Topic 5	<ul style="list-style-type: none">Configure ChromeOS policies: This topic discusses understanding and configuring ChromeOS policies.

Google Professional ChromeOS Administrator Exam Sample Questions (Q37-Q42):

NEW QUESTION # 37

A school wants all new Chromebooks to be enrolled through zero-touch enrollment (ZTE) in their parent organization unit. An admin needs to create tokens.

Where will the admin go to generate the enrollment tokens for Chromebooks?

- A. Devices > Chrome > Settings
- B. Devices > Chrome > Connectors
- C. **Devices > Chrome > Enroll**
- D. Devices > Chrome > Devices > Enroll

Answer: C

Explanation:

To set up Zero-Touch Enrollment (ZTE), an administrator must go to Devices > Chrome > Enroll within the Admin console. This is where they can generate the necessary enrollment tokens for automatic enrollment of devices when they first connect to the Internet. Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Zero-Touch Enrollment Guide, which specifies the steps to generate enrollment tokens.

"To create Zero-Touch Enrollment tokens, go to Devices > Chrome > Enroll in the Admin console." Zero-Touch Enrollment simplifies the setup process for educational institutions by automatically enrolling devices into management without manual intervention.

Objectives:

- * Automate device enrollment using Zero-Touch.
- * Simplify ChromeOS deployment in educational environments.

NEW QUESTION # 38

You are asked why ChromeOS devices do not require additional antivirus software. How should you respond?

- A. The Admin console automatically deploys antivirus software to enrolled ChromeOS devices and is included in the Chrome

Enterprise/Education Upgrade

- B. As part of a multi-layered security approach ChromeOS uses a read-only operating system which cannot be affected by viruses
- C. Every time ChromeOS updates, it automatically updates the antivirus software on the device
- D. Every ChromeOS device is pre-installed with antivirus software which automatically updates during the life of the device

Answer: B

Explanation:

ChromeOS is designed with multiple layers of security to protect against malware and viruses:

* Read-only file system: Most of the operating system is stored in a read-only partition, making it difficult for malware to modify critical files.

* Verified boot: Ensures the integrity of the operating system during bootup, preventing tampering by unauthorized software.

* Sandboxing: Isolates different processes and websites, limiting the potential damage of any malware that manages to get through.

* Automatic updates: Regularly delivers security patches and updates to address vulnerabilities.

While ChromeOS doesn't come with traditional antivirus software, its built-in security features provide robust protection against most threats.

NEW QUESTION # 39

You're in charge of deploying video conferencing equipment and it has been decided that you will leverage ChromeOS devices. What initial considerations should you make when deciding on devices?

- A. A form factor compatible for both remote and site workers is required
- B. A precise time window on how to apply security patches and updates to all devices
- C. Deploying instructional guides to all users on setup configuration, and use of new equipment
- D. Devices must have 8GB of RAM and obey supported processor models

Answer: A

Explanation:

When deploying video conferencing equipment using ChromeOS devices, the primary consideration is choosing a form factor (device type) that caters to both remote and on-site workers. This ensures flexibility and consistent user experience regardless of location.

Option A is incorrect because while instructional guides are helpful, they are a secondary concern to device suitability.

Option C is incorrect because security patch timing is important but not the initial consideration when choosing devices.

Option D is incorrect because while specifications matter, they should align with the chosen form factor and user needs.

NEW QUESTION # 40

An organization has created organization units within the Google Admin console for additional management structure. What is the most effective way to manage each OU while not affecting the top-level OU policy?

- A. Disable auto updates
- B. Force inheritance from top level OU to all OUs
- C. Delete sublevel OUs and only work from the top level OU
- D. Override the inheritance for a given policy

Answer: D

Explanation:

To apply specific settings to a sub-OU without affecting the parent OU or top-level policy, you should override the inheritance for that particular policy. This approach ensures that the sub-OU has customized settings while the parent OU policies remain intact.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console OU Management Guide, which recommends overriding inherited policies for specific OUs when unique settings are required.

"To apply distinct settings to an OU without affecting higher-level OUs, override the inherited settings. This approach keeps parent policies intact." Overriding inheritance is essential for managing diverse device groups within large organizations, allowing flexibility in policy application.

Objectives:

* Customize OU settings efficiently.

* Maintain organizational policy consistency.

NEW QUESTION # 41

After deploying your Android VPN client, you want to enforce always-on VPN. Where is this configured?

- A. via JSON configuration with the deployed application
- B. Device settings - Always-on VPN
- C. Network settings - Always-on VPN
- D. User settings - Always-on VPN

Answer: A

Explanation:

To enforce always-on VPN on ChromeOS, you need to use JSON configuration within the deployed VPN application settings. This method allows you to configure the VPN client to stay connected at all times, which is crucial for maintaining secure connections, especially in enterprise environments.

Verified Answer from Official Source:

The correct answer is verified from the ChromeOS VPN Configuration Guide, which specifies that JSON files are used to configure advanced VPN settings, including the always-on feature.

"To enforce an always-on VPN, configure the JSON settings file within the VPN client deployment. This setting ensures that the VPN remains active whenever the device is online." Using JSON configuration provides granular control over VPN settings and ensures the VPN remains active, reducing security risks associated with open network connections.

Objectives:

- * Implement secure VPN configurations on ChromeOS.
- * Enforce always-on VPN to protect data transmission.

NEW QUESTION # 42

.....

If you want to take the ChromeOS-Administrator exam then keep in your mind that proper Professional ChromeOS Administrator Exam preparation is the key to success.
