

AWS-Solutions-Architect-Professional Exam Torrent– Fantastic AWS-Solutions-Architect-Professional Exam Overviews Pass Success

What's more, part of that 2Pass4sure AWS-Solutions-Architect-Professional dumps now are free: <https://drive.google.com/open?id=1YBnGYyQ05aU84UnB4kuLWYHsWnmGO9>

Obtaining this AWS-Solutions-Architect-Professional certificate is not an easy task, especially for those who are busy every day. However, if you use our AWS-Solutions-Architect-Professional exam torrent, we will provide you with a comprehensive service to overcome your difficulties and effectively improve your ability. If you can take the time to learn about our AWS-Solutions-Architect-Professional Quiz prep, I believe you will be interested in our AWS-Solutions-Architect-Professional exam questions. Our AWS-Solutions-Architect-Professional learning materials are practically tested, choosing our AWS-Solutions-Architect-Professional exam guide, you will get unexpected surprise.

The AWS Certified Solutions Architect – Professional exam is an industry-leading certification that validates the skills and expertise of professionals in designing and deploying AWS solutions. AWS Certified Solutions Architect - Professional certification is highly valued by employers and can open up new career opportunities for professionals in the cloud computing industry. AWS Certified Solutions Architect - Professional certification also demonstrates a commitment to ongoing learning and development, which is essential in today's fast-paced technology landscape.

Amazon AWS-Solutions-Architect-Professional (AWS Certified Solutions Architect - Professional) exam is a certification program designed for IT professionals who want to validate their skills and expertise in designing and deploying AWS architectures. AWS-Solutions-Architect-Professional exam is intended for individuals who have already completed the AWS Certified Solutions Architect - Associate certification, and have at least two years of experience in designing and deploying AWS architectures.

Beware! Get Real Amazon AWS-Solutions-Architect-Professional Dumps for Easy Exam Prep

It is very convenient for all people to use the AWS-Solutions-Architect-Professional study materials from our company. Our study materials will help a lot of people to solve many problems if they buy our products. The online version of AWS-Solutions-Architect-Professional study materials from our company is not limited to any equipment, which means you can apply our study materials to all electronic equipment, including the telephone, computer and so on. So the online version of the AWS-Solutions-Architect-Professional Study Materials from our company will be very useful for you to prepare for your exam. We believe that our study materials will be a good choice for you.

The AWS Certified Solutions Architect - Professional certification exam is a challenging exam that requires extensive preparation and study. Candidates are encouraged to review the AWS exam guide, which provides detailed information on the exam structure, content, and scoring. Additionally, AWS offers a range of training and certification resources, including classroom training, online

courses, and practice exams, to help candidates prepare for the exam. By passing the AWS Certified Solutions Architect - Professional certification exam, IT professionals can demonstrate their expertise in designing and deploying highly available and scalable applications on the AWS platform, and enhance their career prospects in the field of cloud computing.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q100-Q105):

NEW QUESTION # 100

A retail company has a custom NET web application running on AWS that uses Microsoft SQL Server for the database. The application servers maintain a user's session locally.

Which combination of architecture changes are needed to ensure all tiers of the solution are highly available? (Select THREE.)

- A. Migrate the database to Amazon RDS for SQL Server. Configure the RDS instance to use a Multi-AZ deployment.
- B. Put the application instances in an Auto Scaling group. Configure the Auto Scaling group to create new instances if an instance becomes unhealthy.
- C. Deploy Amazon CloudFront in front of the application tier. Configure CloudFront to serve content from healthy application instances only.
- D. Refactor the application to store the user's session in Amazon ElastiCache. Use Application Load Balancers to distribute the load between application instances.
- E. Move the NET content to an Amazon S3 bucket. Configure the bucket for static website hosting.
- F. Set up the database to generate hourly snapshots using Amazon EBS. Configure an Amazon CloudWatch Events rule to launch a new database instance if the primary one fails.

Answer: A,B,D

NEW QUESTION # 101

You are designing a social media site and are considering how to mitigate distributed denial-of-service (DDoS) attacks. Which of the below are viable mitigation techniques? Choose 3 answers.

- A. Use Dedicated Instances to ensure that each Instance has the maximum performance possible.
- B. Add alerts to Amazon CloudWatch to look for high Network In and CPU utilization.
- C. Add multiple elastic network Interfaces (ENIs) to each EC2 instance to increase the network bandwidth.
- D. Use an Amazon CloudFront distribution for both static and dynamic content.
- E. Use an Elastic Load Balancer with auto scaling groups at the web, app, and Amazon Relational Database Service (RDS) tiers.
- F. Create processes and capabilities to quickly add and remove rules to the instance OS firewall.

Answer: B,D,E

NEW QUESTION # 102

Which system is used by Amazon Machine Images for paravirtual (PV) virtualization during the boot process?

- A. PV-WORM
- B. PV-GRUB
- C. PV-AMI
- D. PV-BOOT

Answer: B

Explanation:

Explanation

Amazon Machine Images that use paravirtual (PV) virtualization use a system called PV-GRUB during the boot process. PV-GRUB is a paravirtual boot loader that runs a patched version of GNU GRUB 0.97. When you start an instance, PV-GRUB starts the boot process and then chain loads the kernel specified by your image's menu.lst file.

NEW QUESTION # 103

A company is using AWS CloudFormation as its deployment tool for all application. It stages all application binaries and templates within Amazon S3 bucket with versioning enable. Developers have access to an Amazon EC2 instance that hosts the integrated development (IDE). The developers download the application binaries from Amazon S3 to the EC2 instance, make changes, and upload the binaries to an S3 bucket after running the unit locally. The developers want to improve the existing deployment mechanism and implement Ci/CD using AWS CodePipeline.

The developers have the following requirements:

Use AWS CodeCommit for source control

Automate unit testing and security scanning.

Alert the developers when unit tests fail

Turn application features on and off, and customize deployment dynamically as part of Ci/CD.

Have the lead developer provide approval before deploying an application.

Which solution will meet these requirements?

- A. Use AWS CodeDeploy to run unit tests and security scans. Use an Amazon CloudWatch alarm in the pipeline to send Amazon SNS alerts to the developers when unit tests fail. Use Docker images for different solution features and the AWS CLI to turn features on and off. Use a manual approval stage in the pipeline to allow the lead developer to approve applications.
- B. Use AWS CodeBuild to run unit test and security scans. use Lambda in a subsequent stage in the pipeline to send Amazon SNS alerts to the developers when tests fail. Write Amplify plugins for different solution features and utilize user prompts to turn features on and off. Use Amazon SES in the pipeline to allow the lead developer to approve applications.
- C. Use Jenkins to run unit tests and security scans. Use an Amazon EventBridge rule in the pipeline to send Amazon SES alerts to the developers when unit tests fail. Use AWS CloudFormation nested stacks for different solution features and parameters to turn features on and off. Use AWS Lambda in the pipeline to allow the lead developer to approve applications.
- **D. Use AWS CodeBuild to run tests and security scans. Use an Amazon EventBridge rule to send Amazon SNS alerts to the developers when unit test fail. Write AWS Cloud Developer kit (AWS CDK) constructs for different solution features, and use a manifest file to turn on and off in the AWS application. Use a manual improve stage in the pipeline to allow the lead developer to approve applications.**

Answer: D

NEW QUESTION # 104

An international company has deployed a multi-tier web application that relies on DynamoDB in a single region. For regulatory reasons they need disaster recovery capability in a separate region with a Recovery Time Objective of 2 hours and a Recovery Point Objective of 24 hours. They should synchronize their data on a regular basis and be able to provision the web application rapidly using CloudFormation.

The objective is to minimize changes to the existing web application, control the throughput of DynamoDB used for the synchronization of data, and synchronize only the modified elements.

Which design would you choose to meet these requirements?

- A. Send also each write into an SQS queue in the second region, use an auto-scaling group behind the SQS queue to replay the write in the second region
- **B. Use AWS Data Pipeline to schedule a DynamoDB cross region copy once a day, create a "LastUpdated" attribute in your DynamoDB table that would represent the timestamp of the last update and use it as a filter**
- C. Use AWS Data Pipeline to schedule an export of the DynamoDB table to S3 in the current region once a day, then schedule another task Immediately after it that will import data from S3 to DynamoDB in the other region
- D. Use EMR and write a custom script to retrieve data from DynamoDB in the current region using a SCAN operation and push it to DynamoDB in the second region

Answer: B

Explanation:

B: No Schedule and throughput control

C: With AWS Data pipeline the data can be copied directly to other DynamoDB table D: Not Automated to replay the write
