The CISM certification is widely recognized by employers as a benchmark for measuring the competency of their information security managers. It is also considered as one of the top certifications for security professionals who wish to advance their careers in the field of cybersecurity. Certified Information Security Manager certification exam covers four domains, which are Information Security Governance, Risk Management, Information Security Program Development and Management, and Information Security

## Incident Management.

ISACA CISM (Certified Information Security Manager) Certification Exam is a globally recognized certification that validates the expertise of information security professionals in managing, designing, and assessing an organization's information security programs. The CISM Certification is designed for professionals who are responsible for information security management, such as information security managers, information security officers, and IT security consultants. Certified Information Security Manager certification is issued by ISACA, a leading global professional association that provides knowledge, certifications, and community for information systems professionals.

## ISACA Certified Information Security Manager Sample Questions (Q417-Q422):

### NEW QUESTION # 417

Which of the following should be an information security manager's FIRST course of action when one of the organization's critical third-party providers experiences a data breach?

- A. Monitor the third party's response.
- B. **Invoke the incident response plan.**
- C. Inform the public relations officer.
- D. Inform customers of the breach.

### Answer: B

Explanation:

The first course of action when one of the organization's critical third-party providers experiences a data breach is to invoke the incident response plan, which means activating the incident response team and following the predefined procedures and protocols to respond to the breach. Invoking the incident response plan helps to coordinate the communication and collaboration with the third-party provider, assess the scope and impact of the breach, contain and eradicate the threat, recover the affected systems and data, and report and disclose the incident to the relevant stakeholders and authorities.

### NEW QUESTION # 418

In an organization with a rapidly changing environment, business management has accepted an information security risk. It is MOST important for the information security manager to ensure:

- A. compliance with the risk acceptance framework
- B. **the acceptance is aligned with business strategy.**
- C. change activities are documented
- D. the rationale for acceptance is periodically reviewed

### Answer: B

### NEW QUESTION # 419

To ensure the information security of outsourced IT services, which of the following is the MOST critical due diligence activity?

- A. **Review a recent independent audit report of the service provider.**
- B. Request the service provider comply with information security policy.
- C. Review samples of service level reports from the service provider.
- D. Assess the level of security awareness of the service provider.

### Answer: A

### NEW QUESTION # 420

The PRIMARY advantage of performing black-box control tests as opposed to white-box control tests is that they:

- A. require less IT staff preparation

- B. cause fewer potential production issues
- C. identify more threats
- D. simulate real-world attacks

**Answer: D**

## NEW QUESTION # 421

Which of the following is the **MAIN** objective in contracting with an external company to perform penetration testing?

- A. To receive an independent view of security exposures
- B. To identify a complete list of vulnerabilities
- C. To have an independent certification of network security
- D. To mitigate technical risks

**Answer: A**

### Explanation:

## Section: INFORMATION SECURITY PROGRAM MANAGEMENT

### Explanation:

Even though the organization may have the capability to perform penetration testing with internal resources, third-party penetration testing should be performed to gain an independent view of the security exposure.

Mitigating technical risks is not a direct result of a penetration test. A penetration test would not provide certification of network security nor provide a complete list of vulnerabilities.

## NEW QUESTION # 422
