IAPP Certified Information Privacy Manager (CIPM) Sample Questions (Q117-Q122):

NEW QUESTION # 117

Read the following steps:

- * Perform frequent data back-ups.
- * Perform test restorations to verify integrity of backed-up data.
- * Maintain backed-up data offline or on separate servers.

These steps can help an organization recover from what?

- A. Phishing attacks
- B. Authorization errors
- C. Ransomware attacks
- D. Stolen encryption keys

Answer: C

Explanation:

Explanation

The steps of performing frequent data back-ups, performing test restorations to verify integrity of backed-up data, and maintaining backed-up data offline or on separate servers can help an organization recover from ransomware attacks. Ransomware is a type of malicious software that encrypts the victim's data and demands a ransom for the decryption key. Ransomware attacks can cause significant disruption, damage, and financial losses to an organization, as well as compromise the confidentiality, integrity, and availability of personal information. Having a reliable and secure backup system can help an organization restore its data and resume its operations without paying the ransom or losing valuable information.

NEW QUESTION # 118

K a privacy professional wants to show that an organization's privacy program is working as intended, the professional should?

- A. Review privacy policies.
- B. Collect feedback from customers about the privacy program.
- C. Carry out a personal data breach tabletop exercise.
- D. Collect and analyze privacy program metrics.

Answer: B

NEW QUESTION # 119

SCENARIO

Please use the following to answer the next QUESTION:

It's just what you were afraid of. Without consulting you, the information technology director at your organization launched a new initiative to encourage employees to use personal devices for conducting business. The initiative made purchasing a new, high-

specification laptop computer an attractive option, with discounted laptops paid for as a payroll deduction spread over a year of paychecks. The organization is also paying the sales taxes. It's a great deal, and after a month, more than half the organization's employees have signed on and acquired new laptops. Walking through the facility, you see them happily customizing and comparing notes on their new computers, and at the end of the day, most take their laptops with them, potentially carrying personal data to their homes or other unknown locations. It's enough to give you data- protection nightmares, and you've pointed out to the information technology Director and many others in the organization the potential hazards of this new practice, including the inevitability of eventual data loss or theft.

Today you have in your office a representative of the organization's marketing department who shares with you, reluctantly, a story with potentially serious consequences. The night before, straight from work, with laptop in hand, he went to the Bull and Horn Pub to play billiards with his friends. A fine night of sport and socializing began, with the laptop "safely" tucked on a bench, beneath his jacket. Later that night, when it was time to depart, he retrieved the jacket, but the laptop was gone. It was not beneath the bench or on another bench nearby. The waitstaff had not seen it. His friends were not playing a joke on him. After a sleepless night, he confirmed it this morning, stopping by the pub to talk to the cleanup crew. They had not found it. The laptop was missing. Stolen, it seems. He looks at you, embarrassed and upset.

You ask him if the laptop contains any personal data from clients, and, sadly, he nods his head, yes. He believes it contains files on about 100 clients, including names, addresses and governmental identification numbers. He sighs and places his head in his hands in despair.

In order to determine the best course of action, how should this incident most productively be viewed?

- A. As the accidental loss of personal property containing data that must be restored.
- B. As the premeditated theft of company data, until shown otherwise.
- C. As an incident that requires the abrupt initiation of a notification campaign.
- **D. As a potential compromise of personal information through unauthorized access.**

Answer: D

NEW QUESTION # 120

All of the following changes will likely trigger a data inventory update EXCEPT?

- A. Onboarding of a new vendor.
- **B. Passage of a new privacy regulation.**
- C. Outsourcing the Customer Relationship Management (CRM) function.
- D. Acquisition of a new subsidiary.

Answer: B

Explanation:

Explanation

All of the changes listed will likely trigger a data inventory update except for the passage of a new privacy regulation. A data inventory is a record of all personal data that an organization collects, processes, stores, shares, or disposes of. A data inventory helps an organization understand what types of personal data it holds, where it comes from, where it goes, and how it is protected. A data inventory should be updated regularly to reflect any changes in the organization's data processing activities or practices. Some examples of changes that would trigger a data inventory update are outsourcing a business function, acquiring a new subsidiary, or onboarding a new vendor. These changes may involve new sources or destinations of personal data, new purposes or categories of processing, new security measures or risks, or new contractual agreements or obligations. The passage of a new privacy regulation may not trigger a data inventory update unless it affects the organization's existing data processing activities or practices. However, it may trigger a compliance assessment or gap analysis to determine if the organization needs to make any adjustments to its privacy program or policies to meet the new legal requirements. NEW QUESTION # 121

"Respond" in the privacy operational lifecycle includes which of the following?

- A. Information security practices and functional area integration.
- B. Privacy awareness training and compliance monitoring.
- **C. Information requests and privacy rights requests.**
- D. Communication to stakeholders and alignment to laws.

Answer: C
