AZ-305 Free: Designing Microsoft Azure Infrastructure Solutions

BONUS!!! Download part of PremiumVCEDump AZ-305 dumps for free: <https://drive.google.com/open?id=11vrsTYUrnigLXRdjXITNXsqwPcjhkemk>

The PremiumVCEDump Microsoft AZ-305 exam dumps are ready for quick download. Just choose the right PremiumVCEDump Microsoft AZ-305 exam questions format and download it after paying an affordable PremiumVCEDump Designing Microsoft Azure Infrastructure Solutions (AZ-305) practice questions charge and start this journey. Best of luck in Microsoft AZ-305 exam and career!!!

Valid Designing Microsoft Azure Infrastructure Solutions AZ-305 test dumps demo and latest test preparation for customer's success. Microsoft offers latest Designing Microsoft Azure Infrastructure Solutions exam and valid practice questions book to help you pass the Designing Microsoft Azure Infrastructure Solutions AZ-305 Exam in your field. The Designing Microsoft Azure Infrastructure Solutions exam is 365 days updates and true. New AZ-305 study questions pdf in less time. And Designing Microsoft Azure Infrastructure Solutions AZ-305 price is benefit!

Free 1 year Microsoft AZ-305 Dumps Updates

PremiumVCEDump's training product for Microsoft certification AZ-305 exam includes simulation test and the current examination. On Internet you can also see a few websites to provide you the relevant training, but after compare them with us, you will find that PremiumVCEDump's training about Microsoft Certification AZ-305 Exam not only have more pertinence for the exam and higher quality, but also more comprehensive content.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q326-Q331):

NEW QUESTION # 326

You have a network-attached storage device that hosts a file share. The share contains 1 TB of JSON files.

You have an Azure subscription that contains a storage account named storage1. storage1 has hierarchical namespace enabled.

You need to recommend a solution to migrate the files to storage1.

What should you include in the recommendation?

- A. Robocopy

- B. AzCopy
- C. Azure File Sync
- D. **Azure Storage Mover**

Answer: D

Explanation:

Azure Storage Mover is a fully managed, hybrid migration service designed to move on-premises file shares to Azure Blob Storage and Azure Files. It simplifies the process of migrating large volumes of data by automating the transfer and supporting various source types.

You can use Storage Mover for different migration scenarios such as lift-and-shift, and for migrations that you have to repeat regularly. Azure Storage Mover also helps maintain oversight and manage the migration of all your globally distributed file shares from a single storage mover resource.

Supported sources and targets

The current Azure Storage Mover release supports full-fidelity migrations for specific source- target pair combinations. Always utilize the latest agent version to benefit from these supported sources and destinations:

- * SMB 2.x mount

Azure file share (SMB)

SMB 1.x sources and NFS Azure file shares are currently not supported.

- *-> NFS 3 & 4 mount

Azure blob storage container

Containers with the "Hierarchical Namespace Service (HNS)" feature enabled, are supported and the ADLS Gen2 REST API set is used for migration.

<https://docs.azure.cn/en-us/storage/common/storage-ref-azcopy-sync>

<https://learn.microsoft.com/en-us/azure/storage-mover/service-overview>

NEW QUESTION # 327

You are designing an application that will use Azure Linux virtual machines to analyze video files. The files will be uploaded from corporate offices that connect to Azure by using ExpressRoute.

You plan to provision an Azure Storage account to host the files.

You need to ensure that the storage account meets the following requirements:

- * Supports video files of up to 7 TB
- * Provides the highest availability possible
- * Ensures that storage is optimized for the large video files
- * Ensures that files from the on-premises network are uploaded by using ExpressRoute

How should you configure the storage account? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area
Microsoft

Storage account type:

- Premium file shares
- Premium page blobs
- Standard general-purpose v2

Data redundancy:

- Geo-redundant storage (GRS)
- Locally redundant storage (LRS)
- Zone-redundant storage (ZRS)

These are the selections for Data redundancy

Networking:

- Azure Route Server
- A private endpoint
- A service endpoint

Answer:

Explanation:

Storage account type:

| |
|-----------------------------|
| Premium file shares |
| Premium page blobs |
| Standard general-purpose v2 |

Data redundancy:

| |
|---------------------------------|
| Geo-redundant storage (GRS) |
| Locally-redundant storage (LRS) |
| Zone-redundant storage (ZRS) |

Networking:

| |
|--------------------|
| Azure Route Server |
| A private endpoint |
| A service endpoint |

These are the selections for Data redundancy

NEW QUESTION # 328

You have an Azure subscription that contains the resources shown in the following table.

| Name | Type | Description |
|-------------|-------------------------|---|
| contoso.com | Azure Private DNS zone | None |
| VNet1 | Virtual network | Linked to contoso.com Peered with VNet2 |
| VNet2 | Virtual network | Linked to contoso.com Peered with VNet1 |
| VNet3 | Virtual network | Linked to contoso.com Isolated from VNet1 and VNet2 |
| Workspace1 | Log Analytics workspace | Stores logs collected from the virtual machines on all the virtual networks |

VNet1, VNet2, and VNet3 each has multiple virtual machines connected. The virtual machines use the Azure DNS service for name resolution.

You need to recommend an Azure Monitor log routing solution that meets the following requirements:

- * Ensures that the logs collected from the virtual machines and sent to Workspace1 are routed over the Microsoft backbone network
- * Minimizes administrative effort

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Minimum number of Azure Monitor Private Link Scope (AMPLS) objects:

Minimum number of private endpoints:

Answer:

Explanation:

Answer Area

Minimum number of Azure Monitor Private Link Scope (AMPLS) objects:

Minimum number of private endpoints:

NEW QUESTION # 329

You store web access logs data in Azure Blob storage.

You plan to generate monthly reports from the access logs.

You need to recommend an automated process to upload the data to Azure SQL Database every month. What should you include in the recommendation?

- A. Microsoft SQL Server Migration Assistant (SSMA)
- B. Data Migration Assistant
- **C. Azure Data Factory**
- D. AzCopy

Answer: C

Explanation:

Explanation

Azure Data Factory is the platform that solves such data scenarios. It is the cloud-based ETL and data integration service that allows you to create data-driven workflows for orchestrating data movement and transforming data at scale. Using Azure Data Factory, you can create and schedule data-driven workflows (called pipelines) that can ingest data from disparate data stores. You can build complex ETL processes that transform data visually with data flows or by using compute services such as Azure HDInsight Hadoop, Azure Databricks, and Azure SQL Database.

NEW QUESTION # 330

You plan to create an Azure Storage account that will host file shares. The shares will be accessed from on-premises applications that are transaction-intensive.

You need to recommend a solution to minimize latency when accessing the file shares. The solution must provide the highest-level of resiliency for the selected storage tier.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
