What is the key idea behind the "flow" component of Nissenbaum's contextual integrity model?

- A. The movement of personal information within a particular context or domain.
- B. The flow of information from one actor to another.
- C. The integrity of information during each stage of the data lifecycle.
- D. The maintenance of accuracy when personal information is transmitted.

答案: A

解題說明:

The "flow" component of Nissenbaum's contextual integrity model refers to how personal information moves within a particular context or domain. This model emphasizes that privacy is maintained when information flows according to norms appropriate to that context. For example, health information shared between a patient and doctor should not be shared outside the medical context without consent.
