You can absolutely assure about the high quality of our products, because the contents of D-ISM-FN-01 training materials have not only been recognized by hundreds of industry experts, but also provides you with high-quality after-sales service. Before purchasing D-ISM-FN-01 exam torrent, you can log in to our website for free download. During your installation, D-ISM-FN-01 exam questions hired dedicated experts to provide you with free remote online guidance. During your studies, D-ISM-FN-01 Exam Torrent also provides you with free online services for 24 hours, regardless of where and when you are, as long as an email, we will solve all the problems for you. At the same time, if you fail to pass the exam after you have purchased D-ISM-FN-01 training materials, you just need to submit your transcript to our customer service staff and you will receive a full refund.

You may doubt that how can our D-ISM-FN-01 exam questions be so popular and be trusted by the customers all over the world. To create the best D-ISM-FN-01 study materials, our professionals have been devoting all their time and efforts. They have revised and updated according to the syllabus changes and all the latest developments in theory and practice, so our D-ISM-FN-01 Practice Braindumps are highly relevant to what you actually need to get through the certifications tests.

Valid Exam D-ISM-FN-01 Blueprint | D-ISM-FN-01 Detailed Answers

Our D-ISM-FN-01 practice materials are your optimum choices which contain essential know-hows for your information. If you really want to get the certificate successfully, only D-ISM-FN-01 practice materials with intrinsic contents can offer help they are preeminent materials can satisfy your both needs of studying or passing with efficiency. You may stand on some issues at sometimes, all confusions will be answered by their bountiful contents. Wrong choices may engender wrong feed-backs, we are sure you will come a long way by our D-ISM-FN-01 practice material.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29

Question:

In traditional provisioning, which two factors determine the availability, capacity, and performance of the RAID set?

- A. Capacity of drives
- B. Make of drives
- C. The number of drives in the RAID set
- D. The RAID level

Answer: C,D

Explanation:

In traditional storage provisioning, the RAID configuration significantly impacts the storage system's characteristics:

- * RAID Level: Determines data redundancy and fault tolerance. For example, RAID 1 mirrors data, providing high availability, while RAID 5 uses parity, balancing performance and redundancy.
- * Number of Drives: Affects both capacity and performance. More drives can increase total storage capacity and improve performance through parallel data access.
- * Make of Drives: While drive quality matters, it's less influential than RAID configuration in determining overall system characteristics.
- * Capacity of Drives: Impacts total storage size but doesn't directly influence performance or availability as significantly as RAID level and drive count.

NEW QUESTION # 30

Question:

An Ethernet switch has eight ports, and all ports must be operational for 24 hours from Monday through Friday. However, failures of Port 6 occur within the week as follows:

- * Tuesday: 6 AM to 8 AM
- * Thursday: 5 PM to 10 PM
- * Friday: 7 AM to 9 AM

What is the MTBF (Mean Time Between Failures) of Port 6?

- A. 37 hours
- B. 32 hours
- C. 30 hours
- D. 40 hours

Answer: D

Explanation:

To calculate the MTBF, we need to determine the total operational time and the number of failures.

* Total operational time (Monday to Friday): $5 \text{ days} \times 24 \text{ hours} = 120 \text{ hours}$

* Number of failures: 3 (Tuesday, Thursday, Friday)

MTBF = Total operational time / Number of failures

MTBF = $120 \text{ hours} / 3 = 40 \text{ hours}$

NEW QUESTION # 31

Question:

In continuous data protection, what does the amount of journal space determine?

- A. Length of time required to recover the data
- B. How far back the data can be recovered
- C. Amount of space the source and replica volumes require
- D. Amount of data that can be restored to a specific point

Answer: B

Explanation:

In continuous data protection (CDP), journal space stores all the changes made to data over time. The amount of journal space determines the retention window, i.e., how far back in time data can be recovered. A larger journal allows for a longer recovery window.

* Amount of space the source and replica volumes require:Relates to storage capacity, not recovery time.

* Length of time required to recover the data:Depends on system performance and data size.

* Amount of data that can be restored to a specific point:Depends on the changes captured in the journal.

NEW QUESTION # 32

Question:

What information is available in a capacity planning report for storage infrastructure?

- A. Current and historical information about the utilization of storage, file systems, and ports
- B. Current and historical performance information about IT components and operations
- C. Equipment purchase dates, licenses, lease status, and maintenance records
- D. Number of units of storage available, used, and the cost

Answer: A

Explanation:

Capacity planning reports in storage environments focus on:

* Utilization trends of storage systems (e.g., used vs. available space)

* File system usage (volumes, file systems)

* Ports (SAN/NAS connections)

This enables proactive capacity management and ensures enough resources are available to meet future demands.

NEW QUESTION # 33

Question:

Refer to the Exhibit (Port marked "X"): What type of FC port does the "X" represent?

- A. E_port
- B. N port
- C. F_port
- D. NL port

Answer: A

Explanation:

The exhibit shows a Fibre Channel (FC) switch connected to another FC switch. The port "X" is used for inter-switch link (ISL) connectivity, which is characteristic of an E_port (Expansion Port).

* F_port (Fabric port): Connects an N_port (host or storage device) to a switch.

* N_port (Node port): End device port in FC networks (like HBA in hosts or storage).

* NL_port (Node Loop port): Used for Arbitrated Loop topologies.

* E_port: Connects two FC switches together for ISL, which is exactly what's shown in the exhibit.
