Overall, the CompTIA PK0-005 certification is an excellent investment for project managers who want to enhance their skills and advance their careers.

## CompTIA Project+ Certification Exam Sample Questions (Q401-Q406):

### NEW QUESTION # 401

A project is moving into the user acceptance testing phase. Several resources will be needed to execute different steps in the testing plan. Which of the following would be the best tool to allow the resources to remain at their desks and only react when needed?

- A. Ticketing system
- B. Videoconference
- C. Simple messaging system
- D. Corporate social media

**Answer: A**

Explanation:

A ticketing system is a tool that allows the project manager to assign, track, and manage tasks for the testing phase. A ticketing system can help the resources to remain at their desks and only react when needed, because they can receive notifications, updates, and feedback on their tickets through email or other channels. A ticketing system can also help the project manager to monitor the progress, quality, and issues of the testing phase, and to generate reports and metrics. A ticketing system is different from a videoconference, which is a tool that allows the project team to communicate and collaborate in real time through audio and video. A videoconference is not suitable for allowing the resources to remain at their desks and only react when needed, because it requires their active participation and attention. A ticketing system is also different from a simple messaging system, which is a tool that allows the project team to exchange text messages and files. A simple messaging system is not effective for assigning, tracking, and managing tasks for the testing phase, because it lacks the features and functions of a ticketing system, such as prioritization, categorization, status, and history. A ticketing system is also different from a corporate social media, which is a tool that allows the project team to share information and ideas through online platforms. A corporate social media is not appropriate for allowing the resources to remain at their desks and only react when needed, because it may not be secure, reliable, or professional for the testing phase. ### NEW QUESTION # 402

During the execution of a project, a project manager wanted to discover how the number of worked hours was affecting the quality of given tasks. For a two-month period, the following data was documented:

Average worked hours

Which of the following describes the result?

- A. A negative correlation exists between the number of mistakes and the working hours.
- B. A low correlation exists between the working hours and the number of mistakes.
- C. A positive correlation exists between the number of mistakes and the working hours.
- D. No correlation exists between the number of mistakes and the working hours.

**Answer: C**

Explanation:

A positive correlation means that as the number of worked hours increases, so does the number of mistakes. According to CompTIA Project+, understanding such correlations is crucial for effective resource and quality management.

### NEW QUESTION # 403

A project sponsor would like to develop a minimum viable product, but the requirements are not well defined. Which of the following should the project sponsor use?

- A. Waterfall
- **B. Agile**
- C. Rational Unified Process
- D. DevOps

**Answer: B**

Explanation:

Agile is a methodology that emphasizes iterative and incremental development, customer collaboration, and responsiveness to change. Agile is suitable for developing a minimum viable product (MVP), which is a version of a product with just enough features to be usable by early customers who can then provide feedback for future product development. Agile allows the project sponsor to deliver an MVP quickly and test it with real users, and then adapt the product based on the feedback and changing requirements. Agile also reduces the risk of wasting time and resources on a product that does not meet the customer's needs or expectations<sup>123</sup>. Reference = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 2: Project Methodologies, p. 55; What is a Minimum Viable Product (MVP)? | Agile Alliance; Minimum Viable Product (MVP): What is it & Why it Matters - Atlassian

#### **NEW QUESTION # 404**

A project sponsor requires a system that is capable of providing integrated management of all the business's core functions. Which of the following systems is the project sponsor describing?

- A. CRM
- B. EDRMS
- **C. ERP**
- D. CMS

**Answer: C**

Explanation:

ERP (Enterprise Resource Planning) systems are designed to integrate and manage all core functions of a business, such as finance, HR, and supply chain management. This aligns with CompTIA Project+ guidelines on selecting appropriate systems for organizational needs.

#### **NEW QUESTION # 405**

In order to complete a major project deliverable, very specialized resources are required for some tasks. The PM failed to take into consideration during planning that the required resources would be available for fewer hours than required. Which of the following should the PM do first to make schedule changes?

- A. Raise a change request.
- **B. Perform an impact analysis.**
- C. Escalate to the sponsor.
- D. Add a new risk.

**Answer: B**

Explanation:

According to A Guide To Schedule Updating in Project Management, one of the best practices for effective schedule updating is to perform an impact analysis before making any changes to the schedule. An impact analysis helps the project manager to assess the effects of the change on the project scope, cost, quality, risk, and stakeholder expectations. It also helps to identify the best options for resolving the issue and minimizing the negative impacts. By performing an impact analysis first, the project manager can make informed decisions and communicate them clearly to the project team and stakeholders.
