Let me introduce our OGEA-101 study guide to you in some aspects. First of all, there are three versions of OGEA-101 guide quiz. You can choose the most suitable version based on your own schedule. PC version, PDF version and APP version, these three versions of OGEA-101 Exam Materials have their own characteristics you can definitely find the right one for you. Secondly, you can find that our price of the OGEA-101 learning braindumps is quite favorable. And some times, we will give discounts for them.

If you want the OGEA-101 certification to change your life and make it better, what are you waiting for? You should act quickly and make use of spare time of study or work to obtain a OGEA-101 certification and master one more skill. With the help of our OGEA-101 Exam Materials, you will find all of these desires are not dreams anymore. With the high pass rate as 98% to 100%, our OGEA-101 learning questions can help you get your certification with ease.

Pass Guaranteed Quiz 2026 The Open Group Perfect OGEA-101: TOGAF Enterprise Architecture Part 1 Exam Reliable Test Bootcamp

Our windows software and online test engine of the OGEA-101 exam questions are suitable for all age groups. At the same time, our operation system is durable and powerful. So you totally can control the OGEA-101 study materials flexibly. It is enough to wipe out your doubts now. If you still have suspicions, please directly write your questions and contact our online workers. And we will give you the most professions suggestions on our OGEA-101 learning guide.

The Open Group TOGAF Enterprise Architecture Part 1 Exam Sample Questions (Q78-Q83):

NEW QUESTION # 78

Consider the illustration of an architecture development cycle.

Select the correct phase names corresponding to the labels 1, 2 and 3?

- A. 1 Requirements Management - 2 Change Management - 3 Strategy
- B. 1 Requirements Management - 2 Implementation Governance - 3 Preliminary
- C. 1 Continuous Improvement - 2 Migration Planning - 3 Architecture Vision
- D. 1 Architecture Governance - 2 Implementation Governance - 3 Preliminary

Answer: A

NEW QUESTION # 79

Complete the sentence. The purpose of the Gap Analysis technique is to

- A. validate the architecture
- B. establish quality metrics for the architecture
- C. identify non-functional requirements for the architecture
- D. determine service levels for the architecture

Answer: A

Explanation:

Gap Analysis in TOGAF is a technique used to compare the baseline architecture (current state) with the target architecture (future desired state). The output is a set of gaps, representing what is missing or what must change to move from baseline to target. These gaps help validate that the target architecture is adequate:

by identifying what is not addressed, architects can ensure that all required functionality, constraints, and transformation paths are captured. In effect, Gap Analysis validates the architecture by exposing omissions, inconsistencies, or unmet requirements between what is and what should be. It is not primarily about defining service levels, non-functional requirements, or quality metrics (though it helps inform those). Rather, its main role is in validating and guiding closure of architectural gaps.

NEW QUESTION # 80

Consider the illustration of an architecture development cycle.

Select the correct phase names corresponding to the labels 1, 2 and 3?

- A. 1 Requirements Management - 2 Change Management - 3 Strategy
- B. 1 Requirements Management - 2 Implementation Governance - 3 Preliminary
- C. 1 Continuous Improvement - 2 Migration Planning - 3 Architecture Vision
- D. 1 Architecture Governance - 2 Implementation Governance - 3 Preliminary

Answer: A

NEW QUESTION # 81

Which of the following is included as part of Architecture Governance?

- A. Creating and maintaining the Statement of Architecture Work throughout the ADM cycle
- B. Managing Stakeholders and their requirements
- C. Ensuring compliance with internal and external standards and regulatory obligations
- D. Interacting with the CxO level on Enterprise Architecture

Answer: C

Explanation:

Ensuring compliance with internal and external standards and regulatory obligations is one of the activities included as part of Architecture Governance. Architecture Governance is the practice and orientation by which enterprise architectures and other

architectures are managed and controlled at an enterprise-wide level. It involves establishing processes, roles, responsibilities, policies, and standards to ensure that architectures are aligned with the enterprise's strategy and objectives, and meet the quality and performance requirements. Reference: The TOGAF Standard | The Open Group Website, Section 3.3.6 Architecture Governance.

NEW QUESTION # 82

Which of the following describes how the Enterprise Continuum is used when developing an enterprise architecture?

- A. To classify architecture and solution assets
- B. To describe how an architecture addresses stakeholder concerns
- C. To coordinate with the other management frameworks in use
- D. To identify and understand business requirements

Answer: A

Explanation:

The Enterprise Continuum consists of two complementary concepts: the Architecture Continuum and the Solutions Continuum¹. The Architecture Continuum provides a consistent way to describe and understand the generic and reusable architecture building blocks, such as models, patterns, and standards, that can be applied and tailored to specific situations². The Solutions Continuum provides a consistent way to describe and understand the specific and implemented solution building blocks, such as products, services, and components, that realize the architecture building blocks³. The Enterprise Continuum enables the reuse and integration of architecture and solution assets across different levels of abstraction, scope, and detail, ranging from foundation architectures to organization-specific architectures¹.

The Enterprise Continuum is used when developing an enterprise architecture to support the following activities¹:

*Selecting relevant architecture and solution assets from the Architecture Repository or other sources, based on the business drivers, goals, and requirements

*Adapting and customizing the architecture and solution assets to suit the specific needs and context of the enterprise

*Defining and developing the target architecture and the architecture roadmap, based on the gaps and opportunities identified between the baseline and the target states

*Defining and developing the implementation and migration plan, based on the architecture roadmap and the solution building blocks

*Governing and managing the architecture and solution assets throughout the architecture lifecycle, ensuring their quality, consistency, and compliance
