Our Certified Information Systems Security Professional (CISSP) (CISSP) practice exam simulator mirrors the CISSP exam experience, so you know what to anticipate on CISSP certification exam day. Our Certified Information Systems Security Professional (CISSP) (CISSP) practice test software features various question styles and levels, so you can customize your ISC CISSP exam questions preparation to meet your needs.

ISC CISSP (Certified Information Systems Security Professional) Exam is a globally recognized certification program for IT security professionals. Certified Information Systems Security Professional (CISSP) certification is designed to validate the knowledge and expertise of individuals in the field of information security. CISSP exam covers a broad range of topics that are essential for securing information systems and protecting them from cyber threats.

To be eligible for the ISC CISSP Certification Exam, candidates must have a minimum of five years of experience in two or more of the eight domains of the CISSP Common Body of Knowledge (CBK). Candidates who do not have the required experience can still take the exam, but will only be awarded an Associate of ISC² designation until they meet the experience requirements.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q1332-Q1337):

NEW QUESTION # 1332

The RSA algorithm is an example of what type of cryptography?

- A. Asymmetric Key.
- B. Symmetric Key.
- C. Private Key.
- D. Secret Key.

Answer: A

Explanation:

An Asymmetric Key is another name for Public Key, RSA is a Public Key cryptographic system.

The following answers are incorrect.

Symmetric Key. Is incorrect because RSA is a Public Key or a Asymmetric Key cryptographic system and not a Symmetric Key or a Secret Key cryptographic system.

Secret Key. Is incorrect because RSA is a Public Key or a Asymmetric Key cryptographic system and not a Secret Key or a Symmetric Key cryptographic system.

Private Key. Is incorrect because Private Key is just one part of an Asymmetric Key cryptographic system, a Private Key used alone is also called a Symmetric Key cryptographic system.

NEW QUESTION # 1333

What is considered the BEST when determining whether to provide remote network access to a third-party security service?

- A. Business need
- B. Contract negotiation
- C. Supplier request
- D. Vendor demonstration

Answer: A

NEW QUESTION # 1334

Which type of attack would a competitive intelligence attack best classify as?

- A. Grudge attack
- B. Financial attack
- C. Business attack
- D. Intelligence attack

Answer: C

Explanation:

Explanation/Reference:

Explanation:

Competitive intelligence is the action of defining, gathering, analyzing, and distributing intelligence about a business including intelligence on products, customers, competitors, and any aspect of the environment needed to support executives and managers making strategic decisions for an organization. A competitive intelligence attack is therefore best classified as a business attack.

Incorrect Answers:

B: A competitive intelligence attack concerns intelligence about a business, not just intelligence in general.

C: A competitive intelligence attack concerns intelligence about a business as a whole, not just the financial dimension.

D: A competitive intelligence is not a grudge attack. It is an attack against a business.
