Plat-Dev-210 Latest Test Format | Plat-Dev-210 Exam Reviews

Generally speaking, a satisfactory practice material should include the following traits. High quality and accuracy rate with reliable services from beginning to end. As the most professional group to compile the content according to the newest information, our Plat-Dev-210 practice materials contain them all, and in order to generate a concrete transaction between us we take pleasure in making you a detailed introduction of our Plat-Dev-210 practice materials. We would like to take this opportunity and offer you a best Plat-Dev-210 practice material as our strongest items as follows. Here are detailed specifications of our product.

Salesforce Certified Omnistudio Developer Sample Questions (Q124-Q129):

NEW QUESTION # 124

A developer needs to create a list of cases for an account in a single Datable in a FlexCard. Like the one shown below.

Origin	Type	Subject	Status	Created	Case Number	Priority
Web	Mechanical	Generator won't start	New	2020-07-22T00:22:42.000Z	000000028	High
Phone	Electrical	Component missing	Escalated	2020-07-22T00:21:41.000Z	000000027	High
Phone	Electrical	Starting generator after electrical failure	Escalated	2020-02-27T22:28:20.000Z	000000000	High
Web	Other	Easy installation process	Closed	2020-02-27T22:28:20.000Z	000000003	Low
Web	Mechanical	Shutting down of generator	Closed	2020-02-27T22:28:20.000Z	000000017	Medium
Phone	Electrical	Cannot start generator after electrical failure	Closed	2020-02-27T22:28:20.000Z	000000018	Medium

How can the developer configure the FlexCard to display the case records in this way?

- A. Select the Repeatable Mode property on the data table elements
- B. Disable the Repeat Record feature on the FlexCard setup tab
- C. Enable the record Looping feature on the data table elements
- D. Enable the Repeat Records feature on the FlexCard Setup tab

Answer: A

Explanation:

The Repeatable Mode property on the data table elements allows the developer to display multiple records in a single data table. The Repeat Records feature on the FlexCard Setup tab is used to display multiple FlexCards for each record in a data source. The Record Looping feature on the data table elements is used to iterate over a list of records and perform actions on each record. The Overwrite Target for all Null input checkbox on the Account id field is used to overwrite the existing value in the target object with null if the input value is null.

NEW QUESTION # 125

A developer creates a new FlexCard to display customer data and actions, such as updating billing information and changing the contact for the customer account. The FlexCard contains 10 fields and 5 actions.

During testing, several fields display with the correct data, but one of the fields shows only the label.

What could cause this?

- A. {recordId} is misspelled in the Data Source Input Map.
- B. There are no test parameters configured.
- C. The fields have exceeded the maximum number allowed on the card.
- D. The field is null on the Salesforce record.

Answer: D

Explanation:

According to the FlexCard Designer Overview page, another possible cause of a field showing only the label is that "the field is null on the Salesforce record".

NEW QUESTION # 126

A healthcare company wants to enable its subscribers to add, edit, or delete dependents related to their policy Community portal. The developer on the project decides to use an MiniScript.

How should the developer configure the OmniScript to provide this functionality?

- A. Use an Edit Block element configured with SOQL statements.
- B. Use an Input Block element and a DataRaptor Post Action element.
- **C. Use an Edit Block element configured with Remote Actions.**
- D. Use a Text Block element and a Remote Action element.

Answer: C

Explanation:

An Edit Block element configured with Remote Actions allows the developer to create a dynamic table that can display, add, edit, or delete records from a Salesforce object. The Remote Actions can be configured to perform CRUD operations on the object using SOQL or Apex.

NEW QUESTION # 127

A developer creates a DataRaptor Extract to retrieve data to pass to an external service. The external service expects the field value to be an integer. However, the DataRaptor is sending it as a string. Which action can the developer take to fix this?

- A. In the DataRaptor Output tab, select the Output Data Type of that field to Integer.
- **B. In the DataRaptor Formula tab, define a formula using the function TOINTEGER and use the formula as output.**
- C. In the DataRaptor Output tab, enter the default value as 0 on the field.
- D. In the DataRaptor Extract tab, set the Input Data Type field to Integer.

Answer: B

Explanation:

The DataRaptor Formula tab allows the developer to define formulas using functions and operators to manipulate data. The TOINTEGER function converts a string value to an integer value. The developer can use this function to output the field value as an integer and use the formula as output

NEW QUESTION # 128

A developer wants an Integration Procedure to return different responses based on incoming input values. Which element should be used to control this branching logic?

- A. Formula Action
- B. Loop Block
- **C. Conditional Block**
- D. Response Action

Answer: C

Explanation:

A Conditional Block in an Integration Procedure allows the developer to group actions that execute only when a specified condition is met, enabling branching logic based on input values.

NEW QUESTION # 129

.....

Hundreds of candidates want to get the Salesforce Certified Omnistudio Developer (Plat-Dev-210) certification exam because it helps them in accelerating their Salesforce careers. Cracking the Plat-Dev-210 exam of this credential is vital when it comes to the up gradation of their resume.
