How Good Is To Take PassTestking Google Chrome-Enterprise-Administrator Practice Test Material?

PassTestking offers you a free demo version of the Google Chrome-Enterprise-Administrator dumps. This way candidates can easily check the validity and reliability of the Chrome-Enterprise-Administrator exam products without having to spend time. This relieves any sort of anxiety in the candidate's mind before the purchase of Professional Chrome Enterprise Administrator Certification Exam certification exam preparation material. This Chrome-Enterprise-Administrator Exam study material is offered to you at a very low price. We also offer up to 1 year of free updates on Google Chrome-Enterprise-Administrator dumps after the date of purchase. Going through our Professional Chrome Enterprise Administrator Certification Exam exam prep material there remains no chance of failure in the Google Chrome-Enterprise-Administrator exam.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	• Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.
Topic 2	• Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.
Topic 3	• Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
Topic 4	• Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.

Topic 5	• Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.

Use Actual Google Chrome-Enterprise-Administrator to Prevent Mental Hassle

Web-based Chrome-Enterprise-Administrator practice test of PassTestking is accessible from any place. You merely need an active internet connection to take this Google Chrome-Enterprise-Administrator practice exam. Browsers including MS Edge, Internet Explorer, Safari, Opera, Chrome, and Firefox support this Chrome-Enterprise-Administrator Practice Exam. Additionally, this Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) test is supported by operating systems including Android, Mac, iOS, Windows, and Linux.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26
A company is managing browsers in the Google Admin console Security has scanned extensions in the organization and has determined that there are several extensions installed with ability to set proxy This violates company policy How would an administrator block these extensions'?

- A. Set permission policy in the Google Admin console to block such extensions
- B. Set policy in the Google Admin console to block all extensions from being installed on the browser
- C. Remotely connect to each device and delete the extension from the browser
- D. Send an email to the users notifying them that they must uninstall the detected extensions

Answer: A

Explanation:
The Google Admin console allows administrators to control extension permissions. By configuring the
"Permissions and URL access" policy, the administrator can block extensions that request specific permissions, such as the ability to set a proxy. This is a centralized and effective way to enforce the security policy. Remotely connecting to each device (option B) is not scalable. Blocking all extensions (option C) might be too restrictive. Relying on users to uninstall (option D) is not enforceable.

NEW QUESTION # 27
An organization using Chrome browser on Windows has policies from group policy and Chrome Enterprise Core.
In what order are the policies applied?

- A. By the precedence hierarchy
- B. Cloud policy takes precedence
- C. From least restrictive to most restrictive
- D. Group policy takes precedence

Answer: A

Explanation:
When both Group Policy (local machine policy) and Chrome Enterprise Core (cloud policy) are configured on a Windows device, the effective policy is determined by a defined order of precedence. Generally, cloud policies for managed browsers will override conflicting local policies. The specific precedence order is configurable, but it follows a hierarchical structure where certain policy sources take priority over others.
Options C and D present a simplified view that might not always be the case depending on the configuration.

Option B is a general principle of conflict resolution but doesn't describe the specific order in Chrome policy application.

NEW QUESTION # 28

An organization is deploying 50 new devices which will be managed by a Mobile Device Management solution Which method should be used to enroll the Chrome browser on those devices into Chrome Enterprise Core?

- A. Use Google Admin to generate an enrollment token and distribute it using mobile device management software
- B. Generate a single device enrollment token and email it to all users, instructing them to enroll their devices individually
- C. Use Google Admin console bulk enrollment feature to generate a set of unique tokens, and then distribute them via secure file sharing platform
- D. Use Google Admin to generate 50 individual device registration keys and distribute them using mobile device management software

Answer: A

Explanation:
The study guide emphasizes using enrollment tokens generated in the Google Admin console for enrolling browsers. When using an MDM solution, the most efficient and recommended method is to generate a single enrollment token and then deploy it to the devices through the MDM software. This allows for automated and scalable enrollment. Bulk enrollment features in the Admin console are typically for direct enrollment, not through MDM. Individual tokens or keys would be inefficient for a large deployment.

NEW QUESTION # 29

An administrator wants users to have the ability to install extensions of their choosing However, due to company security policies, the administrator cannot allow any extension to be installed that has the ability to read documents on the local drive Which policy combination best meets the administrator's need?

- A. Chrome Webstore: Block all apps, admin manages allowlist; Block extensions by permission: Sync File System
- B. Chrome Webstore: Allow all apps, admin manages blocklist; Runtime Blocked Hosts: file:///*
- C. Chrome Webstore: Allow all apps, admin manages blocklist; Runtime Blocked Hosts: C:*
- D. Chrome Webstore: Allow all apps, admin manages blocklist; Block extensions by permission: File System

Answer: D

Explanation:
To allow users to install extensions while blocking those with specific risky permissions, the administrator should "Allow all apps" from the Chrome Web Store and then use the "Block extensions by permission" policy to block extensions that request the "File System" permission. This prevents extensions from accessing local files. Option A is too restrictive by blocking all apps by default. Options B and D use "Runtime Blocked Hosts," which is for controlling access to specific websites, not for blocking extension permissions.

NEW QUESTION # 30

Chrome Browser Cloud Management has been successfully implemented at a company for the past year.
Recently, the engineering team has received feedback from the security team that Chrome browsers are not meeting patching Service Level Agreements (SLAs). In the Insight report, the engineering team sees that 30% of their companies' browsers are pending updates.
Which browser policy could the engineering team implement to ensure better compliance with the security team's patching requirement?

- A. Chrome browser updates
- B. Auto-update check period
- C. Relaunch notification
- D. Google updater policy precedence

Answer: B

Explanation:
To ensure timely patching, the engineering team should adjust the "Auto-update check period" policy. By shortening this period, Chrome browsers will check for updates more frequently, increasing the likelihood of applying security patches sooner and

improving compliance with patching SLAs. "Chrome browser updates" is a general category, "Relaunch notification" affects when users are prompted to restart, and "Google updater policy precedence" deals with the order of policy application, not the frequency of checks.

NEW QUESTION # 31
......

Choose a good Chrome-Enterprise-Administrator exam quiz and stick with it, you will be successful! Our Chrome-Enterprise-Administrator study questions will provide you with professional guidance and quality resources, but you must also be aware of the importance of adherence. As you know, life is like the sea. Only firm people will reach the other side.
