The customers don't need to download or install excessive plugins or software to get the full advantage from web-based Plat-Arch-202 Practice Tests.

Salesforce Certified Platform Development Lifecycle and Deployment Architect Sample Questions (Q74-Q79):

NEW QUESTION # 74

A team has completed a sprint and intends to deploy these changes after business approval, but they will immediately begin the next sprint.

What strategy should an architect recommend?

- A. Migrate the current code to the UAT sandbox. Begin new sprint development in the Dev sandbox. Make fixes in the UAT environment and deploy UAT for production after business approval.
- B. Commit upcoming changes to the features branch without merging into the develop branch. Deploy from the develop branch and then merge new sprint features into the develop branch.
- C. Using Git, create a release branch from the develop branch. All fixes must be made in the release branch. After deployment, merge release with develop.
- D. The first task of the new sprint must be the deployment approval. After that, the other tasks of the sprint can be performed in the environments and Git.

Answer: C

NEW QUESTION # 75

Universal Containers is having trouble deploying metadata from SIT to UAT. UAT is complaining that it does not recognize some new Salesforce metadata types to be deployed. The deployment from Dev to SIT worked perfectly. What could be the problem?

- A. There is no problem, this is expected behavior.
- B. SIT is on a preview release and UAT is not.
- C. UAT is on a preview release and SIT is not.
- D. Use the DX command line instead.

Answer: B

NEW QUESTION # 76

Universal Containers (UC) is considering updating their Salesforce Release Management process. Which three best practices should UC consider for Release Management? Choose 3 answers

- A. Release sign-off is only required for Production.
- B. Design the right sandbox strategy for the release.
- C. Publish a release calendar for each phase of the release.
- D. Maintain a pre/post deployment checklist for each release.
- E. Regression testing is mandatory for each release.

Answer: B,C,D

NEW QUESTION # 77

Universal Containers has an active production org, and they are planning to release some new features to it next month. The team is working to prepare a deployment plan and reached out to the technical architect for inputs on rollback strategy. What should a technical architect recommend?

- A. Backup the existing metadata using ANT Migration Tool. To roll back deployment, manually delete new components and deploy again to production using backed up metadata.
- B. Create a sandbox from production to take the backup of existing metadata. To roll back deployment, use destructivechanges.xml to delete
- C. Create a sandbox from production to take the backup of existing metadata. To roll back deployment, manually delete new components and then deploy again to production using metadata from this sandbox.
- D. Backup the existing metadata using the ANT Migration Tool. To roll back deployment, deploy again to production using backed up metadata.

Answer: B

NEW QUESTION # 78

Universal Containers business users often observe that newly released features are resulting in other previously existing and stable functionality being broken. Which approach should an Architect recommend to prevent regression?

- A. Freeze development of new features and re-architect the system to remove the bugs
- B. Utilize the developer console to run test suites for the affected functionality

- C. Utilize unit and functional test automation as part of a continuous integration strategy
- D. Utilize Salesforce Apex Hammer to automatically test all functionality

Answer: C

NEW QUESTION # 79

.....
