，而且不用花費大量時間和精力來準備考試。

華為H35-211_V2.5認證考試包括60個多項選擇題，考試時間為90分鐘。此考試的及格分數為1000分中的600分。該考試提供英文和中文兩種語言，在華為授權的測試中心中全球各地的候選人都可以參加。

選擇H35-211_V2.5真題 - 擺脫HCIP-Access V2.5考試困境

我們NewDumps Huawei的H35-211_V2.5考試的問題包含了完整的無限制的轉儲，所以你很容易的通過考試，不管你是通過你的產品合格證或是其他當今流行的身份驗證，完美的展現NewDumps Huawei的H35-211_V2.5考試培訓資料的長處，這不僅僅是依靠，也是指導，這其實是最好的，你可以使用NewDumps Huawei的H35-211_V2.5考試培訓資料裏的問題和答案通過考試，獲得Huawei的H35-211_V2.5考試認證。

華為 H35-211_V2.5（HCIP-Access V2.5）認證考試是為了測試想要專注於網絡接入技術的 IT 專業人士的技能和知識而設計的。該考試是華為認證計劃的一部分，在全球範圍內被認為 IT 專業人士的領先認證計劃之一。HCIP-Access V2.5 認證驗證了求職者計劃、設計、實施和維護華為網絡接入技術的能力。

最新的 HCIP-Access H35-211_V2.5 免費考試真題 (Q81-Q86):

問題 #81

In the NGN system, the () adopts the packet technology to provide a unified integrated transmission platform with high reliability, QoS guarantee, and large capacity.

- A. Core switching layer
- B. Service management layer
- C. Edge access layer
- D. Network control layer

答案：A

解題說明：

In NGN architectures, services (voice, video, data) converge over a packet-based backbone. The core switching layer provides the unified transport using IP/MPLS and related QoS mechanisms, delivering high reliability and large-capacity switching for all upper-layer services. The control and management layers orchestrate services, while the edge/access layer aggregates users-but the packet-based integrated transmission platform itself is the role of the core.

References: HCIP-Access V2.5 study content (NGN overview, layered architecture, and packet-based core transport responsibilities).

問題 #82

OLT can perform traffic shaping through service-port.

- A. True
- B. False

答案： B

解題說明：

On Huawei OLTs, the service-port is a binding between the user-side access (ONT/port) and a VLAN/GEM channel, and it supports traffic policing (CAR/rate-limit) by referencing a traffic/queue profile. Traffic shaping (buffer-based smoothing, token bucket with queue drain) is provided on ports/queues or GEM/LLID directions, not on the service-port object itself. Therefore, shaping is not performed via the service-port; applying a traffic profile there enforces policing, not shaping.

References: HCIP-Access V2.5 Study Guide - OLT QoS Concepts (service-port policing vs port/queue shaping); Huawei OLT QoS & Traffic Management Configuration - service-port CAR and port/GEM shaping behavior.

問題 #83

The (radio) OLT is configured for V2 on the IGMP version when the OLT receives igmp v3 forwarded from on-T What kind of treatment will be done after joining the message

- A. Discard directly
- B. Normal forwarding
- C. Send a universal group query message
- D. Send a specific group query message

答案： A

問題 #84

When the DHCP Option 82 function is enabled globally and in the VLAN service profile and the port/service- port is configured to allow user-side DHCP packets to carry Option 82, what is the processing policy if a user- side DHCP packet already containing Option 82 is received?

- A. The access device strips the Option 82 information from the user-side DHCP packet and forwards the packet.
- B. The access device strips the Option 82 from the user-side DHCP packet and adds the local user information.
- C. The access device discards the user-side DHCP packet.
- D. The access device directly forwards the user-side DHCP packet without any processing.

答案： B

解題說明：

In Huawei access network devices (such as MA5800, EA5800, and SmartAX series), the DHCP Option 82 (Relay Agent Information Option) feature is used to identify the source location of DHCP requests coming from users connected to access ports. This helps the DHCP server assign IP addresses based on access topology information, such as slot, port, and VLAN IDs.

When Option 82 is enabled globally and within the VLAN service profile, and the port/service-port is configured to allow user-side packets to carry Option 82, the device processes incoming DHCP requests as follows:

* If a user-side DHCP packet does not contain Option 82# The device automatically adds local Option 82 information (e.g., circuit ID, remote ID) before forwarding it to the DHCP server.

* If a user-side DHCP packet already contains Option 82# The device removes (strips) the existing Option 82 field to prevent spoofing or inconsistent location data.# Then it adds its own local Option 82 information (accurate relay agent data based on the device's configuration).# The modified packet is then forwarded to the DHCP server.

This ensures that only trusted network-side Option 82 data is passed along, maintaining accurate user-location binding for IP address management and security.

Therefore, the correct behavior is:

The access device strips the Option 82 field from the user packet and adds its own local Option 82 information.

問題 #85

In the evolution of EPON to 10 G EPON, a smooth transition is achieved at the local level by adding WDM WDM modules, and ODNs coexist

- A. True
- B. False

答案：B

問題 #86
