The Salesforce PDI certification is on trending nowadays, and many IT aspirants are trying to get it. Success in the PDI test helps you land well-paying jobs. Additionally, the Salesforce PDI certification exam is also beneficial to get promotions in your current company. But the main problem that every applicant faces while preparing for the PDI Certification test is not finding updated Salesforce PDI practice questions.

To prepare for the Salesforce PDI Exam, developers can take advantage of a variety of resources, including online training courses, study guides, and practice exams. Salesforce offers a comprehensive online training program called Trailhead, which provides developers with a platform to learn, practice, and test their skills in Salesforce development. Additionally, there are several third-party training providers that offer online courses and practice exams to help developers prepare for the exam.

Salesforce PDI (Platform Developer I (PDI)) Certification Exam is a popular certification program offered by Salesforce, a leading cloud-based customer relationship management (CRM) platform. Platform Developer I (PDI) certification is designed for developers who want to validate their skills and knowledge in building custom applications on the Salesforce platform. It is an entry-level certification that is ideal for developers who are new to Salesforce development.

Your learning will be a pleasant process.

Salesforce Platform Developer I (PDI) Sample Questions (Q48-Q53):

NEW QUESTION # 48

What are two benefits of using External IDs?

Choose 2 answers

- A. An External ID field can be used to reference an ID from another external system.
- B. An External ID is indexed and can improve the performance of SOQL queries.
- C. An External ID can be a formula field to help create a unique key from two fields in Salesforce.
- D. An External ID can be used with Salesforce Mobile to make external data visible.

Answer: A,B

NEW QUESTION # 49

A software company is using Salesforce to track the companies they sell their software to in the Account object. They also use Salesforce to track bugs in their software with a custom object, Bug__c.

As part of a process improvement initiative, they want to be able to report on which companies have reported which bugs. Each company should be able to report multiple bugs and bugs can also be reported by multiple companies.

What is needed to allow this reporting?

- A. Master-detail field on Bug__c to Account
- B. Roll-up summary field of Bug__c on Account
- C. Lookup field on Bug__c to Account
- **D. Function object between Bug__c and Account**

Answer: D

NEW QUESTION # 50

The operation manager at a construction company uses a custom object called Machinery to manage the usage and maintenance of its cranes and other machinery. The manager wants to be able to assign machinery to different construction jobs, and track the dates and costs associated with each job. More than one piece of machinery can be assigned to one construction job.

What should a developer do to meet these requirements?

- A. Create a junction object with Master-Detail Relationship to both the Machinery object and the Construction Job object.
- **B. Create a lookup field on the Construction Job object to the Machinery object.**
- C. Create a lookup field on the Machinery object to the Construction Job object.
- D. Create a Master-Detail Lookup on the Machinery object to the Construction Job object.

Answer: B

NEW QUESTION # 51

Which type of information is provided by the Checkpoints tab in the Developer Console? (Choose 2)

- **A. Namespace**
- B. Debug Statement
- **C. Time**
- D. Exception

Answer: A,C

NEW QUESTION # 52

A software company is using Salesforce to track the companies they sell their software to in the Account object. They also use Salesforce to track bugs in their software with a custom object, Bug__c.

As part of a process improvement initiative, they want to be able to report on which companies have reported which bugs. Each company should be able to report multiple bugs and bugs can also be reported by multiple companies.

What is needed to allow this reporting?

- A. Master-detail field on Bug__c to Account
- B. Roll-up summary field of Bug__c on Account
- C. Lookup field on Bug__c to Account
- **D. Function object between Bug__c and Account**

Answer: D

Explanation:

* Many-to-Many Relationship:

* To track which companies (Accounts) report which bugs and allow multiple associations for both, a junction object is needed.

* This junction object will have two master-detail relationships: one to Bug__c and one to Account.

* Why Not Other Options?

- * A. Roll-up summary field: Not suitable for many-to-many relationships.
 - * B. Master-detail field on Bug_c to Account: Creates a one-to-many relationship, not many-to-many.
 - * C. Lookup field on Bug_c to Account: Still creates a one-to-many relationship, not many-to-many.
