

# New WatchGuard Network-Security-Essentials Exam Online & Network-Security-Essentials Valid Test Camp

## Network Security Essentials Exam Guide

The Network Security Essentials exam tests your knowledge of basic networking and how to configure, manage, and monitor a WatchGuard Firebox. This exam is appropriate for network administrators who have experience configuring and managing Firebox devices that run Fireware v12.4.

### Exam Overview

#### Key Concepts

To successfully complete the Network Security Essentials exam, you must understand these key concepts:

##### Fireware Knowledge

- Firebox activation and initial setup
- Network configuration
- Policy and proxy configuration
- Subscription services configuration
- User authentication
- Device monitoring, logging, and reporting
- Branch office and mobile VPN configuration

##### General Network and Security Knowledge

- IPv4 networking concepts (subnets, DNS, TCP/IP, DHCP, NAT, static routing)
- General understanding of firewalls

Our company attaches great importance on improving the Network-Security-Essentials study prep. In addition, we clearly know that constant improvement is of great significance to the survival of a company. The fierce competition in the market among the same industry has long existed. As for our Network-Security-Essentials exam braindump, our company masters the core technology, owns the independent intellectual property rights and strong market competitiveness. What is more, we have never satisfied our current accomplishments. The highest record is up to five seconds. There has no delay time of the grading process. Slow system response doesn't exist. In addition, the calculation system of the Network-Security-Essentials Test Question is very powerful and stable. We promise that the results of your exercises are accurate.

It is the right time to think about your professional career. The right path is to enroll in Network Security Essentials for Locally-Managed Fireboxes Network-Security-Essentials certification and start preparation with the assistance of WatchGuard Network-Security-Essentials PDF dumps and practice test software. The WatchGuard Network-Security-Essentials PDF Questions file and practice test software both are ready to download. Just pay an affordable WatchGuard Network-Security-Essentials exam dumps charge and download files and software.

## Network-Security-Essentials Valid Test Camp, Test Network-Security-Essentials Dump

If you want to improve your career prospects, obtaining Network Security Essentials for Locally-Managed Fireboxes, Network-Security-Essentials exam certificate is a great way for you. Network Security Essentials for Locally-Managed Fireboxes certificate will help you land a job in the industry. After passing the Network Security Essentials for Locally-Managed Fireboxes you can increase your earning potential. This is because employers are ready to pay more for candidates who have passed the WatchGuard Network-Security-Essentials Certification test. Success in the Network-Security-Essentials exam can impact your promotion. If you are already an employee you can promote yourself to the highest level after passing the WatchGuard Network-Security-Essentials test.

## WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q43-Q48):

### NEW QUESTION # 43

If policies are automatically ordered, which of these policies has the highest precedence? (Select one.)

- A. HTTPS policy - From: Any-Trusted, Any-Optional To: Any-External
- B. Outgoing policy - From: Any-Trusted, Any-Optional To: Any-External
- C. HTTPS policy - From: User1@Firebox-DB To: Any-External
- D. HTTPS policy - From: Trusted To: Any-External

**Answer: C**

Explanation:

When policies are automatically ordered, policies with more specific user-based criteria have higher precedence over general policies. In this scenario, an HTTPS policy for a specific user (e.g., User1@Firebox-DB) would take precedence over policies that apply to broader groups or networks, such as Any-Trusted or Any-Optional. This ordering ensures that individual user rules are evaluated first before generic policies, providing finer access control.

### NEW QUESTION # 44

What does a Firebox configured with default firewall policies do with outbound traffic that does not have a configured route? (Select one.)

- A. Sends the traffic to the default gateway
- B. Sends the traffic to the loopback interface
- C. Denies the traffic
- D. Drops the traffic

**Answer: D**

Explanation:

When a Firebox is configured with default firewall policies and encounters outbound traffic that lacks a specified route, the Firebox will drop this traffic. In firewall configurations, if there's no matching route or policy, the traffic typically gets discarded by default to prevent unintended data leakage or unauthorized connections. This behavior is standard for most firewall devices to ensure secure handling of unconfigured paths.

### NEW QUESTION # 45

A Firebox backup image includes certificates that were previously imported to the Firebox.

- A. False
- B. True

**Answer: B**

Explanation:

A Firebox backup image indeed includes any certificates previously imported to the Firebox. This backup not only contains configurations and policies but also all associated certificates, ensuring that if a restoration is necessary, all security certificates will be restored alongside other settings. This feature is critical for maintaining the integrity and continuity of encrypted connections and secure communications across the Firebox environment.

### NEW QUESTION # 46

When you configure a Branch Office VPN tunnel to a third-party device, AES-GCM encryption is recommended for:

- A. Connections to third-party firewalls only
- **B. Better performance and throughput when supported by both VPN endpoints**
- C. Better uptime because of additional keep-alive options
- D. Routing over a BOVPN
- E. Troubleshooting purposes

**Answer: B**

Explanation:

AES-GCM (Galois/Counter Mode) encryption is recommended for VPNs because it provides strong encryption with high performance and low overhead, making it an ideal choice for environments where both endpoints support it. AES-GCM combines encryption and authentication in a single step, resulting in faster processing compared to traditional encryption modes that handle these tasks separately. This mode is advantageous for maintaining high throughput in VPN tunnels, especially beneficial for branch office or inter-site VPNs where performance is critical.

### NEW QUESTION # 47

What is true about this log message? (Select three.)

- **A. The traffic is allowed outbound through the Firebox**
- B. The traffic is allowed inbound through the Firebox
- **C. The Application Control service has identified the traffic as Gmail**
- D. The Gateway AntiVirus service denied the email traffic because it matches the 18,254 virus signature
- **E. The HTTPS proxy identified a TLS v1.3 connection to the inbox.google.com SNI domain**

**Answer: A,C,E**

Explanation:

Application Control Identifying Gmail Traffic: Application Control is capable of identifying and categorizing applications based on traffic patterns and signatures. In this case, it recognizes Gmail traffic, which is a typical function of Application Control for managing and monitoring web applications. This functionality allows administrators to monitor and control access to applications based on organizational policies.

HTTPS Proxy Identifies TLS v1.3 Connection: The HTTPS proxy in Firebox can inspect and manage encrypted traffic by recognizing details such as the Server Name Indication (SNI) field in TLS connections.

By identifying a TLS v1.3 connection to the inbox.google.com domain, the HTTPS proxy provides additional monitoring and control capabilities over encrypted connections.

Traffic Allowed Outbound Through the Firebox: Given that the log indicates outbound traffic, this confirms that the connection is permitted by the Firebox's policies for outbound traffic. Outbound traffic control is crucial for managing access to external resources and ensuring that only authorized traffic exits the network.

### NEW QUESTION # 48

.....

Every candidate wants to pass the Network-Security-Essentials exam in the least time successfully. More importantly, it is necessary for these people to choose the convenient and helpful Network-Security-Essentials test questions as their study tool in the next time. Because their time is not enough to prepare for the Network-Security-Essentials exam, and a lot of people have difficulty in preparing for the exam, so many people who want to pass the Network-Security-Essentials Exam and get the related certification in a short time are willing to pay more attention to our Network-Security-Essentials study materials as the pass rate is high as 99% to 100%.
