It ensures that candidates know the value of cloud solutions, the key concepts of ERP in the cloud, and how SAP's offering supports digital transformation for businesses.</li> </ul>

## SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q42-Q47):

### NEW QUESTION # 42

What tools enable non-developers to create low/no-code extensions? Note: There are 2 correct answers to this question.

- A. SAP Build
- B. SAP Business Application Studio
- C. SAP Fiori extensibility apps
- D. SAP Cloud SDK

**Answer: A,C**

Explanation:

Tools that enable non-developers to create low/no-code extensions are designed to be user-friendly, requiring minimal to no programming knowledge, allowing business users to tailor applications to their specific needs. Among these tools, SAP Fiori extensibility apps and SAP Build stand out:

\* SAP Fiori extensibility apps: These apps allow users to adapt the user interface and behavior of standard SAP Fiori apps without writing code. Users can personalize forms, fields, and workflows directly within the SAP Fiori environment, making it possible to adjust applications to meet specific business requirements.

\* SAP Build: SAP Build is a suite of tools designed to enable users to create and enhance applications, automate processes, and design business sites with low-code or no-code approaches. It provides a user-friendly interface where users can drag and drop components, set up workflows, and integrate data without needing deep technical expertise.

### NEW QUESTION # 43

In which application can you see the available business context capacity remaining for extension items?

- A. Extensibility Explorer app
- B. Custom Reusable Elements app
- C. Extensibility Cockpit app
- D. Extensibility Inventory app

**Answer: C**

Explanation:

The Extensibility Cockpit app within SAP S/4HANA Cloud Public Edition is a central tool for managing and monitoring the extensibility aspects of the system. It provides an overview of the extension items created, including custom fields, custom business objects, and other extension elements. Importantly, it also shows the available business context capacity remaining for these extension items, which is crucial for ensuring that the system's extensibility is managed within the provided limits. This helps in

planning and managing customizations effectively, ensuring that the system remains scalable and performant.

#### NEW QUESTION # 44

What activities are applied to the entire system and cannot be changed after confirmation in SAP Central Business Configuration?

Note: There are 2 correct answers to this question.

- A. Group currency
- B. Fiscal year variant
- C. Configuration activities
- D. Scoping

**Answer: A,B**

#### NEW QUESTION # 45

What have SAP S/4HANA Cloud Business Workflows been designed for? Note: There are 3 correct answers to this question.

- A. To create complex, repeated work processes with iterative cycles
- B. To create cross-product workflow procedures
- C. To create standard procedures from SAP Signavio Process Navigator
- D. To create business processes with a high number of people involved in a pre-defined sequence
- E. To create very simple release or approval procedures

**Answer: A,B,D**

#### NEW QUESTION # 46

Which of the following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf?

Note: There are 2 correct answers to this question.

- A. An execution variant has not been maintained.
- B. The process steps have been reordered.
- C. The test process failed the execution pre-check.
- D. Data marked for deletion is picked for execution.

**Answer: A,C**

Explanation:

The following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

\* An execution variant has not been maintained: An execution variant is a set of test data that is used to execute a test process. It contains the input values and expected results for each test step. If an execution variant is not maintained for a test process, the system cannot run the test automatically and will skip it1.

\* The test process failed the execution pre-check: The execution pre-check is a validation that is performed before the test execution to ensure that the test process and the execution variant are consistent and complete. If the execution pre-check fails, it means that there are some issues or gaps in the test process or the execution variant that need to be resolved before the test can be run2.

The following would not prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

\* Data marked for deletion is picked for execution: Data marked for deletion is data that is no longer relevant or valid for the test process. It can be marked for deletion by the customer or by SAP. However, this does not affect the test execution, as the system will ignore the data marked for deletion and use the available data for the test process3.

\* The process steps have been reordered: The process steps are the individual actions that are performed as part of the test process. They can be reordered by the customer or by SAP to reflect the changes in the business process or the user interface. However, this does not affect the test execution, as the system will follow the order of the process steps as defined in the test process4.
