The Manufacturing Cloud is a powerful Salesforce tool that enables manufacturers to manage their sales and operations planning, inventory management, and shop floor operations. It provides a unified view of all the data related to manufacturing processes, helping manufacturers make informed decisions and optimize their operations. The Manufacturing Cloud Accredited Professional certification exam is designed to validate a professional's proficiency in this technology and their ability to leverage it to achieve business objectives.

Salesforce Manufacturing Cloud Accredited Professional Exam Sample Questions (Q44-Q49):

NEW QUESTION # 44
A salesforce Manufacturing cloud user finds that the current sales agreement data is not displaying in tableau CRM for manufacturing. What two possibilities could cause this to happen?

- A. The sales agreement data flow was not updated
- B. Sales agreements are only displayed in the grid
- C. The sales agreement was not added to the data flow
- D. The sales agreement was linked to person accounts

Answer: A,C

Explanation:
The sales agreement data is not displaying in Tableau CRM for Manufacturing because the sales agreement was not added to the data flow or the sales agreement data flow was not updated.
A data flow is a set of instructions that specifies how to integrate, transform, and update data in Tableau CRM1.
To display sales agreement data in Tableau CRM, the sales agreement object must be added to the data flow and the data flow must be run to update the data2.
The sales agreement object is a custom object that stores information about the negotiated terms and conditions between a manufacturer and a customer3.
The sales agreement data flow is a prebuilt data flow that includes the sales agreement object and other related objects, such as account, product, and forecast4.
The sales agreement data flow can be customized to include additional objects or fields, or to apply filters or transformations4.
The sales agreement data flow must be run manually or scheduled to run periodically to ensure that the data in Tableau CRM is up to date4. NEW QUESTION # 45
A salesforce Manufacturing cloud admin wants to change the forecast frequency form quarterly to monthly in the account settings. Which two things do they need to be aware of?

- A. The administrator grants them to right make changes to the forecast settings in the adjustments.
- B. The length of the time that has elapsed since the last change to the forecast setting.
- C. All the previously active account forecasts will expire
- D. A recalculation of the forecast for the accounts added since the least update will be carried out
- E. A full regeneration of all the eligible account forecasts will be carried out.

Answer: C,E

NEW QUESTION # 46
Which two options are recommended to collaborate with channel partners in Manufacturing Cloud?

- A. Visualforce pages
- B. Manufacturing Cloud license for external users
- C. Experience Cloud
- D. External Apps
- E. Lightning Classic Apps

Answer: C,D

Explanation:
To collaborate with channel partners in Manufacturing Cloud, it is recommended to use external apps and Experience Cloud.
External apps are applications that run outside of Salesforce but can integrate with Salesforce data and functionality. They can provide custom solutions for specific business needs and extend the capabilities of Manufacturing Cloud. For example, external apps can enable partners to access inventory levels, order status, product catalogs, and pricing information from Salesforce. Experience Cloud, formerly known as Community Cloud, is a platform that allows you to create branded digital experiences for your customers, partners, and employees. It can help you engage with your channel partners and provide them with self-service tools, collaboration features, and personalized content. For example, Experience Cloud can enable partners to view and update sales agreements, account forecasts, rebates, and targets from Salesforce. It can also help you train and onboard your partners, monitor their performance, and reward them for their achievements. NEW QUESTION # 47
Universal Containers (UC) wants to implement forecasting in Manufacturing Cloud for its stock parts division and engineered-to-order parts division. UC would like to see stock parts on a rolling monthly basis, with forecasted revenue and quantity. Engineered-to-order parts are ordered less frequently, so UC would like to see these on a rolling quarterly basis but with the same two metrics.
What should a Manufacturing Cloud consultant recommend for configuring forecasting?

- A. Configure Advanced Account Forecasting with two forecast sets, two period groups, and two forecast metrics.
- B. Configure Advanced Account Forecasting with one forecast set, two period groups, and two forecast metrics.
- C. Configure Advanced Account Forecasting with one forecast set, two period groups, and four forecast metrics.

Answer: A

Explanation:
To configure forecasting in Manufacturing Cloud, UC needs to create and configure forecast sets, which are the primary building blocks for generating forecasts1.
A forecast set contains information such as the forecast period, the forecast fact object, the forecast frequencies, the data processing engine definitions, the forecast dimensions, and the forecast measures1.
UC has two different divisions with different forecasting needs, so they need to create two forecast sets, one for each division2.
Each forecast set needs to have a different period group, which defines the time periods for forecasting. For the stock parts division, UC needs a monthly period group, and for the engineered-to-order parts division, UC needs a quarterly period group2.
Each forecast set also needs to have two forecast metrics, which are the measures that UC wants to forecast. In this case, UC wants to forecast revenue and quantity for both divisions2.
The other options are incorrect because they do not match the requirements of UC. Option B would create only one forecast set, which would not allow UC to differentiate between the two divisions. Option C would create only two forecast metrics, which would not allow UC to forecast both revenue and quantity.

NEW QUESTION # 48
If an organization would like to apply a rebate program to more than one account, which course of action should be taken to accomplish this requirement?

- A. Add each account to the members related list on the rebate program
- B. Create a new rebate program for each account
- C. Add each account to the rebate benefits related list to the rebate program

Answer: A

Explanation:
Explanation
According to the Salesforce Manufacturing Cloud documentation, to apply a rebate program to more than one account, you need to add each account to the members related list on the rebate program. This way, you can enroll multiple accounts as members of the same rebate program and track their transactions and payouts. You can add one account at a time, or use an existing Accounts list view to enroll multiple members. You can also enroll an account in multiple rebate programs if needed1. References: 1: Enroll Members to a Rebate Program
