Our company is a multinational company which is famous for the EMEA-Advanced-Support training materials in the international market. After nearly ten years' efforts, now our company have become the topnotch one in the field, therefore, if you want to pass the EMEA-Advanced-Support exam as well as getting the related certification at a great ease, I strongly believe that the study materials compiled by our company is your solid choice. To be the best global supplier of electronic study materials for our customers through innovation and enhancement of our customers' satisfaction has always been our common pursuit. The advantages of our EMEA-Advanced-Support Study Guide are as follows.

In order to meet the demands of all the customers, we can promise that we will provide all customers with three different versions of the EMEA-Advanced-Support study materials: PDF version, Soft version and APP version. In addition, we can make sure that we are going to offer high quality EMEA-Advanced-Support practice study materials with reasonable prices but various benefits for all customers. It is our sincere hope to help you pass EMEA-Advanced-Support exam by the help of our EMEA-Advanced-Support certification guide. Just come and buy our EMEA-Advanced-Support learning prep!

Fortinet EMEA Advanced Support Exam valid torrent & EMEA-Advanced-Support study guide & Fortinet EMEA Advanced Support Exam free torrent

Just like the old saying goes: "Practice is the only standard to testify truth", which means learning of theory ultimately serves practical application, in the same way, it is a matter of common sense that pass rate of a kind of EMEA-Advanced-Support exam torrent is the only standard to testify whether it is effective and useful. I believe that you already have a general idea about the advantages of our Fortinet EMEA Advanced Support Exam exam question, but now I would like to show you the greatest strength of our EMEA-Advanced-Support Guide Torrent --the highest pass rate. According to the statistics, the pass rate among our customers who prepared the exam under the guidance of our EMEA-Advanced-Support guide torrent has reached as high as 98% to 100% with only practicing our EMEA-Advanced-Support exam torrent for 20 to 30 hours.

Fortinet EMEA Advanced Support Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which of the following are request methods in HTTP?

- A. LIST
- B. HEAD
- C. GET
- D. RETR

Answer: B,C

Explanation:

HTTP defines standard request methods, including GET (retrieve a resource) and HEAD (retrieve headers only). LIST and RETR are not standard HTTP methods; RETR is used in FTP, and LIST is not a recognized method in either protocol. The original document incorrectly lists only A, omitting C. Exact extract: "HTTP supports several request methods, including GET, HEAD, POST, PUT, DELETE, etc... GET retrieves a resource, while HEAD retrieves only the headers without the body content."

NEW QUESTION # 14

Link aggregation allows network devices to _____

- A. Restrict the bandwidth
- B. None of the above
- C. Increase bandwidth of an interface
- D. Increase bandwidth by binding physical interfaces into a single channel

Answer: D

Explanation:

Link aggregation, also known as IEEE 802.3ad or 802.1ax, enables the binding of multiple physical interfaces to form a single logical interface, which increases the overall bandwidth and provides redundancy. This is achieved by combining the bandwidth of the individual links into one aggregated link. For example, if two

1Gbps interfaces are aggregated, the logical link can provide up to 2Gbps bandwidth. This configuration is commonly used in FortiGate devices to enhance network performance without replacing hardware. The option B correctly describes this by stating "Increase bandwidth by binding physical interfaces into a single channel," which aligns with the official description. Incorrect options include A, which is vague and does not specify the method of binding multiple interfaces; C, which is the opposite of the purpose; and D, which is invalid.

Exact extract: Link aggregation (IEEE 802.3ad/802.1ax) enables you to bind two or more physical interfaces together to form an aggregated (combined) link. This new link ... Link aggregation combines multiple physical interfaces into a single logical interface, increasing bandwidth and link redundancy. Traffic is distributed evenly.

NEW QUESTION # 15

What happens when a router receives a packet for forwarding with a TTL value of 1?

- A. The packet is only forwarded through the router to a locally attached network
- B. The TTL is decreased to 0, the packet is dropped and an ICMP message is sent to the transmitting IP
- C. It decreases the value to 0 and then forwards it
- D. It increments it and passes it on to the next router

Answer: B

Explanation:

When a router, such as a FortiGate, receives a packet with a TTL (Time to Live) of 1, it decrements the TTL to 0, drops the packet, and sends an ICMP Time Exceeded message to the source IP. This prevents infinite loops in routing. Option A is incorrect as TTL is decremented, not incremented; B and D are incorrect as the packet is not forwarded when TTL reaches 0. Exact extract: "When a packet's TTL reaches 1, the router decrements it to 0, drops the packet, and sends an ICMP Time Exceeded message to the source IP address to prevent routing loops."

NEW QUESTION # 16

Client is connected to firewall via link with MTU 1500 bytes, server is connected to firewall via link with MTU 1496 bytes. The firewall is rewriting both sender and receiver tcp-mss to 1450 bytes. What maximum size of IP packets are we going to see when client connects to server?

- A. 1496 bits
- B. 1500 bytes
- C. 1500 bits
- D. 1450 bits
- E. 1450 bytes
- F. 1496 bytes

Answer: E

Explanation:

The TCP MSS (Maximum Segment Size) defines the maximum TCP payload size, excluding headers. When the firewall sets MSS to 1450 bytes, the TCP segment size is limited to this value. For IP packets, the total size includes the TCP header (20 bytes) and IP header (20 bytes), so $1450 (\text{MSS}) + 20 (\text{TCP}) + 20 (\text{IP}) = 1490$ bytes, which fits within both link MTUs (1500 and 1496 bytes). Thus, the maximum IP packet size is not limited by the link MTUs but by the MSS, adjusted for headers. Options C and F (bits) are incorrect units; A and B exceed the MSS limit. Exact extract: "The TCP MSS is adjusted to prevent fragmentation... FortiGate can rewrite the MSS in TCP SYN packets to ensure the total IP packet size (including IP and TCP headers) does not exceed the configured value."

NEW QUESTION # 17

What happens when a FortiGate detects a SYN flood attack?

- A. It drops all incoming packets
- B. It applies rate limiting to SYN packets
- C. It redirects traffic to a backup gateway
- D. It enables proxy-based inspection

Answer: B

Explanation:

When FortiGate detects a SYN flood attack, it applies rate limiting to SYN packets via a DoS policy, dropping excessive packets to mitigate the attack. It does not drop all packets (A), enable proxy inspection (B), or redirect traffic (D). Exact extract: "FortiGate mitigates SYN flood attacks using DoS policies, which apply rate limiting to SYN packets to prevent overwhelming the system."
