질문 # 49
An administrator is working with a development team to integrate a customer service application with a large language model deployed on the Nutanix Enterprise AI platform. The model provides natural language responses, and the secure application needs to send user input and receive model-generated replies in real time.
The following requirements must be met:
The application must be connected to the correct API endpoint exposed by the model.
A valid API key must be used to authenticate each request.
The response format must match the expected schema in the application.
The administrator must test and confirm successful communication before production rollout.
Which step should the administrator perform to configure and validate the application successfully?

- A. Set up the application in the hypervisor management interface and validate access using VM-level health checks.
- B. Confirm the response meets requirements using the copied endpoint URL and API key from the portal.
- C. Expose the model endpoint publicly by assigning an external IP address and bypass authentication for faster testing.
- D. Configure access to the endpoint by assigning the application a role in Prism Central.

정답： B

질문 # 53
Here is the text converted from the uploaded image:
An Accounting Department is thrilled with the RAG Application that the Application & Data Science Teams recently rolled out. However, they provided some feedback that sometimes (approximately 20% of the time), the documents retrieved are not relevant to their prompts or are too generiC.
During development, there was extensive testing between models to make sure the best possible model was selecteD. The Accounting Department emphasizes that when the responses use the right documents, the results are very good and they are pleased with the completeness, accuracy, and coherence of those responses.
What would be a way to address the irrelevant RAG results without having to rebuild the entire workflow?

- A. Implement a rerank model as a post retrieval step to re-order initially retrieved documents based on query-document relevance.
- B. Fine-tune the Large Language Model on a broader dataset to enable it to generate more relevant responses.
- C. Significantly expand the document knowledge base by ingesting a much larger volume of financial reports.
- D. Replace the embedding model with a larger, more general-purpose language model to improve document retrieval.
